This report on the foreign operations of United States corporations was prepared under the direction of Norman Adler, Chief, Assets Research Staff, in the Income, Finance, and Wealth Branch. Important contributions were made by Murl D. Harmon, Paul Rose, and other members of the Assets Research Staff.

Other branches of the Statistics Division assisted in the development of the sample design, the processing procedures, and the computer system, and in the post-tabulation review of the data. Statistical and computer processing of the data was conducted by the service centers at Chamblee, Georgia; Kansas City, Missouri; Lawrence, Massachusetts; Philadelphia, Pennsylvania; and Ogden, Utah.

Letter of Transmittal

Treasury Department,
Office of Commissioner of Internal Revenue,
Washington, D. C., August 6, 1969.

Dear Mr. Secretary:

I am transmitting *Statistics of Income--1962, Supplemental Report on Foreign Income and Taxes Reported on Corporation Income Tax Returns* with accounting periods ended July 1962 through June 1963. This report was prepared in partial fulfillment of the requirements of section 6108 of the Internal Revenue Code of 1954, which provides that statistics be published with respect to the operation of the income tax laws.

This report presents the most comprehensive set of statistics we have published on the foreign operations of United States corporations. For the first time statistics on controlled foreign corporations are presented. The major feature of the report is the classification of the data by country and geographic area. Since the data were obtained from returns filed for 1962, they do not reflect the extensive changes in the taxation of income earned abroad introduced by the Revenue Act of 1962.

The first major set of tables on the foreign income and taxes of domestic corporations is based on the information reported in the Form 1118 filed in support of foreign tax credit claimed. The second major set of tables on foreign income and taxes is based on the Form 2952, "Information Return by a Domestic Corporation with Respect to Controlled Foreign Corporations," which was required to be filed for each controlled foreign corporation and for the foreign subsidiaries of these controlled foreign corporations. Of particular interest in the controlled foreign corporation tables is the classification of the data by: (1) the industrial activity of both the domestic and the foreign corporation, and (2) both the foreign country under whose laws the foreign corporation was incorporated and the foreign country in which it had its principal place of business.

The report also includes summary information for corporations taking the Western Hemisphere trade corporation deduction and for all corporations reporting the ownership of stock in foreign corporations.

/s/ Randolph W. Thrower

Commissioner of Internal Revenue.

Hon. David M. Kennedy,
Secretary of the Treasury.

Introduction

INTRODUCTION

This report presents data on four different topics, each with its own set of tables, derived from the returns and schedules filed by corporations with accounting periods ended July 1962 through June 1963. These topics are interrelated since all four pertain to the international operations of domestic corporations. The statistics on these topics come from three different sources: (1) Form 1120, "U. S. Corporation Income Tax Return," (2) Form 1118, "Statement in Support of Credit Claimed by Domestic Corporation for Taxes Paid or Accrued to Foreign Countries or Possessions of the United States," and (3) Form 2952, "Information Return by a Domestic Corporation with Respect to Controlled Foreign Corporations."

INFORMATION PRESENTED IN THIS SUPPLEMENTAL REPORT

The regular annual series of *Statistics of Income--Corporation Income Tax Returns* reports provide three items of data, reported on the Form 1120, which relate to the foreign activity of United States corporations: (1) foreign dividends, (2) Western Hemisphere trade corporation deduction, and (3) foreign tax credit claimed. In this supplemental report, detailed statistics are presented on the foreign operations of United States corporations as reported on Form 1118 and Form 2952.

The major feature of this report is the data on the geographic location of United States corporate operations abroad. Information presented in the Foreign Tax Credit and the Western Hemisphere Trade Corporation Returns sections follows the pattern of the 1961 Supplemental report. However, the data obtained from the Form 2952 on foreign corporations controlled by United States corporations is being presented for the first time in a *Statistics of Income* report. Of particular interest in this section is the classification of the data by (1) the industrial activity of both the domestic and foreign corporations and (2) both the country under whose laws the foreign corporation was incorporated and where it had its principal place of business. Also new in this report is the section on Corporation Returns with Foreign Corporation Stock. The table below shows how the data presented in each of the four sets of tables are classified.

CLASSIFICATION OF STATISTICS APPEARING IN THIS REPORT

Classification	Tables on –			
	Foreign tax credit	Corporations with foreign stock	Controlled foreign corporations	Western Hemisphere trade corporation returns
DOMESTIC CORPORATIONS

SUMMARY HIGHLIGHTS

The charts on the following pages highlight major aspects of the information contained in this report:

- Growth of foreign operations of U. S. Corporations and the significance of large corporations;
- Industrial activity of domestic corporations operating abroad, 1954 and 1962;
- Classification of the activity of foreign corporations controlled by U. S. corporations by both the industry of the U. S. corporation and the industry of the foreign corporation;
- Countries accounting for major share of foreign earnings of U. S. corporations;
- Form of foreign operations of U. S. corporations, with statistics for eight countries accounting for about two-thirds of foreign earnings.

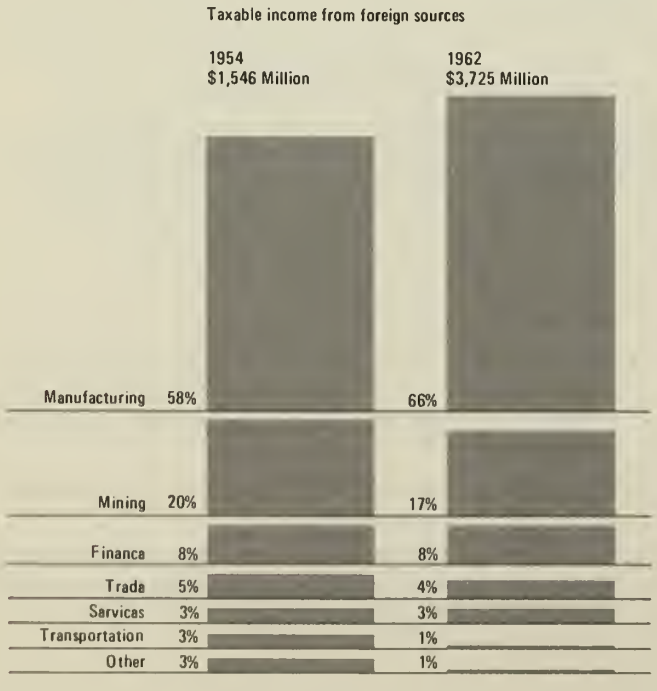

U. S. corporations continued to expand international operations with large corporations accounting for about 90% of foreign income

The foreign income portion of total U. S. corporate income rose considerably from 1954 to 1962, increasing from 4.3 percent of the total to 7.5 percent

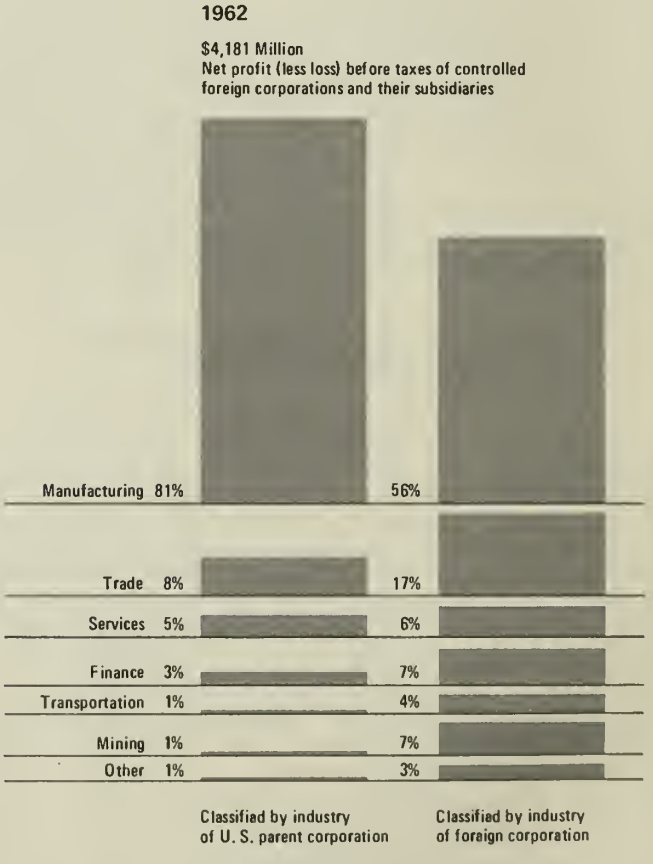

Source: Table 11

U.S. mining and manufacturing corporations continued to receive most of the foreign income

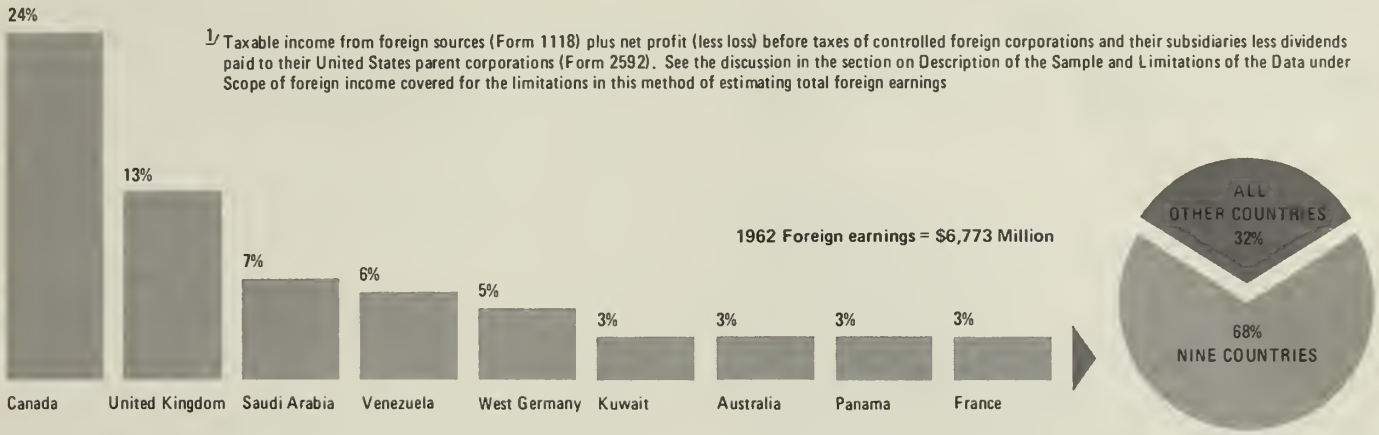

Source: Table 10

The industrial activity of foreign corporations controlled by U.S. corporations showed greater diversity when classified by the industry of the foreign corporation itself than when classified by the industry of the controlling U.S. corporation

Source: Table 18

Nine countries accounted for more than two thirds of the foreign earnings [1] of U.S. corporations

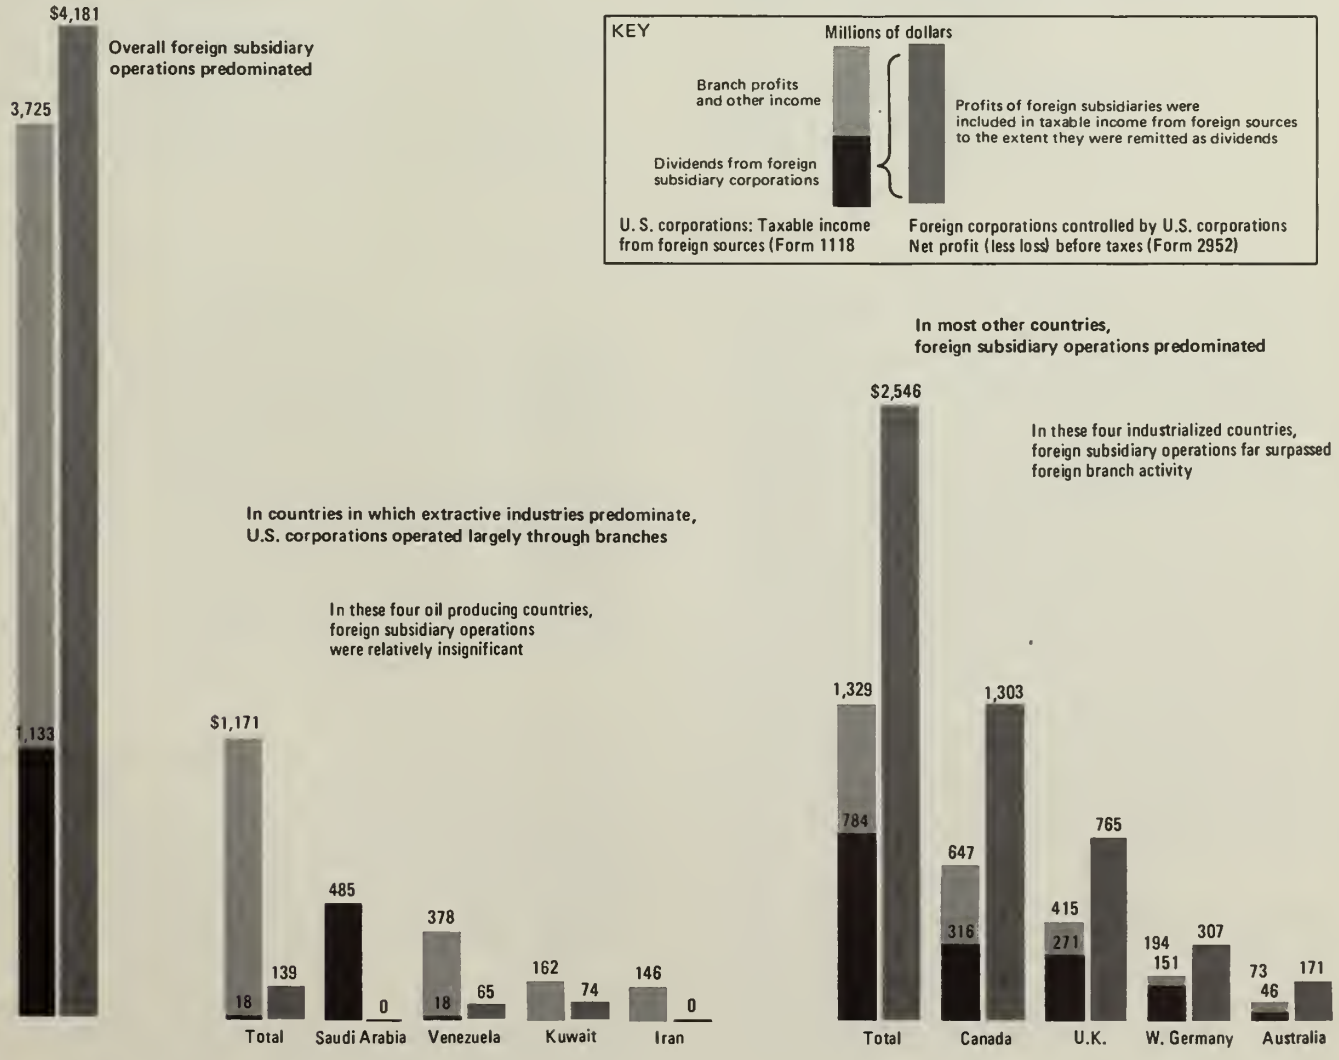

[1] Taxable income from foreign sources (Form 1118) plus net profit (less loss) before taxes of controlled foreign corporations and their subsidiaries less dividends paid to their United States parent corporations (Form 2592). See the discussion in the section on Description of the Sample and Limitations of the Data under Scope of foreign income covered for the limitations in this method of estimating total foreign earnings

Note: Figures do not add to 100 percent due to rounding

INTRODUCTION

Since the United States tax law generally imposes an income tax on income received from all sources, the income from without the country is subject to taxation by both the United States and the foreign country or United States possession in which income was earned. In order to alleviate the consequences of this double taxation, the Internal Revenue Code provides a credit against United States income tax or an alternative deduction from gross income for foreign taxes paid or accrued. Taxpayers usually choose the foreign tax credit rather than the deduction because this usually results in a lower combined total of United States and foreign taxes.

Foreign Taxes Eligible for the Foreign Tax Credit

A domestic corporation will generally incur a foreign tax by its operation of a foreign branch or through its investment in a foreign corporation. The following foreign taxes are creditable: (1) income, war profits, and excess profits taxes and (2) taxes in lieu of the income and profits taxes sometimes imposed under foreign law upon particular firms or industries.

A foreign tax must have "income" as its base, essentially as defined under the United States tax law, or must be predominantly an income tax, although in both cases the foreign law under which the tax was imposed need not be identical to the United States law in respect to determination of gross income, exemptions, and deductions.

A domestic corporation is generally allowed a credit for the amount of any income, war profits, and excess profits taxes paid or accrued during the taxable year to any foreign country or possession of the United States. However, the following types of domestic corporations are not allowed to credit foreign taxes: (1) China Trade Act Corporations entitled to the benefits of section 941 of the Code; (2) corporations which are entitled to the benefits of the exemption provided by section 931 for income from possessions of the United States (i.e., corporations which derive 80 percent or more of their gross income from sources within a United States possession, other than the Virgin Islands, and 50 percent or more of their gross income from the active conduct of a trade or business in such possessions for a specified period); and (3) regulated investment companies in any year in which they elect to pass on to their shareholders the credit for foreign taxes paid.

The foreign tax credit cannot be taken against three special taxes: (1) the section 531 tax relating to improper accumulation of earnings and profits, (2) the additional tax imposed by section 1333 because of war loss recoveries, and (3) the personal holding company tax imposed by section 541.

Limitations on the Foreign Tax Credit

The credit which may be taken in any year is limited so that the taxpayer pays the higher of the United States or foreign tax rate on his taxable income from foreign sources. Taxes additional to those paid to the foreign country are due under the Internal Revenue Code when the United States tax rate is higher than the foreign rate. This ceiling on the foreign tax credit assures that the credit will not reduce that portion of the taxpayer's tax actually attributable to income which had its source within the United States. Taxpayers can use one of two alternative limitations in computing the tax credit: (1) the per-country limitation and (2) the overall limitation. Under the per-country limitation, the credit is computed separately on the basis of the income derived from and taxes paid to each country or United States possession. Under the overall limitation, the credit is determined on the basis of the total amount of income earned from and taxes paid to all foreign countries and possessions. When the foreign taxes paid or accrued and the taxes deemed to have been paid exceed either limitation elected by the taxpayer, the excess tax may be carried back to the 2 preceding years and forward to the 5 succeeding years. Foreign taxes against which the limitation is compared consist of three components: taxes paid or accrued, taxes deemed to have been paid, and the tax carryover or carryback.

The per-country limitation is computed as follows:

$$\text{U. S. income tax before credits} \times \frac{\text{Taxable income from sources within the foreign country or United States possession}}{\text{Taxable income from all sources, foreign and domestic}}$$

The overall limitation is computed as follows:

$$\text{U. S. income tax before credits} \times \frac{\text{Taxable income from all foreign sources and United States possessions}}{\text{Taxable income from all sources, foreign and domestic}}$$

Corporations receive credit for foreign taxes paid or accrued, i.e., direct taxes on earnings in a foreign country. These are primarily taxes on branch profits and withholding taxes on dividends received from foreign corporations. In addition, a domestic corporation owning 10 percent or more of the voting stock of a foreign corporation (referred to as a "related foreign corporation") may also receive a credit for the taxes paid or accrued by the related foreign corporation on the earnings from which dividends were paid to the domestic corporation. Such taxes are "taxes deemed to have been paid" by the domestic corporation.

The domestic corporation may also receive a credit for a portion of the taxes paid by a subsidiary of the related foreign corporation with respect to dividends paid to the related foreign corporation. If the related foreign corporation owns 50 percent or more of another foreign corporation, it is deemed to have paid taxes through its subsidiary in a manner similar to that in which the domestic corporation is deemed to have paid taxes through the related foreign corporation. Amounts deemed paid by the related foreign corporation through its subsidiary are included in foreign taxes for the computation of taxes deemed paid by the domestic corporation (through the related foreign corporation). A step-by-step description of the entire computation for both the related foreign corporation and its subsidiary is provided under Taxes deemed paid in the Explanation of Terms.

Tax treaties with individual foreign countries may lessen the impact of double taxation either by exempting or reducing the tax on certain income, or by rendering creditable certain taxes which otherwise would be noncreditable. Some treaties contain provisions permitting a taxpayer to credit certain foreign taxes as if paid by the shareholders of foreign corporations, although under foreign tax law the taxes are imposed on the corporations. In certain situations, a larger credit may result when some taxes are treated as direct taxes (taxes paid or accrued) than if the taxes are deemed paid through the foreign corporation.

The two limitation methods represent an attempt to provide equitable treatment for two distinctly different kinds of situations and represent basically different concepts of the relationship between domestic and foreign income. Under the overall limitation, the taxpayer's income is divisible into two parts, domestic and foreign.

A foreign tax credit is allowed for foreign taxes up to the amount of the United States tax that would be imposed on the taxpayer's total foreign income. In effect, the high and low taxes of different foreign countries are averaged out, and the total foreign tax credit allowable for all foreign taxes may be higher than if the taxpayer were to use the per-country limitation. Thus total foreign taxes are less likely to exceed the credit allowable, whereas under the per-country limitation foreign taxes would exceed the credit allowable for those countries where the foreign tax rate exceeds the domestic rate.

On the other hand, the per-country limitation is preferable for taxpayers operating at a profit in some foreign countries and at a loss in others. This is especially likely when a domestic corporation begins operations in foreign countries in which losses are likely to result at least at the outset. In these instances, the domestic corporation would probably look at its operations in these countries as being separate from its more stable operations in other foreign countries. The per-country limitation permits the taxpayer to match high taxable income against high taxes in the same country and may therefore result in a higher total tax credit. Furthermore, under this limitation method, losses in certain countries would be ignored in computing the foreign tax credit, and the tax credit computed for the remaining countries would not be affected. Under these circumstances, the chances that foreign taxes will exceed the tax credit allowable are less than they might be under the overall limitation method (where losses are included in computing the foreign tax credit).

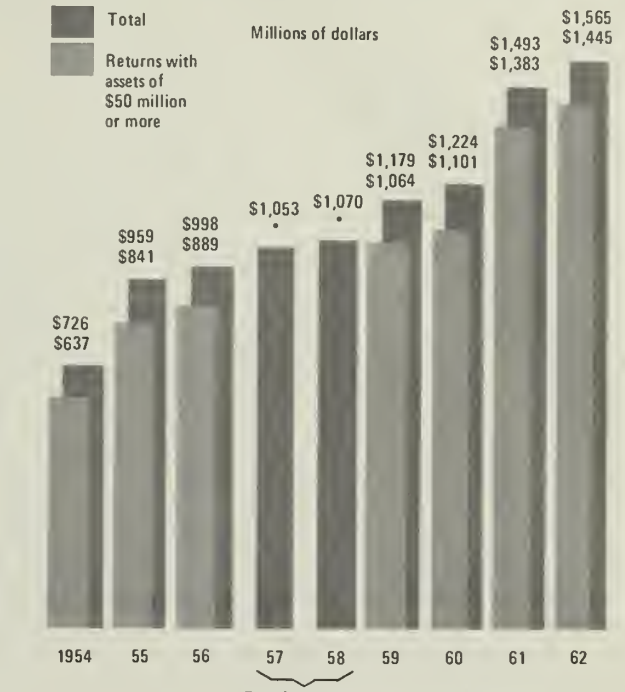

Under certain circumstances, the domestic corporation may obtain the benefits of the overall limitation when using the per-country limitation. If the domestic corporation conducts its foreign operations through a foreign subsidiary and elects to use the per-country limitation, all taxable income--including dividends from the related foreign corporation and subsidiaries of the related foreign corporation--and foreign taxes are attributed to the country in which the related foreign corporation is incorporated. Therefore, although the related foreign corporation or its subsidiary may be conducting business operations and receiving dividends on investments in several countries, all of the taxable income and foreign taxes are attributed to one country. This results in an averaging of the tax rates

of the countries in which income was earned and taxes were paid.

The carryover and carryback provisions of the law enable the taxpayer to obtain credit for taxes which could not otherwise be credited because of the above limitations. Although foreign taxes for which credit was not allowable because of the credit limitation may be carried back 2 years and forward 5 years, they cannot be carried from a year in which the overall limitation applies and used in a year in which the per-country limitation applies, and vice versa.

One of the primary reasons for the carryback and carryover provisions is the variation between United States and foreign tax law concepts regarding the precise year in which certain income or deductions should be reflected in taxable income. Since taxable income for purposes of computing the tax credit limitation is determined by domestic law, and foreign taxes are based on the taxable income determined by foreign law, the limitation on creditable taxes for any one year may be less than the foreign taxes paid or accrued for that year solely because of the difference in tax concepts. However, in another year the credit available could exceed the foreign taxes paid or accrued for that year. The 8-year timespan provided by the carryback and carryover enables the taxpayer to relate foreign taxes paid or accrued with the limitation on creditable taxes in a more equitable manner than the use of only a single taxable year allows.

Chart 2A. Amount of foreign tax credit claimed, 1954 - 1962

SUMMARY OF THE DATA

The growth of foreign investment by American corporations is reflected in the data in the *Statistics of Income--Corporation Income Tax Returns* reports pertaining to the foreign tax credit. Over the 9-year period 1954 through 1962, the number of corporations claiming the credit rose by two-thirds from 3,215 to 5,266. In 1962, returns with foreign tax credit accounted for $12.9 billion out of a $23.9 billion tax liability before credits on all corporation returns. The amount of foreign tax credit claimed was $1.6 billion, or 12 percent of the total tax liability of corporations with foreign tax credit.

Chart 2A shows that the credit claimed on corporation tax returns more than doubled during the period 1954 through 1962. During this same period, the value of private United States investments abroad likewise grew substantially--Department of Commerce statistics show that the book value of direct private investments abroad increased from $17.6 billion[1] to $37.1 billion.[2] A large part of the foreign tax credit was claimed by a relatively small number of large domestic corporations, reflecting the fact that the larger the corporation, the more likely it is to have foreign investments or foreign business activity. About 90 percent of the total foreign tax credit claimed by corporations each year from 1954 through 1962 has been claimed on the 440 to 730 returns with total assets of $50 million or more. For 1962, the large corporations, which comprised 14 percent of the total number with a foreign tax credit, accounted for over 92 percent of the total credit claimed.

[2] Department of Commerce, *Survey of Current Business*, August 1963, p. 18.

Role of Large Domestic Corporations and Country of Foreign Operations

The predominant role played by large domestic corporations in foreign operations is clearly shown in the statistics obtained from the foreign tax credit statements (Forms 1118) filed with 4,681 of the 5,266 returns with foreign tax credit. For example, chart 2B shows that the United States taxable income from foreign sources reported by the 711 domestic corporations with total assets of $50 million or more amounted to $3,376,072,000, or 91 percent of all United States taxable income from foreign sources. Although net income as an indicator of size is more volatile from year to year than total assets because the same firms are less likely to be represented

Chart 2B. U.S. taxable income from foreign sources, by asset size, 1962

in the same net income class each year than in the same assets class, distributions by size of net income also show the importance of large firms in foreign operations. For example, the 27 firms reporting net income of $100 million or more in 1962 reported 53 percent of the total taxable income from foreign sources (table 3).

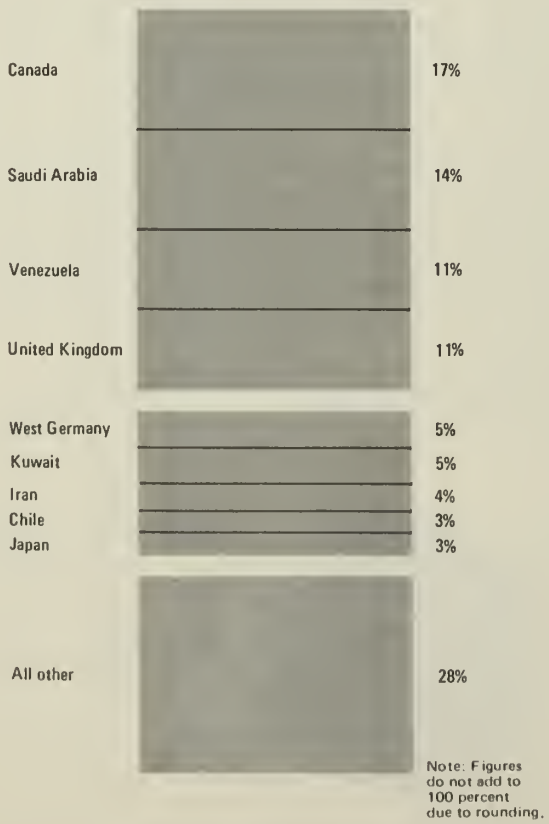

Many of the large corporations reported income and taxes from worldwide operations. As a result of the growth of international trade and investment, there has been an increasing number of multi-national enterprises--enterprises incorporated in one country and with subsidiaries and branches located in many other countries. Consequently, some part of the income and taxes reported by United States corporations in their foreign tax credit supporting statements for a particular country may have originated from sales in, and taxes paid to, other countries in which the domestic corporation had business operations. This is discussed further below in Limitations of the data under Country classification.

Chart 2C shows the countries accounting for 3 percent or more of the total taxable income from foreign sources reported by the large domestic corporations. As in 1961, only four countries--Canada, Saudi Arabia, Venezuela, and the United Kingdom--accounted for over one-half of the total foreign taxable income reported by large firms. Another one-fifth of the foreign taxable income of these large firms was derived from operations in West Germany, Kuwait, Iran, Chile, and Japan. With the exception of a substitution of Chile for Australia, these were the same countries in the same order of magnitude as for 1961. The remaining one-quarter of foreign taxable income came from over 90 other countries. The distribution of private United States investment abroad indicates a similar pattern. Commerce Department figures show that 56 percent of the value of direct private investment was located in Canada and Western Europe at the end of 1962, with the remainder heavily concentrated in the oil producing countries of the Middle East and Venezuela. Actually, about 46 percent of the investment in areas outside Canada and Western Europe was devoted to petroleum operations at the end of 1962.[3]

The percentage shares of taxable income from foreign sources for each of the geographic areas into which the countries are grouped were virtually the same for 1962 as for 1961. In comparing the geographic area categories, the following change in country classification should be noted: Jamaica and Trinidad, which were part of Latin America in 1962, were included in Other Western Hemisphere in 1961. For further detail, see the discussion under Geographical classification: area or country, in Explanation of Terms.

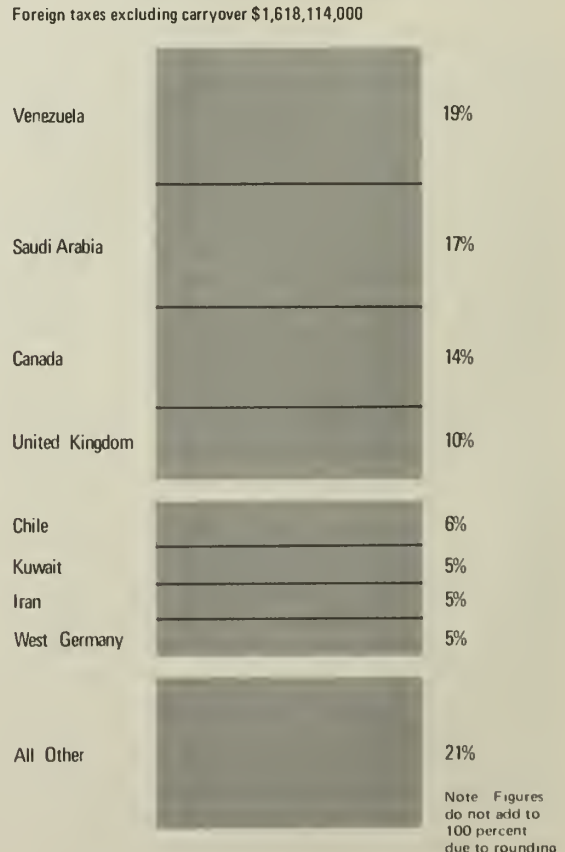

Returns with assets of $50 million or more

Chart 2C. Countries accounting for 3 percent or more of the taxable income from foreign sources, 1962

Returns with assets of $50 million or more

Chart 2D. Countries accounting for 5 percent or more of the foreign taxes excluding carryover, 1962

[3] Ibid.

Chart 2D shows the countries accounting for 5 percent or more of the total foreign taxes excluding carryover reported by corporations with assets of $50 million or more. These corporations reported $1,618,114,000, or 92 percent of the total foreign taxes excluding carryover of all corporations. Four countries--Venezuela, Saudi Arabia, Canada, and the United Kingdom--accounted for about three-fifths of the total foreign taxes reported by large firms. Another one-fifth of the foreign taxes of these firms was attributable to Chile, Kuwait, Iran, and West Germany; the remaining one-fifth, to the other 90 countries. Japan, which ranked among the countries in which the highest taxable income was earned, was not among the above eight countries. Generally, in Japan the number of taxes was fewer, the statutory tax rates were lower, and there were more special allowances (accelerated depreciation, etc.) on foreign operations of domestic corporations than in the eight countries listed above. In addition, a tax treaty between Japan and the United States reduced the burden of double taxation, whereas for five of the eight countries above, no treaty existed.

The foreign taxes are not necessarily based on the taxable income reported, since foreign taxes are dependent on the foreign tax structure whereas taxable income is dependent on the domestic tax structure. Nevertheless, foreign taxes as a percent of taxable income from foreign sources furnishes some indication of the relative tax burden borne by domestic taxpayers in their foreign operations. Table 2A presents taxable income from foreign sources, total foreign taxes excluding carryover, and foreign taxes as a percent of foreign taxable income.

The percentages shown for each geographic area and country serve to approximate the effective tax rate in the respective areas and countries, although there may be significant differences between this approximation and the actual effective tax rate primarily because (1) The attribution of foreign income to a particular country is based on domestic law, and may differ from the attribution of income by the foreign government which levies the foreign tax. Consequently, a foreign country might have levied taxes on certain income which, according to domestic law, would have been attributed to another country (including the United States). (2) Gross income, and the deductions allocable to gross income which define taxable income under domestic law, may be different from the tax base upon which the foreign government levies taxes. However, these percentages are the closest approximations to the effective tax rates in the various countries that can be derived from the statistics obtained from the foreign tax credit statement.

Total foreign taxes as a percentage of taxable income from foreign sources declined somewhat between 1961 and 1962--from 49 percent to 47 percent. Although in general the percentages in the individual countries were lower than 52 percent--the domestic tax rate--there were notable exceptions, especially in Latin America and Asia.

Venezuela and Chile, which ranked among the leading sources of foreign taxable income, showed tax rates of 81 and 101 percent, respectively. In Venezuela, the high tax rate is partially attributable to additional taxes on net income received by taxpayers in the mining and petroleum industries, which are the predominant industries of United States corporations in Venezuela. In Chile, the tax rate obtained by dividing aggregate creditable taxes by taxable income as determined by United States law appears confiscatory. Actually, since some major U. S. corporations in Chile qualified for the Western Hemisphere trade corporation deduction, their taxable income was reduced some 27 percent (see explanation under section on Western Hemisphere Trade Corporation Returns). In addition, on large copper producers--who are major U. S. taxpayers in Chile--there were high statutory corporation income tax rates varying from 60.5 percent to 92 percent of income. Companies producing copper bars paid a 50-percent extraordinary copper tax on the increased income over basic prices established by law; however, this tax was deductible from taxable income for the purpose of computing Chilean income taxes. Thus, the combination of the reduction of United States taxable income for Western Hemisphere trade corporations and the high Chilean taxes on the copper industry were the chief factors in producing what appears to be a confiscatory tax rate.

On the other hand, there were countries with very low effective tax rates in Latin America such as Jamaica and Trinidad (13 percent) and Panama (17 percent). In Jamaica, corporations regarded as investment companies with at least 90 percent of their shares owned by foreigners were taxed at 2.5 percent on all profits or gains.

NOTE: Detail may not add to total due to rounding.

Some corporations engaged in new industries were granted a seven-year corporation tax exemption, and other corporations similarly engaged were granted a 50-percent tax reduction. Corporations incorporated in Panama and earning all their income outside that country paid no corporation tax. In addition, foreign-owned Panama corporations which obtained income from sources outside Panama were exempt from the withholding tax on dividends. Also, new industries received 100-percent tax exemption for 25 years on income from exports of locally manufactured products.

In Asia, the high effective tax rates were chiefly attributable to high effective tax rates in Iran, Kuwait, and Saudi Arabia, in which there were rates of 57, 55, and 58 percent, respectively. These three countries also ranked among the leading sources of taxable income from foreign sources. In Japan, however, where taxes are generally lower for the reasons stated above, the effective tax rate was 20 percent, considerably less than the domestic tax rate of 52 percent.

Industrial Activity of Domestic Corporations Operating Abroad

Although the industrial activity of the domestic corporation generally provides an indication of the industrial activities accounting for the major portion of the income from foreign countries, in many cases the foreign activity of the branch or subsidiary differs from that of the domestic corporation. For example, the foreign branches and subsidiaries of domestic firms classified under Petroleum refining and related industries--a Manufacturing activity--and operating in Venezuela, Iran, and Kuwait were engaged in the extraction of petroleum. But domestic firms classified under Crude petroleum and natural

gas--a Mining activity--and operating in Saudi Arabia were also engaged in the extraction of petroleum. Thus, although these foreign branches and/or subsidiaries were engaged in similar operations, they were classified in different industries because the classification is based upon the major portion of business receipts of the domestic corporation.

The activity of the integrated petroleum industry accounted for almost half of all taxable income from foreign sources in 1962. Table 2B shows that 15 percent of all taxable income from foreign sources was received by firms whose domestic industrial classification was Crude petroleum and natural gas, and 29 percent of all taxable income was received by firms whose domestic industrial classification was Petroleum refining and related industries. In five of the nine leading countries from which taxable income was received in 1962, either Petroleum refining or Crude petroleum and natural gas were the chief industries of the domestic corporation. In Saudi Arabia, Venezuela, Kuwait, and Iran, these two industries accounted for between 87 to 100 percent of the total foreign taxable income. In the United Kingdom, firms in the Petroleum refining industry were the chief recipients of taxable income, accounting for almost 40 percent of the total.

In the four other leading countries shown in table 2B, the industrial activity was more diversified. In Canada, about one-fourth of the total taxable income was earned by firms in the Finance, insurance, and real estate industry (with more than two-thirds of this accounted for by insurance carriers); another one-fifth, by firms in the Petroleum refining industry. In West Germany, about one-third of the total taxable income was earned by firms in the Motor vehicles and motor vehicle equipment industry. In Japan, about one-fourth of the total taxable income was earned by firms in the Electrical machinery, equipment, and supplies industry; another one-fifth, by firms in the Finance, insurance, and real estate industry. Almost 60 percent of the total taxable income from Chile was received by firms in the Primary metal industry and another 30 percent by firms in Other mining.

Although 7 out of every 10 firms filing Form 1118 were in the Manufacturing or Finance, insurance, and real estate industries, the proportion of foreign income to total taxable income was highest for firms in Mining. Table 2C shows that for the approximately 100 firms in the Mining industry, over 80 percent of the $785 million total income subject to U. S. tax was derived from foreign sources. About 97 percent of the foreign income received by these firms was earned in Asia and Latin America. Over 80 percent of their income tax liability was offset by their foreign tax credit claimed.

Role of Branches and Subsidiaries in Foreign Operations

Although the relationship is not exact, the proportion of total foreign taxes that are taxes paid or accrued (direct taxes) or taxes deemed paid (indirect taxes) does give an indication of the form of operation--branch or subsidiary--prevailing in domestic industries operating abroad. Direct taxes are primarily taxes paid or accrued on branch profits and withholding taxes on dividends paid to domestic corporations by foreign corporations. Indirect taxes are taxes deemed paid by domestic corporations on dividends received from related foreign corporations. These indirect taxes are actually paid or accrued by the related foreign corporations in which the domestic corporation had an interest.

The following limitations should be kept in mind in using the relationship between direct taxes and indirect taxes as an indication of the relationship between branch and subsidiary activity:

(1) The foreign taxes included in this report cover only profits and income taxes, since these are the only taxes eligible for the foreign tax credit. Taxes generally not creditable include the following: excise, franchise, sales, turnover, production, and property taxes. However, no information is available on those foreign taxes which do not qualify for the credit.

(2) Provisions of certain tax treaties between the United States and foreign countries determine who is considered to have paid the foreign tax for credit purposes--the foreign subsidiary or the recipient of the subsidiary's dividends. Where the treaty provisions stipulate that the recipient is considered to have paid the foreign tax, the United States parent corporation is able to claim a credit for direct taxes rather than for the indirect taxes paid by its subsidiary. This results in a lower U. S. income tax after foreign tax credit in certain instances. In such instances, the classification of a tax as direct would therefore not reflect branch operations, since in fact subsidiary operations were involved. Tax treaties with the United Kingdom and Japan contain such provisions.

(3) As mentioned above, withholding taxes paid on dividends are classified as direct taxes despite the fact that the dividend income was earned by operations through a subsidiary rather than a branch.

(4) Lastly, there were direct taxes on rentals, royalties, interest, and compensation for services, etc. Although the amount of taxes on these various sources of income may have been small relative to those on branch profits, by their inclusion in direct taxes they nevertheless, further qualify any statement regarding direct taxes as an indication of branch activity.

364-095 O - 69 - 2

Chart 2E Percent of taxes paid and accrued, and taxes deemed paid, of total foreign taxes excluding carryover, by selected industry, 1962

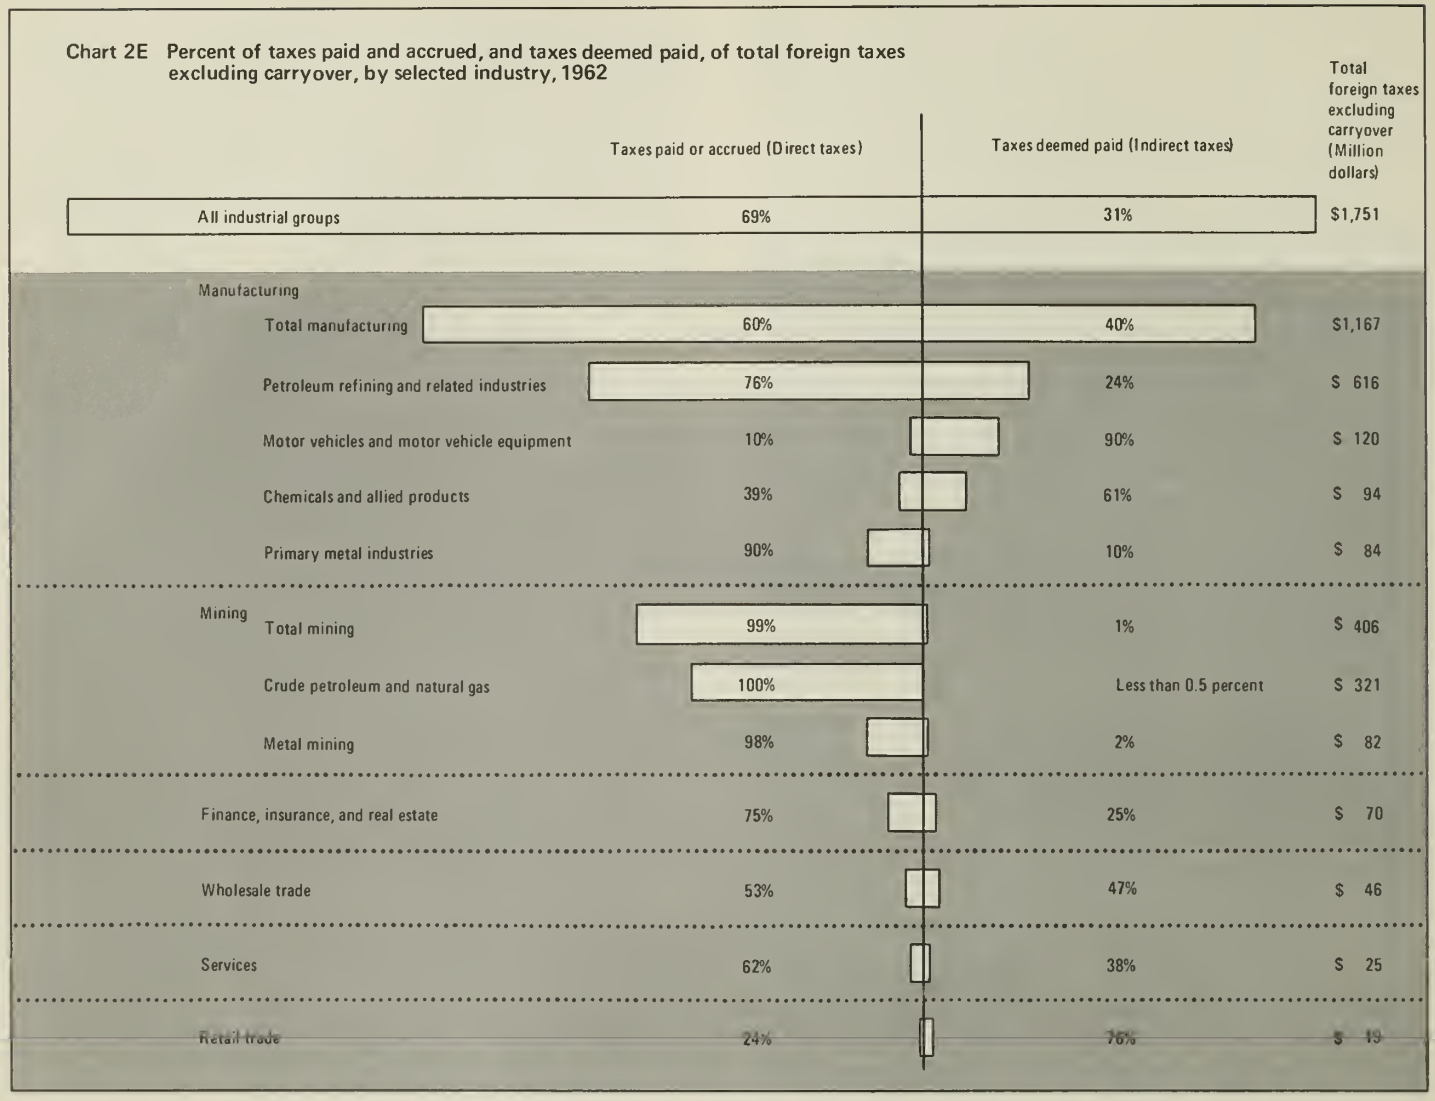

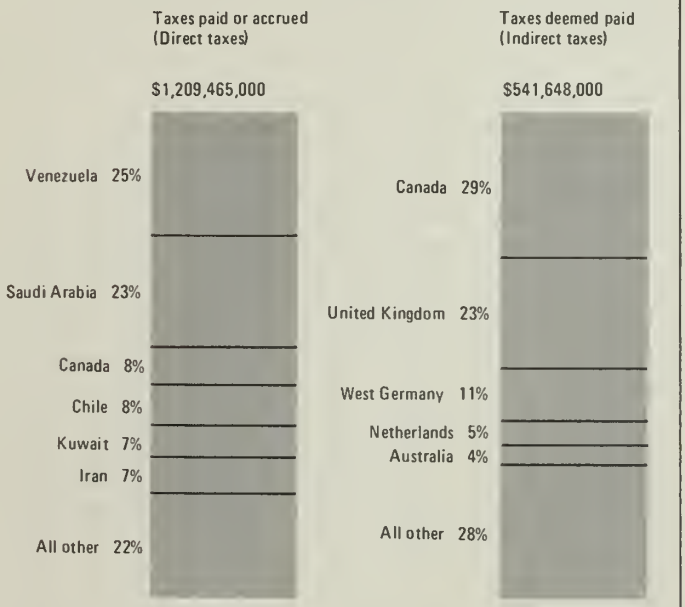

Chart 2E shows that about $7 out of every $10 in current-year foreign taxes were direct taxes. However, there was considerable variation by industry in the proportion of foreign taxes that were direct or indirect. Firms in the Motor vehicles and motor vehicle equipment and the Chemicals and allied products industries, which accounted for about 12 percent of all foreign taxes (excluding carryover), reported 90 and 60 percent, respectively, of total foreign taxes as indirect taxes reflecting subsidiary operations. Three out of every ten dollars in indirect taxes were paid by firms in these industries.

On the other hand, firms in the Crude petroleum and natural gas industry and the Petroleum refining and related industries, which accounted for about half of current-year foreign taxes, reported more than 99 and about 76 percent, respectively, of their total foreign taxes as direct taxes. Domestic corporations which conduct their operations in the extractive industries through foreign branches can take advantage of the depletion allowance on oil and other natural deposits since income from foreign branches is subject to domestic tax law. Under certain circumstances, they also may be able to claim the Western Hemisphere trade corporation deduction. However, foreign subsidiaries (of domestic corporations) which do not conduct business in the United States cannot take the United States percentage depletion allowance, but are subject only to the tax laws of the foreign jurisdictions. Foreign subsidiaries are not entitled to the Western Hemisphere trade corporation deduction. In addition, in determining the amount of dividends from foreign corporations that are taxable under domestic law, only cost depletion can be used since it is the only depletion method allowable in computing the earnings and profits of foreign corporations from which dividends are considered to be paid. Nevertheless, despite the small proportion of total taxes paid as indirect taxes in the Petroleum refining and related industries, firms in these industries accounted for 27 percent of all indirect taxes reported. Firms in the Metal mining industry, similar to other mining industry firms, reported virtually all their foreign taxes as direct taxes.

Chart 2F shows the distribution of direct taxes and indirect taxes by country to which these taxes were paid. Almost 80 percent of the direct taxes were paid to six countries: Venezuela, Saudi Arabia, Canada, Chile, Kuwait, and Iran. As shown above, firms in either Petroleum refining and related industries or Mining earned a substantial part, if not virtually all, of the taxable income

Chart 2F. Taxes paid or accrued (direct taxes) and taxes deemed paid (indirect taxes), by country to which taxes were paid, 1962

reported for these countries, and firms in these industries conducted most of their operations through branches.

Sixty-three percent of the indirect taxes paid through foreign subsidiaries were paid to three counties: Canada, United Kingdom, and West Germany. Table 8 shows that in Canada, indirect taxes were distributed among firms in many industries, with firms in the Motor vehicles and motor vehicle equipment industry paying the largest share, or about one-fifth of the total. In the United Kingdom, unlike in other countries where firms in the Petroleum refining and related industries earned a substantial proportion of total taxable income from foreign sources, foreign subsidiaries rather than branches appeared to be the dominant form of operation. More than 70 percent of the total current-year taxes paid in the United Kingdom were indirect taxes paid through foreign subsidiaries, chiefly attributable to firms in Petroleum refining and related industries which paid over 40 percent of the indirect taxes in that country. Firms in the Motor vehicles and motor vehicle equipment industry and in Wholesale and retail trade together paid another 17 percent of the indirect taxes. In West Germany, firms in the Motor vehicles and motor vehicle equipment industry paid about half of all indirect foreign taxes in that country.

Taxpayer Use of the Per-Country and Overall Credit-Limitation Methods

Table 2D shows the extent to which each limitation method was used for 1962. For that year, the overall limitation method was used on returns accounting for over 50 percent of taxable income from foreign sources, compared to 38 percent for 1961. Tax-year 1962 was the first

Table 2D.—RETURNS WITH FOREIGN TAX CREDIT SUPPORTING STATEMENTS: TAXABLE INCOME FROM FOREIGN SOURCES, FOREIGN TAXES, AND FOREIGN TAX CREDIT, BY CREDIT-LIMITATION METHOD AND BY INDUSTRIAL DIVISION, 1962

Industrial division	Returns with overall limitation			Returns with per-country limitation

[1]Less than $500,000.
NOTE: Detail may not add to total due to rounding.

year taxpayers using the overall limitation method could carry over excess foreign taxes resulting from the previous year's credit limitation computation. For 1961, taxpayers electing the overall limitation were not permitted to credit excess taxes from previous years when only the per-country limitation was in effect, and this may have reduced the number of taxpayers who otherwise would have used the overall limitation method. The carryover provisions first became effective for taxable years beginning after December 31, 1957.

For 1962, corporations using the overall limitation claimed credit for $766 million, or over 90 percent of the taxes they paid, compared to a credit of $779 million, or about 58 percent of the taxes paid, by corporations using the per-country limitation. However, the taxpayers using the per-country limitation could carry over taxes which exceeded the credit limitations from the taxable years beginning after December 31, 1957, whereas the taxpayers using the overall limitation were only permitted to credit excess taxes for the taxable years beginning after December 31, 1960. As a result, taxpayers using the per-country limitation had a tax carryover of $429 million (table 7), whereas taxpayers using the overall limitation had a tax carryover of only $17 million for 1962. If the carryover is excluded from total taxes under both limitation methods, the percent of current year's taxes offset by the foreign tax credit is 93 percent for taxpayers using the overall limitation method and 84 percent for taxpayers using the per-country limitation method.

Table 2D also indicates that the per-country limitation method was the one predominantly used by corporations in Mining--virtually all of that industry's foreign tax credit was claimed on returns in which the per-country limitation method was used. In contrast to the Mining industry, firms in the Manufacturing industries which elected the overall limitation accounted for about two-thirds of the foreign tax credit claimed in that industry. These Manufacturing firms claimed about 85 percent of the foreign tax credit claimed on all returns in which the overall limitation was used.

LIMITATIONS OF THE DATA

Because of the methods used to process the data, the amount of foreign tax credit shown in this supplemental report differs slightly from that shown in *Statistics of Income--1962, Corporation Income Tax Returns*. However, the difference in foreign tax credit claimed on all returns is less than 0.1 percent--$1,564,972,000 in this report and $1,564,064,000 in the corporation returns report.

General Undercoverage

Form 1118 (or its equivalent), which is filed in support of the foreign tax credit claimed and is the source of the data on foreign income and taxes presented in this section, was not filed with 585 out of the 5,266 returns on which the credit was claimed. However, over two-thirds of the 585 corporations failing to file this form had assets of less than $1 million, and only 23 had assets more than $50 million.

On the whole, although the absence of data for lack of Form 1118 information caused some understatement in the number of returns, the effect on the dollar amounts was negligible. Only $20 million, representing less than 1.5 percent of the $1.6 billion total foreign tax credit claimed, was not supported by a Form 1118 (table 1).

Another reason for undercoverage of foreign income and taxes came from the fact that corporations have the option of either claiming a credit for foreign taxes or deducting this amount from the gross income. Corporations taking deductions from gross income do not file Form 1118, and therefore data on these corporations are not included in this report. However, since it is generally more advantageous for a corporation to claim a credit for foreign taxes than to take a deduction from gross income for these taxes, it is probable that the number of returns and the foreign income and taxes on returns with foreign taxes as a deduction were negligible.

Understatement or Overstatement of Specific Items of Data

All of the data in this report reflect the situation prior to any adjustments that may occur as a result of audit. In addition, some corporations, including several claiming large foreign tax credits, specifically indicated that the information provided in their Forms 1118 was not final as all of the necessary information on the corporation's foreign operations--including the tax receipts--was not available at the time the corporation filed its tax return.

In some instances when Forms 1118 were incomplete or abbreviated, a simple adjustment enabled the correct reporting of the data. In other instances, data were imputed whenever possible from logical relationships with other information on the returns. The understatement or overstatement of specific items and the adjustments to correct some of these situations are described below.

Foreign income

Some taxpayers choosing the per-country limitation in the computation of their foreign tax credit did not report the taxable income derived from a particular country because there were no eligible foreign taxes on this income for which they could claim a foreign tax credit. Where this occurred, portions of foreign income are omitted from the statistics. On the other hand, there may be some overstatement of taxable income from some countries because in a few instances income from each country reported on the Form 1118 was not reduced for home office expenses chargeable to the income. Instead, home office expenses were reported as a single deduction from taxable income from all foreign sources on the Form 1118, rather than allocated on a country by country basis. In some cases, taxpayers omitted dividend income from related foreign corporations from Schedule B, Form 1118, even though they reported taxes deemed paid. Therefore, dividend income is understated to the extent that the omitted information could not be obtained from other sources, such as the Form 2952 filed for controlled foreign corporations or the dividend schedule of Form 1120.

In some instances, total foreign taxable income was reported but there was no breakdown on a country by country basis. Where foreign taxes were reported by country, these data were used to estimate the foreign taxable income for each country.

Foreign taxes

Some taxpayers reported only their eligible foreign taxes without distinguishing between taxes paid or accrued and taxes deemed paid through related foreign corporations. In these cases, data were imputed from logical relationships with other information on the return. For example, where it was shown that the taxpayer operated in a foreign country only through a branch operation there would be no deemed paid taxes in that country.

Other taxpayers reported separately the two components of foreign taxes, paid or accrued taxes and deemed paid taxes, but did not allocate these taxes to the countries in which they were applicable. For taxpayers using the per-country limitation, the amount of foreign tax credit claimed for each country served as a guide in determining the amount of taxes applicable to each country, since the amount of credit could not exceed the amount of foreign taxes.

Some taxpayers reported foreign taxes in the necessary detail on the Form 1118 but subtracted an amount from the total without showing the countries to which these deductions were applicable and the amounts to be deducted from the taxes attributable to those countries. Where there was a deduction of taxes from the total without underlying detail, the deduction was ignored unless sufficient information was available so that the deductions could be correctly allocated to the countries to which they applied.

Some understatement of foreign taxes occurred because taxpayers filing consolidated returns who took both the Western Hemisphere trade corporation deduction and the foreign tax credit and used the overall limitation method were subject to an additional restriction in taking the credit according to section 1503(d). This is discussed further under Qualifications and benefits of Western Hemisphere trade corporations.

Under the overall limitation method, the taxpayer is not required to show tax carryover by country. Therefore,

this item is available by country only for those returns electing the per-country method.

No information is available in this report on foreign taxes carried back to previous years since "carrybacks" are reported only when taxpayers submit amended returns reflecting a reduction in United States income tax liability. Amended returns were not included in the sample from which the statistics were drawn.

Differences in Income Concepts

Taxable income from foreign sources is gross income including dividends from foreign sources less allocable deductions determined by the Internal Revenue Code and the regulations thereunder and the provisions of any tax treaty between the United States and a particular foreign country. It is the basis on which domestic taxes on foreign earnings are determined. It may differ from the net profit from foreign business operations and investments shown on the United States income tax returns, as well as from net profit from foreign business operations and investments subject to foreign taxes.

Net profit from foreign business operations and investments for United States tax purposes is generally larger than taxable income because of the statutory special deductions allowed most corporations in computing taxable income. The use of the statutory deduction causes an understatement of income from overseas operations and investments. For example, Western Hemisphere trade corporations could reduce their taxable income from foreign sources by taking a deduction of 27 percent of the taxable income earned in each country in the Western Hemisphere in which they were operating. Therefore Form 1118, which reflects taxable income from foreign sources, may understate income from foreign operations.

Taxable income from foreign sources also may differ from net profit from foreign business operations and investments subject to foreign taxes. Taxable income from foreign sources is dependent on the construction and interpretation of domestic law and on tax treaties with foreign countries. However, net profit from foreign business operations and investments subject to foreign taxes is dependent on the laws of each foreign country which exercises jurisdiction over that income, as well as on any tax treaty between it and the United States. The gross income and deductions allocable to gross income which define net profit subject to foreign taxes differ between each foreign country and the taxable income defined by United States law.

Country Classification

Taxable income, shown on Form 1118, was generally reported for each country on the basis of the "source of income" rules in Code sections 861 through 864 and the regulations pertaining to those Code provisions. Although there were tax treaties with various countries covering source of income, the source rules in most treaties were similar to those found in the Code. A summary of the principles in these Code sections used in the allocation of foreign income appears in the Explanation of Terms under Geographic classification: area or country.

Study of these "source of income" rules shows that foreign income and taxes attributed to a particular country may include both income derived from, and taxes paid and deemed paid to, other countries. For example, when a domestic corporation owns 10 percent or more of the stock of a foreign corporation, all of the dividend income received from this related foreign corporation plus the taxes paid directly by the domestic corporation and the indirect taxes deemed paid by the domestic corporation on the dividend income were attributed to the country in which the related foreign corporation was incorporated. This rule applies under two different sets of circumstances. If the related foreign corporation received income from branches or other operations in other countries, the dividends paid by it were held to be derived entirely from the country of incorporation. The fact that the profits out of which they were paid were derived from these other countries is not relevant in determining the source of the dividend income. Similarly, if the related foreign corporation owns 50 percent or more of the stock of foreign corporations incorporated in other countries, the dividends paid by the related foreign corporation were held to be derived entirely from its country of incorporation, although part or all of its profits were derived in the form of dividends from its foreign subsidiaries in other countries.

Taxes on income from branch operations and from other receipts such as portfolio dividends, royalties, interest, etc., were generally reported for that country to which the taxes were actually paid.

Although branch profits derived from a manufacturing operation were allocated in part to the country in which the manufacturing took place and in part to the country in which the sale of manufactured goods was consummated, profits derived from the extractive industries, e.g., petroleum and metal mining, were ordinarily attributed to the country in which the natural deposits were extracted. Therefore, part of the income attributed to countries in which mining or extraction of natural deposits was the major source of income, such as Venezuela, Iran, and Kuwait, was earned by sales taking place in other countries. In 1962 as well as in prior years, firms engaged in mining operations abroad accounted for a substantial part of branch profits.

Industry Classification

All industrial classification of data on foreign income and taxes was based on the activity of the domestic corporation rather than the activity of the foreign branch or subsidiary. To the extent that the activity of the foreign branch or subsidiary differs from the activity of the domestic corporation, the industrial classification of the data does not accurately reflect the actual foreign industrial activity.

RETURNS WITH FOREIGN TAX CREDIT

Table 1.—NUMBER OF RETURNS, TOTAL ASSETS, NET INCOME, INCOME SUBJECT TO U.S. TAX, U.S. INCOME TAX BEFORE CREDITS, FOREIGN TAX CREDIT CLAIMED, FOREIGN TAXABLE INCOME, AND FOREIGN TAXES, BY MAJOR INDUSTRIAL GROUP

[1]For "All geographic areas" the data in columns 1-6 and all return counts pertain to the activity of the domestic corporation. Since a corporation may claim credit for taxes paid in each country from which income is remitted, data obtained from the domestic corporation's income statement and balance sheet may be repeated for several countries. Consequently, the data for each geographic area are noncumulative and cannot be added to the "All geographic areas" totals. [2]Less than $500 per return.

NOTE: See text for explanatory statements and for discussion of limitations of the data. Detail may not add to total due to rounding.

RETURNS WITH FORM 1118 FILED IN SUPPORT OF FOREIGN TAX CREDIT CLAIMED

Table 6.—NUMBER OF RETURNS, TOTAL ASSETS, NET INCOME, INCOME SUBJECT TO U. S. TAX, U. S. INCOME TAX BEFORE CREDITS, FOREIGN TAXABLE INCOME, AND FOREIGN TAXES, BY GEOGRAPHIC AREA WHERE TAXES WERE PAID AND BY SIZE OF TOTAL ASSETS

Geographic area and size of total assets	Number of returns	Total assets (Thousand dollars)	Net income (Thousand dollars)	Dividends received from foreign corporations (Thousand dollars)	Income subject to U.S. tax (Thousand dollars)	U.S. income tax before credits (Thousand dollars)	Taxable income from foreign sources			Foreign taxes			
							Total (Thousand dollars)	Dividends from related corporations		Total excluding carryover (Thousand dollars)	Paid or accrued		Deemed paid

n.a. - Not available. [1]These totals were not tabulated independently and sre consequently not available. [2]Less than $500 per return. [3]Loss.

[4]With the exception of "All geographic aress," data for tax csrryover and the foreign tax credit sre not svailable for returns using the overall limitstion. Taxpayers using this limitation method are required to provide only summary totals, and not "country" data, for the two items. Consequently, the oversll limitation dsts for Total foreign taxes, column 10, include carryover only for the "All geographic areas" totals.

NOTE: See text for explanstory statements and for discussion of limitations of the dsta. Detail may not add to total due to rounding.

Table 8.—NUMBER OF RETURNS, TOTAL ASSETS, NET INCOME, INCOME SUBJECT TO U. S. TAX, U. S. INCOME TAX BEFORE CREDITS, FOREIGN TAXABLE INCOME, AND FOREIGN TAXES, FOR SELECTED MAJOR INDUSTRIAL GROUPS, BY COUNTRY WHERE FOREIGN TAXES WERE PAID

Industry and country	Number of returns	Total assets (Thousand dollars)	Net income (Thousand dollars)	Dividends received from foreign corporations (Thousand dollars)	Income subject to U. S. tax (Thousand dollars)	U. S. income tax before credits (Thousand dollars)	Taxable income from foreign sources: Total (Thousand dollars)	Taxable income from foreign sources: Dividends from related corporations: Number of returns	Taxable income from foreign sources: Dividends from related corporations: Number of related corporations	Taxable income from foreign sources: Dividends from related corporations: Amount (Thousand dollars)	Foreign taxes: Total excluding carryover (Thousand dollars)	Foreign taxes: Paid or accrued: Number of returns	Foreign taxes: Paid or accrued: Amount (Thousand dollars)	Foreign taxes: Deemed paid: Number of returns	Foreign taxes: Deemed paid: Number of related corporations	Foreign taxes: Deemed paid: Amount (Thousand dollars)

n.a. - Not available. (1) Lese than $500 per return. [2]Loss.

NOTE: The data in columns 1-6 and all return counts pertain to the activity of the domestic corporation. Since a corporation may claim credit for taxes paid in each country from which income is remitted, data obtained from the domestic corporation's income etatement and balance sheet may be repeatad for eeveral countries. Consequently, the data for each country are noncumulative and do not add to the individual area and all country totals. See text for sxplanatory statements and diecussion of limitations of the data.
Detail may not add to total due to rounding.

Table 8a.—NUMBER OF RETURNS, TOTAL ASSETS, NET INCOME, INCOME SUBJECT TO U. S. TAX, U. S. INCOME TAX BEFORE CREDITS, FOREIGN TAXABLE INCOME, AND FOREIGN TAXES, BY COUNTRY WHERE FOREIGN TAXES WERE PAID, FOR COUNTRIES INCLUDED IN THE "OTHER" CATEGORIES IN TABLE 8

Country	Number of returns	Total assets (Thousand dollars)	Net income (Thousand dollars)	Dividends received from foreign corporations (Thousand dollars)	Income subject to U. S. tax (Thousand dollars)	U. S. income tax before credits (Thousand dollars)	Taxable income from foreign sources				Foreign taxes					
							Total	Dividends from related corporations			Total excluding carryover	Paid or accrued		Deemed paid		
								Number of returns	Number of related corporations	Amount (Thousand dollars)	(Thousand dollars)	Number of returns	Amount (Thousand dollars)	Number of returns	Number of related corporations	Amount (Thousand dollars)

n.a. - Not available. [1]Less than $500 per return. [2]Loss.

NOTE: The data in columns 1-6 and all return counts pertain to the activity of the domestic corporation. Since a corporation may claim credit for taxes paid in each country from which income is remitted, data obtained from the domestic corporation's income statement and balance sheet may be repeated for several countries. Consequently, the data for each country are noncumulative and cannot be added to obtain totals for the "Other" categories. See text for explanatory statements and for discussion of limitations of the data.
Detail may not add to total due to rounding.

Table 9.—NUMBER OF RETURNS, TOTAL ASSETS, NET INCOME, INCOME SUBJECT TO U.S. TAX, U.S. INCOME TAX BEFORE CREDITS, FOREIGN TAXABLE INCOME, AND FOREIGN TAXES, BY SIZE OF TOTAL ASSETS AND BY COUNTRY WHERE FOREIGN TAXES WERE PAID

Size of total assets and country	Number of returns	Total assets (Thousand dollars)	Net income (Thousand dollars)	Dividends received from foreign corporations (Thousand dollars)	Income subject to U. S. tax (Thousand dollars)	U. S. income tax before credits (Thousand dollars)	Taxable income from foreign sources: Total (Thousand dollars)	Taxable income from foreign sources: Dividends from related corporations: Number of returns	Dividends from related corporations: Number of related corporations	Dividends from related corporations: Amount (Thousand dollars)	Foreign taxes: Total excluding carryover (Thousand dollars)	Foreign taxes: Paid or accrued: Number of returns	Paid or accrued: Amount (Thousand dollars)	Foreign taxes: Deemed paid: Number of returns	Deemed paid: Number of related corporations	Deemed paid: Amount (Thousand dollars)

n.a. - Not available. [1]Less than $500 per return. [2]Loss.

NOTE: The data in columns 1-6 and all return counts pertain to the activity of the domestic corporation. Since a corporation may claim credit for taxes paid in each country from which income is remitted, date obtained from the domestic corporation's income statement and balance sheet may be repeated for several countries. Consequently, the data for each country are noncumulative and do not add to the individual area and all countries totals. See text for explanatory statements and for discussion of limitations of the data.
Detail may not add to total due to rounding.

RETURNS WITH AND WITHOUT FOREIGN TAX CREDIT

Table 10.—NUMBER OF RETURNS, NET INCOME, U.S. INCOME TAX BEFORE CREDITS, FOREIGN TAXABLE INCOME, FOREIGN TAXES, AND FOREIGN TAX CREDIT CLAIMED, BY INDUSTRIAL DIVISION, 1954-1956 AND 1959-1962

Industrial division and selected year	All active corporation returns			Returns with foreign tax credit claimed									
								Returns with supporting statements, Form 1118					
	Number of returns	Dividends received from foreign corporations (Thousand dollars)	Net income (less deficit) (Thousand dollars)	Number of returns	Net income (Thousand dollars)	U.S. income tax before credits (Thousand dollars)	Foreign tax credit claimed (Thousand dollars)	Number of returns	Taxable income from foreign sources (Thousand dollars)	Net income (Thousand dollars)	U.S. income tax before credits (Thousand dollars)	Foreign taxes (Thousand dollars)	Foreign tax credit claimed (Thousand dollars)
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

n.a. - Not available. [1]Deficit. [2]Less than $500 per return.

NOTE: See text for explanatory statements and for discussion of limitations of the data. The information for each of the years prior to 1961 appears in the Statistics of Income--Corporation Income Tax Returns report for that year. The 1961 data are from Statistics of Income--1961, Supplemental Report on Foreign Tax Credit Claimed on Corporation Income Tax Returns.

Detail may not add to total due to rounding.

RETURNS WITH AND WITHOUT FOREIGN TAX CREDIT

Table 11.—NUMBER OF RETURNS, NET INCOME, U. S. INCOME TAX BEFORE CREDITS, FOREIGN TAXABLE INCOME, FOREIGN TAXES, AND FOREIGN TAX CREDIT CLAIMED, BY SIZE OF TOTAL ASSETS, 1954-1956 AND 1959-1962

Size of total assets and selected year	All active corporation returns			Returns with foreign tax credit claimed									
								Returns with supporting statements, Form 1118					
	Number of returns	Dividends received from foreign corporations (Thousand dollars)	Net income (less deficit) (Thousand dollars)	Number of returns	Net income (Thousand dollars)	U.S. income tax before credits (Thousand dollars)	Foreign tax credit claimed (Thousand dollars)	Number of returns	Taxable income from foreign sources (Thousand dollars)	Net income (Thousand dollars)	U.S. income tax before credits (Thousand dollars)	Foreign taxes (Thousand dollars)	Foreign tax credit claimed (Thousand dollars)

n.a. - Not available.

[1]Includes returns with zero assets.

[2]Estimate is not shown separately because of high sampling variability. However, the data are included in the total.

NOTE: See text for explanatory statements and for discussion of limitations of the data. The information for each of the years prior to 1961 appears in the Statistics of Income--Corporation Income Tax Returns report for that year. The 1961 data are from Statistics of Income--1961, Supplemental Report on Foreign Tax Credit Claimed on Corporation Income Tax Returns.

Detail may not add to total due to rounding.

12 Total assets, income, foreign dividends, tax, and foreign tax credit, by size of total assets and industrial group, 60

INTRODUCTION

Domestic corporation investment in the stock of foreign corporations may be divided into three categories: (1) investment in controlled foreign corporations, i.e., corporations in which a domestic corporation owns more than 50 percent of the voting stock; (2) investment in related foreign corporations, i.e., corporations in which a domestic corporation owns at least 10 percent of the voting stock; and (3) portfolio investments, i.e., investments of less than 10 percent of a foreign corporation's voting stock. Actually, controlled foreign corporations are a subgroup of the related foreign corporations, but they are treated separately in this report because of their importance and the difference in treatment by the United States Internal Revenue Code.

Data on controlled foreign corporations and related corporations are presented in the sections on Controlled Foreign Corporations and Foreign Tax Credit, respectively. This section presents data from domestic corporation income tax returns showing ownership of foreign corporation stock regardless of amount of equity or control. The data included are: dividends received from foreign corporations, net income or deficit, income tax, and foreign tax credit.

The data in this section were derived from returns filed with accounting periods ended July 1962-June 1963 which indicated the ownership of foreign corporation stock. Corporation returns filed by Small Business Corporations electing to be taxed through their shareholders were excluded since the return (Form 1120-S) which these taxpayers file does not have a question concerning the ownership of foreign corporation stock. It is believed that the number of Small Business Corporations owning stock in a foreign corporation is negligible. It should also be noted that in this section, unlike in other sections of this report, the rather small number of resident foreign corporations indicating ownership of foreign corporation stock (1120-F) were included.

SUMMARY OF THE DATA

Table 3A shows that 10,718, or less than 1 percent, of all domestic corporations owned stock in foreign corporations. However, this small group reported almost 40 percent of the total assets and over 55 percent of the net income (less deficit) of all domestic corporations. Investment in the stock of foreign corporations was particularly important for firms with total assets of $100 million or more, where 37 percent of the firms had investments in foreign stock. In contrast, of firms with total assets under $100 million, less than one percent had foreign stock ownership.

Table 3A.—ALL ACTIVE CORPORATION RETURNS AND RETURNS WITH FOREIGN STOCK: NUMBER OF RETURNS, TOTAL ASSETS, NET INCOME, AND FOREIGN DIVIDENDS RECEIVED, 1962

NOTE: Detail may not add to total due to rounding.

Industry and Size of Domestic Corporation

Almost four out of every ten returns of corporations with foreign stock were in the Finance, insurance, and real estate industry, and another three out of ten were in Manufacturing. Table 3B shows that in Manufacturing, about 2 percent of all firms reported foreign stock ownership; in Finance, insurance, and real estate, about 1 percent. However, firms in the Manufacturing industries accounted for $1,185,767,000, or about 83 percent of the dividends paid on foreign corporation stock, compared to only $77,567,000, or about 5 percent, for firms in Finance, insurance, and real estate. One of the chief reasons for this is that more than two-thirds of the controlled foreign corporations were controlled by domestic parent corporations primarily engaged in Manufacturing, while less than one-twentieth of the controlled foreign corporations were controlled by domestic corporations in Finance, insurance, and real estate (table 13). Therefore, although only a slightly larger proportion of domestic corporations in Manufacturing had investment in foreign corporations, these corporations owned considerably more stock in foreign corporations than those in the Finance, insurance, and real estate industry.

In Manufacturing, the principal recipients of dividends from foreign corporations were the 23 firms in Petroleum refining and related industries, which accounted for $416,713,000, or almost 30 percent of all dividends received from foreign corporations. Other major recipients of foreign dividends were the 21 firms in the Motor vehicles and motor vehicle equipment industry and the 206 firms in the Chemicals and allied products industry, which reported about 15 percent and 10 percent of all dividends, respectively.

Although less than half of the corporations reporting ownership of foreign corporate stock received dividends from foreign corporations, two-thirds of those with assets of $100 million or more received foreign dividends.

Table 3C.—DIVIDENDS RECEIVED FROM ALL FOREIGN CORPORATIONS AND RELATED FOREIGN CORPORATIONS, AND DIVIDENDS PAID BY CONTROLLED FOREIGN CORPORATIONS AND SUBSIDIARIES, BY SELECTED INDUSTRIAL GROUP OF DOMESTIC CORPORATIONS RECEIVING DIVIDENDS, 1962

All other industries.....	63,638	47,843	75.2	47,909	75.3

NOTE: See Foreign dividends in the Explanation of Terms for a discussion of the relationship between the three measures of foreign dividends provided in this table.

These firms, which comprised about 5 percent of all firms with foreign stock, accounted for almost 90 percent of the foreign dividends reported. Firms in Manufacturing comprised about half of these large firms, but received almost 90 percent of the foreign dividends reported by the latter.

Table 3C shows the importance of related foreign corporations, as well as of controlled foreign corporations, as sources of foreign dividends. Of the dividends received, $1,286,570,000 came from related foreign corporations. Since firms in Manufacturing reported more controlled foreign corporations than firms in other industries, it is not surprising that they also reported a much larger percentage of all dividends as coming from controlled foreign corporations (82 percent) than firms in other industries (65 percent). For the major industries shown in table 3C, the importance of controlled foreign corporations as a source of foreign dividends varied from 46 percent in Finance, insurance, and real estate to 94 percent in the Motor vehicles and motor vehicle equipment industry.

Credit for Foreign Taxes on Dividend Income

Domestic corporations showing ownership of foreign corporation stock reported a total foreign tax credit claimed of $1,254,108,000, which represented 80 percent of the $1,564,972,000 claimed on all corporation returns (table 1). This credit includes credit for foreign taxes on profits from branch operations and such other foreign income as royalties, licensing fees, etc., as well as credit for foreign taxes paid on dividends from overseas investments. Some idea of the proportion of the foreign tax credit which was attributable to credit for taxes on dividends from foreign investments can be obtained by noting that out of a total of $1,751,113,000 in foreign taxes (less carryover) paid by corporations filing foreign tax credit supporting statements for 1962, $541,648,000, or 31 percent, were deemed paid taxes on dividend income remitted by related foreign corporations. However, taxes deemed paid do not include direct taxes

on dividends such as withholding taxes. Therefore, total taxes on dividend income, as well as the proportion of the total foreign tax credit claimed as a result of taxes paid on dividend income, are somewhat understated.

LIMITATIONS OF THE DATA

Coverage

The data in this section were obtained from all corporation returns, except Form 1120-S, which indicated ownership of foreign corporation stock in one or more of the following ways:

(1) A check mark indicating ownership of foreign corporation stock to a question on the return (Forms 1120, 1120-F, and 1120L);

(2) Dividends on stock of foreign corporations shown in a schedule or section of the return (Forms 1120, 1120-F, 1120L and 1120M);

(3) A statement attached to the return indicating ownership of foreign corporation stock in accordance with the instructions for filing the return (Forms 1120, 1120-F, 1120L, and 1120M).

Some returns may have been incorrectly prepared by the taxpayer so that (1) the question on ownership of foreign corporation stock was incorrectly answered or omitted; (2) if there were dividends on foreign corporation stock they were attributed to domestic corporations; and (3) the required statements, giving further detail on ownership of foreign corporation stock, were not filed with the return. Under the above three conditions, there would be some undercoverage due to incorrect reporting which would not be detected in processing the returns. Consequently, the data would not reflect the activity of all corporations with foreign corporation stock. There is no information on the number and kind of returns which were incorrectly prepared and therefore had errors not detected in processing. Also, since the data obtained were from returns before any audit, they do not reflect post-audit adjustments.

There were also some processing errors in collecting the information reported by the taxpayer which resulted in the exclusion of some returns with foreign corporation stock from the tabulation of the data. However, the undercoverage resulting from errors in processing was only about 100 returns, which accounted for less than 0.1 percent of all foreign dividends reported.

Data Included

It should be noted that dividends from related foreign corporations shown in the foreign tax credit tables include a special type of receipts in the form of royalties which were treated as dividends for purposes of the foreign tax credit. Although these receipts were included in gross income of the United States taxpayer, they were not identified as dividends in the income statement of the domestic corporation's return. Therefore, they were not included in the dividends received from all foreign corporations. One example of these receipts treated as dividends only for foreign tax credit purposes were royalties paid out of the earnings and profits of wholly owned subsidiaries under certain circumstances [Code section 902(d)].

It should also be noted that in some cases, the amount of dividends paid by controlled foreign corporations exceeded the amount of dividends received by the domestic parent corporation. For further explanation, see Limitations of the data under Controlled Foreign Corporations.

Section 4

Controlled Foreign Corporations, 1962

INTRODUCTION

Domestic corporations conduct business abroad primarily through subsidiary corporations incorporated in foreign countries and through foreign branches. This section presents data on foreign corporations controlled by United States corporations. As described below, these data were obtained from information returns filed by domestic corporations for the foreign corporations they controlled.

Filing Requirements for Controlled Foreign Corporations

Domestic corporations are required to file Form 2952, "Information Return by a Domestic Corporation with Respect to Controlled Foreign Corporations," for each of their controlled foreign corporations and for the foreign subsidiaries of these controlled foreign corporations.

A controlled foreign corporation is a corporation incorporated in a foreign country, Puerto Rico, or possession of the United States, with more than 50 percent of its voting stock owned by a United States corporation any time during the latter's taxable year. The definition of a controlled foreign corporation also included a "second tier" of foreign corporate ownership, termed a foreign subsidiary in the Internal Revenue Code. Again control was defined to exist when the directly controlled foreign corporation owned more than 50 percent of the voting stock in its foreign subsidiary. In this section, the first tier is termed a controlled foreign corporation; the second tier, a subsidiary of a controlled foreign corporation. Both tiers of foreign ownership are also collectively referred to as "controlled foreign corporations" or just as "foreign corporations."

In 1962, there were 2,642 domestic corporation income tax returns filed with at least one Form 2952 attached. Forms 2952 were filed for 10,539 active controlled foreign corporations including those both directly and indirectly owned. Levels of ownership and the number of domestic corporation returns and of foreign corporation information returns for 1962 were as follows:

Levels of ownership	Number of corporations
A--Domestic corporation	2,642
B--Active controlled foreign corporations directly controlled by domestic corporation A	7,335
C--Active subsidiary of controlled foreign corporation--directly controlled by B and indirectly controlled by domestic corporation A	3,204
Total of B and C	10,539

When domestic corporation A filed its return, it included a Form 2952 for B if B's annual accounting period ended within A's taxable year. Domestic corporation A also included a Form 2952 for C if C's annual accounting period ended within B's annual accounting period. However, Forms 2952 were required for B and C only if their annual accounting periods began after December 31, 1960. These filing periods are illustrated in chart 4A.

A domestic corporation filing Form 2952 is required to attach a profit and loss statement and balance sheet for each controlled foreign corporation. Under provisions of Code section 6038, these financial statements were to be expressed in United States currency and were to be "prepared in conformity with generally accepted accounting principles, and in such form and detail as is customary for the corporation's accounting records." In other words, the law required translation into dollars, but for the statements as a whole did not prescribe the accounting methods to be used for reporting. Consequently, a wide range of methods was often used. Although most statements appeared to reflect "generally accepted accounting principles" of United States corporations, some foreign financial statements clearly contained one or more exceptions to these principles.

Controlled Foreign Corporation Information Presented in this Report

Financial information taken from Form 2952 and the attached financial statements filed for each controlled foreign corporation and its foreign subsidiaries consisted of gross receipts, net profit or loss before taxes, foreign income taxes, dividends paid to United States parent corporations, and total assets. In addition, certain financial information was obtained for each domestic parent corporation.

For controlled foreign corporations or their domestic parents, data are classified by:

- Country of incorporation
- Country of principal place of business
- Year of incorporation

} of controlled foreign corporations or their subsidiaries

- Industrial group or division
- Size of total assets

} of both foreign corporation and domestic corporation return

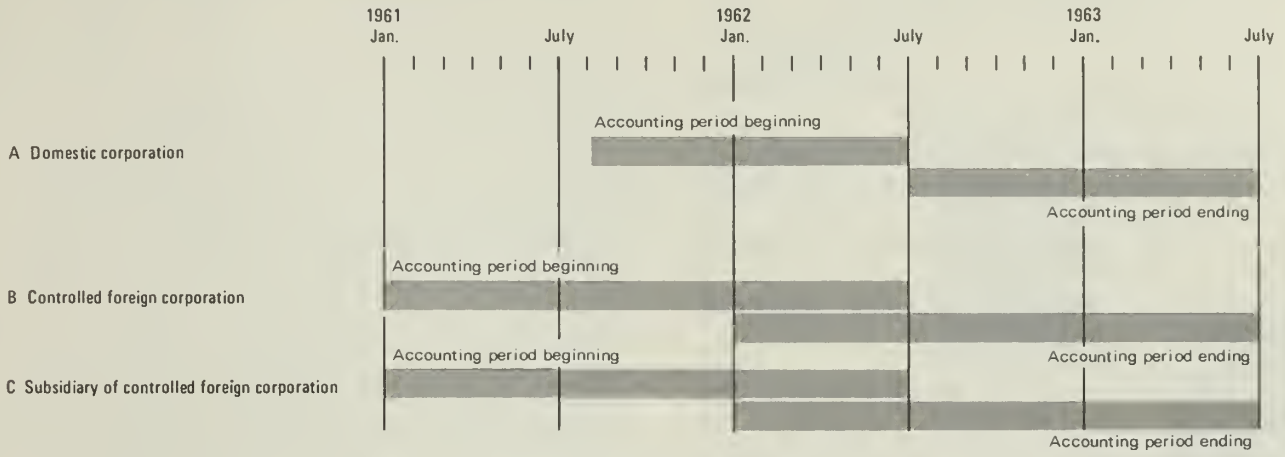

Data for controlled foreign corporations and for subsidiaries of controlled foreign corporations are separately presented in two tables: In table 13, they are classified by the industry of the domestic corporation, which includes 69 industrial classifications. In table 22, they are distributed by country of incorporation, which includes the complete list of 110 geographic classifications. However, in most of the tables, data are summarized into 77 geographic classifications and 53 industrial classifications, and no distinction is made between a controlled foreign corporation and its subsidiary. The classifications selected were the most significant based on these statistics.

All tables except table 30 include only active controlled foreign corporations and their active subsidiaries. Table 30 presents data solely for inactive controlled foreign corporations and inactive foreign subsidiaries. As shown in this table, there were 1,534 inactive foreign corporations.

Accounting Principles

Some accounting practices were unique to certain countries. In Canada, for example, the last-in, first-out (LIFO) method of accounting for inventories was not recognized under Canadian tax law, and this discouraged its use for financial reporting purposes. Furthermore, there was considerable variation among the foreign accounting principles used. As examples of how foreign accounting principles could vary from accounting principles used in the United States, foreign countries often took official recognition of currency inflation and the

Chart 4A. Accounting periods of domestic and foreign corporations included in this section

Note: A was required to file Form 2952 for B and C only if their accounting periods began after December 31, 1960

Note: Accounting periods do not exceed one year in duration

resulting need to revalue fixed assets. They also recognized the use of reserves to equalize profits from one year to the next.

Domestic corporations generally reported to shareholders on a consolidated basis. In so doing, foreign subsidiaries were generally included. However, under the Internal Revenue Code, foreign subsidiaries, with rare exceptions, could not be included in a consolidated income tax return. When foreign subsidiaries were included in consolidated statements for shareholders, the domestic corporations were supposed to recast the foreign accounting data to conform with U. S. accounting principles. This generally facilitated compliance with the reporting requirements of the Internal Revenue Code with respect to controlled foreign corporations. However, some data for foreign subsidiaries were filed for tax reporting purposes that did not reflect the domestic corporation's subsequent recasting of these data to conform with U. S. accounting principles. Furthermore, in reporting to shareholders on a consolidated basis, domestic corporations did not always recast the data for foreign subsidiaries. For example, when domestic corporations recorded only the income remitted as dividends from their foreign subsidiaries and therefore excluded foreign subsidiaries as such from their consolidated statements, they had no reason to recast the income and financial data for their overseas operations. Even when data for foreign subsidiaries were included in consolidated statements, some United States corporations may have included such data without recasting them when the effect of the foreign accounting principles was not material in defining the net income or total assets of the consolidated entity.

In reporting to U. S. shareholders, not only were domestic corporations supposed to recast the data for their foreign operations according to United States accounting principles, but in so doing they were supposed to translate the data to United States dollars. This posed additional problems in deciding which point in time should be used and which conversion rate accurately reflected business conditions at that point in time. Thus decisions had to be made as when to use the historical exchange rate that applied at the time of the original transaction, and when to use the current end-of-year exchange rate, or some variation of both. Fixed assets (and depreciation), long-term receivables and payables, and capital stock were typically translated at the historical exchange rate, although current exchange rates were sometimes used for certain long-term receivables and payables. Current exchange rates were used for current assets (including inventories) and current liabilities. Income statements were also translated to reflect changes in the exchange rate for the current accounting period.

When foreign accounting statements were recast according to United States accounting rules, unrealized exchange gains and losses sometimes resulted. A general accounting principle in the United States is to recognize unrealized (as well as realized) losses, but to defer recognition of gains until they are realized. Therefore, although net profit of controlled foreign corporations when recast according to United States accounting principles does not reflect unrealized exchange gains, it does reflect unrealized exchange losses, and this affects the net profit shown in the statistics.

SUMMARY OF THE DATA

Selected Highlights for Both Domestic Corporations and Their Controlled Foreign Corporations

Domestic corporations controlling foreign corporations
- --represented less than 1 percent of all domestic corporations, but accounted for 40 percent of the net income
- --controlled an average of four foreign corporations
- --included large domestic corporations (assets of $50 million or more), which
  - --represented one-fifth of all domestic parent corporations, but
  - --received 90 percent of the dividends from controlled foreign corporations
  - --controlled an average of ten foreign corporations

Controlled foreign corporations and their subsidiaries
- --numbered 10,539
- --earned $4.5 billion in net profit
  - --paid 36 percent of this in foreign taxes
  - --paid 25 percent of this in dividends to domestic parents
- --had assets amounting to 15 percent of the assets of their domestic parent corporations

Of controlled foreign corporations and their subsidiaries,
- --70 percent were directly controlled and had 80 percent of the assets
- --30 percent were indirectly controlled and had 20 percent of the assets
- --15 percent were incorporated before 1930 and
  - --had one-half of the net profit
  - --had one-fifth of the net loss
- --50 percent were incorporated during 1955-1962, but
  - --had one-fifth of the net profit
  - --had one-half of the net loss
- --less than 1 percent had assets of $100 million or more, but accounted for 25 percent of the net profit

Foreign operations in Canada and the United Kingdom led, with
- --37 percent of the foreign corporations
- --50 percent of the net profit
- --70 percent of the foreign corporations with $100 million or more in assets

Manufacturing activity was of key importance, with
- --70 percent of the foreign corporations controlled by domestic Manufacturers
  - --three-fifths of these foreign corporations were also in Manufacturing, and
  - --one-fifth were in Trade
- --three-quarters of the foreign manufacturing profits earned in six countries: Canada, United Kingdom, West Germany, Australia, France, and Brazil

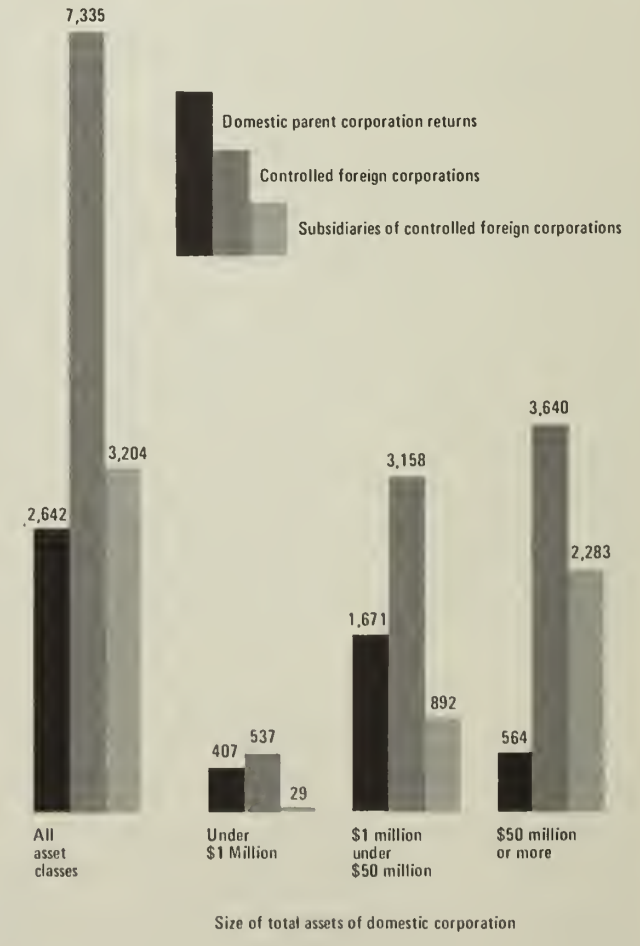

Less overall tax burden occurred for corporations incorporated in Panama, Switzerland, Venezuela, Liberia, and the Bahamas, and these corporations often
- --received income from outside the country of incorporation
- --paid taxes to other countries
- --remitted a smaller proportion of profits to domestic corporations

Chart 4B. Number of domestic parent corporation returns, controlled foreign corporations, and subsidiaries of controlled foreign corporations, by size of total assets of domestic corporation, 1962

Characteristics of Domestic Corporations and Their Foreign Corporations

As shown in table 4A, 2,642 domestic corporations, or only 2 out of every 1,000 firms, reported controlling interests in foreign corporations. These relatively few corporations accounted for more than 20 percent of the total assets, 29 percent of the receipts, and 40 percent of the net income shown on all domestic corporation returns. Included in their net income of $22,530 million were $1,133 million in dividends paid by controlled foreign corporations and their subsidiaries directly to United States parent corporations. This $1,133 million accounted for 83 percent of all the foreign dividends received by United States corporations with controlled foreign corporations and 79 percent of all foreign dividends reported as being received by all domestic corporations. Actually, when dividends to noncontrolling domestic corporate shareholders are included, controlled foreign corporations and their subsidiaries remitted more than $1,133 million

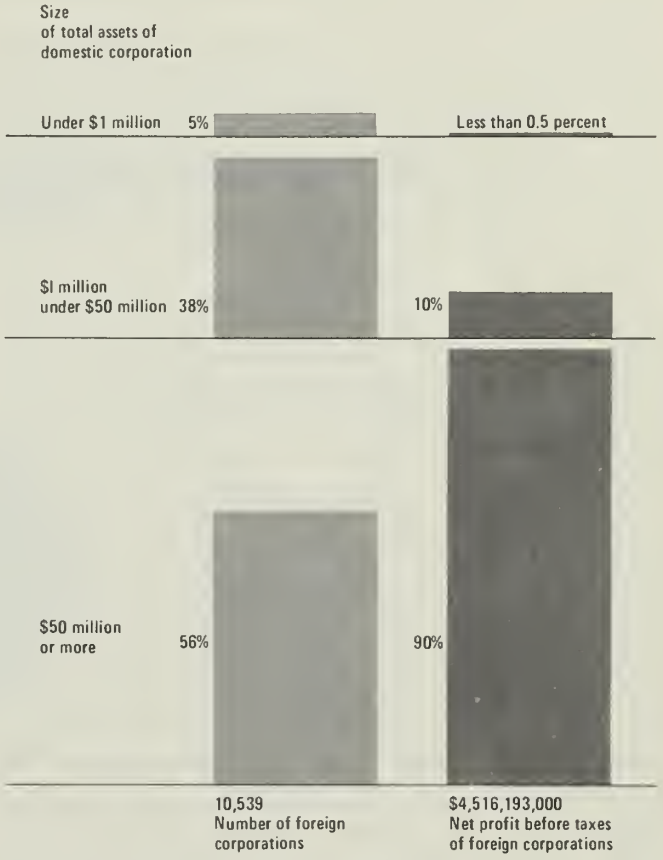

to United States corporations. These additional foreign dividends are included in table 4A in Dividends received from all foreign corporations.

The total assets of $298,545 million shown in table 4A included not only the assets of the controlling domestic corporations, but also the assets of those domestic corporations with less than controlling interest or no interest whatsoever in controlled foreign corporations which were included in consolidated returns where at least one corporation did control one or more foreign corporations. Thus, although the assets figure is an overstatement of total assets for domestic corporations controlling foreign corporations, the number of returns (2,642) is an understatement of the number of controlling domestic corporations because more than one controlling domestic corporation could be included in a consolidated return.

Charts 4B and 4C present data by size of total assets of the domestic corporation. As the size of the total assets of the domestic corporation return became larger, the average number of foreign corporations per domestic return rapidly increased. For domestic corporations with total assets of less than one million dollars, there was a ratio of about one foreign corporation per return. The ratio increased to over ten to one for the 564 domestic corporation returns with $50 million or more in total assets. These 564 returns accounted for 5,923 foreign corporations, representing 56 percent of all controlled foreign corporations and their subsidiaries, or half of all controlled foreign corporations and nearly three-fourths of all subsidiaries of controlled foreign corporations. Furthermore, these 5,923 foreign corporations accounted for 90 percent of both the net profit and total assets of all foreign corporations.

As is evident from table 4B, 70 percent of the 10,539 foreign corporations for which Forms 2952 were filed were first-tier controlled foreign corporations; the re-

Chart 4C. Percentage distribution of number and net profit of controlled foreign corporations and their subsidiaries, by size of total assets of domestic corporation, 1962

Note: Figures may not add to 100 percent due to rounding.

NOTE: Detail may not add to total due to rounding

maining 30 percent were second-tier subsidiaries controlled by first-tier foreign corporations. The first-tier controlled foreign corporations accounted for over 80 percent of both the total assets and net profit of all foreign corporations.

Domestic corporations classified in Manufacturing dominated the foreign activity. They controlled 71 percent of all controlled foreign corporations and their subsidiaries, which in turn had 76 percent of the total assets of all foreign corporations. Although one-third of these foreign corporations were second-tier subsidiaries, the subsidiaries had less than one-fifth of the total assets of all the foreign corporations controlled by domestic Manufacturing corporations.

As can be seen in table 4B, the percentage of total assets in first- and second-tier subsidiaries varied considerably by industry. The share of total assets held by second-tier subsidiaries of domestic Manufacturing corporations ranged from 10 percent in Rubber and miscellaneous plastics products to 31 percent in Paper and allied products.

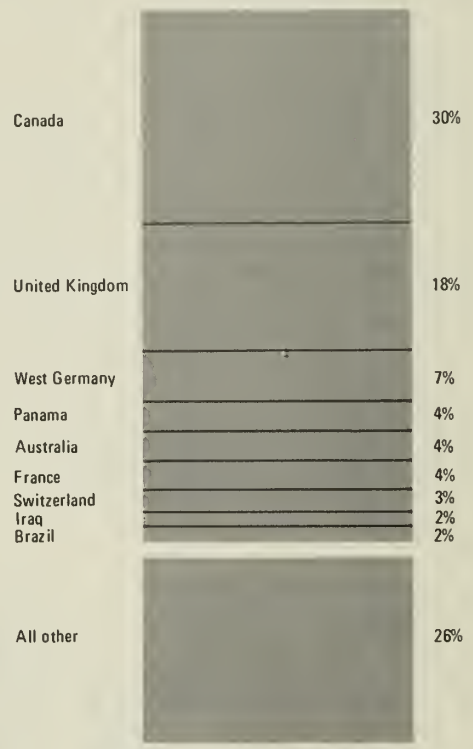

There is no clear relationship between the relative proportion of total assets held by first- and second-tier foreign corporations, respectively, and the degree of similarity between the industrial activity of the domestic parent corporation and that of its foreign corporations. This is illustrated by comparing table 4B to table 18 which, in addition to classifying data on foreign corporations by the industrial activity of the domestic corporation, also cross-classifies the data by the industrial activity of the foreign corporation. For example, table 4B shows that a relatively high proportion of foreign subsidiary assets of domestic corporations classified in Paper and allied products as well as in Primary metal industries are in second-tier foreign corporations. However, table 18 shows that more than 70 percent of the assets of foreign corporations controlled by domestic corporations classified under Paper and allied products belonged to foreign corporations also classified in that industrial group. On the other hand, only about 25 percent of the total assets of foreign corporations controlled by domestic corporations classified under Primary metal industries were also classified in that major industrial group. The remaining 75 percent of the total assets belonged to foreign corporations classified in other industrial activities, such as Mining (26 percent), Wholesale trade (17 percent), and Transportation (11 percent).

Profits, Taxes, and Dividends of Foreign Corporations, by Country of Incorporation

Controlled foreign corporations and their subsidiaries were incorporated in more than 85 countries of the world. However, a small number of countries accounted for the major share of the foreign activity of United States corporations. As shown in chart 4D, firms incorporated in three countries--Canada, United Kingdom, and West Germany--earned 55 percent of the net profit of all foreign corporations. The corporations in all nine countries shown in chart 4D earned 74 percent of the net profit of all foreign corporations. Data for ten additional countries are presented in chart 4E. Corporations in these 19 countries earned 90 percent of the net profit and represented 82 percent of all foreign corporations.

Controlled foreign corporations and their subsidiaries

Chart 4D. Net profit before taxes, by selected country of incorporation, 1962

Net profit before taxes $4,516,193,000

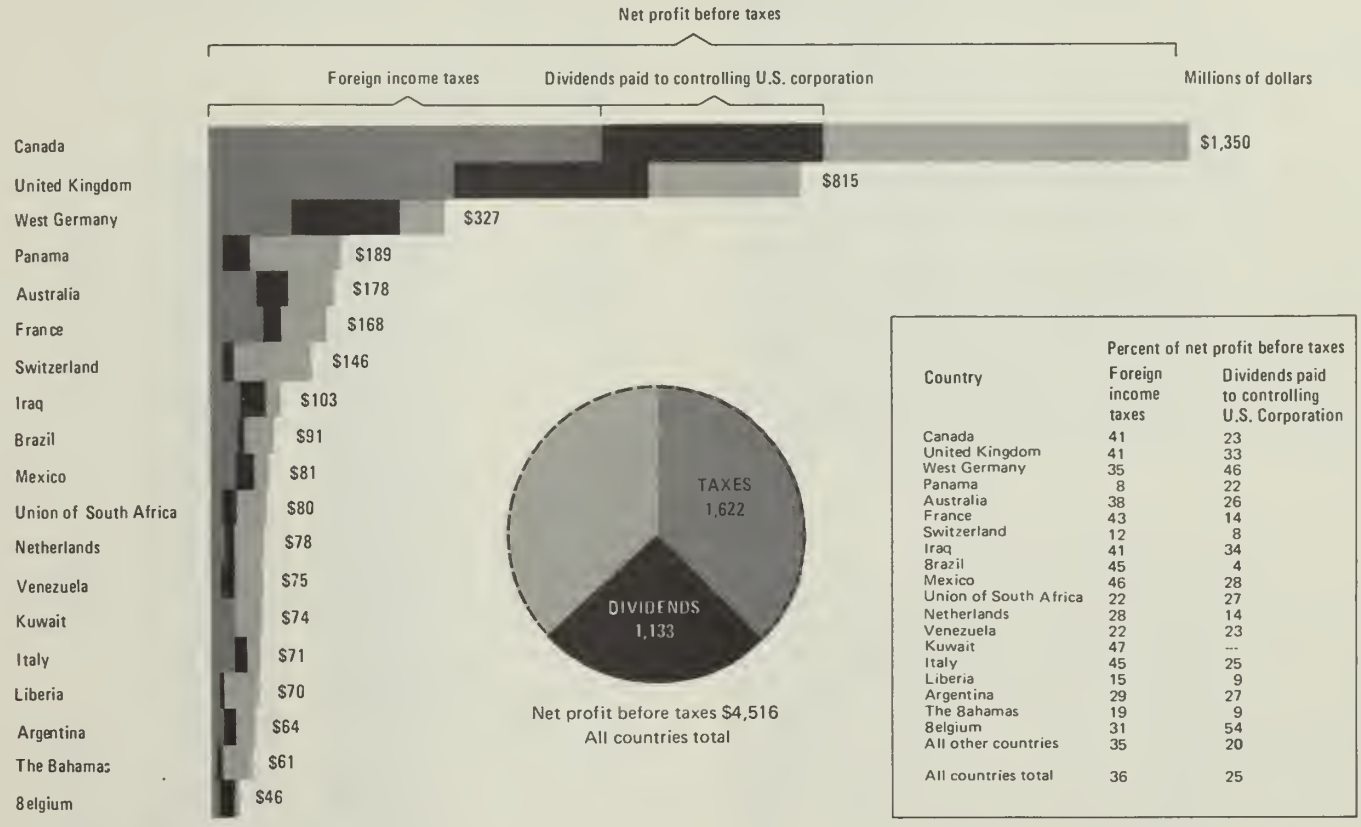

It should be noted that chart 4E shows combined data for both controlled foreign corporations and their subsidiaries. If only the first-tier controlled foreign corporations were shown, it would be evident that they account for virtually all the dividends shown as paid to United States parent corporations. The second-tier corporations (subsidiaries of controlled foreign corporations) pay substantially all of their dividends to the first-tier corporations. However, the amount of these foreign intercompany dividends was not tabulated. In fact, some overstatement of total profits of all foreign corporations stems from the doublecounting of profits by the amount of subsidiary dividends included in the profits data of both first- and second-tier foreign corporations. Some of the corporations included in chart 4E had their principal place of business outside their country of incorporation and accordingly earned income in and paid taxes to these other countries. These topics are treated in greater detail below.

Distinguishing between first- and second-tier foreign corporations

Chart 4E shows that of the $4,516 million in net profit before taxes for all controlled foreign corporations and their subsidiaries, 36 percent ($1,622 million) was paid in foreign income taxes and 25 percent ($1,133 million) was remitted to United States parent corporations. Sub-

Controlled foreign corporations and their subsidiaries

sidiaries of controlled foreign corporations accounted for 17 percent of both net profit before taxes and income taxes but, as shown in table 13, only 0.5 percent ($6 million) of the $1,133 million paid in dividends to United States parent corporations, since subsidiaries paid most of their dividends to their controlling foreign corporations.

The dividends paid by the subsidiary to the controlling foreign corporation are not shown in the controlled foreign corporations tables, which only show the dividends which were paid directly to the controlling United States corporation. For instance, chart 4E shows that no corporations incorporated in Kuwait paid dividends to United States parent corporations. Actually, as shown in table 22, the one corporation incorporated in Kuwait was a subsidiary of a controlled foreign corporation and did not remit any dividends directly to the United States parent corporation. Any dividends it may have paid to its controlling foreign corporation subsequently could have been remitted by the latter corporation to its domestic parent corporation, but these remittances would appear in chart 4E as coming from another country.

As a direct result of foreign intercompany dividends, the total net profit of controlled foreign corporations and their subsidiaries is somewhat overstated because these profits included the income from dividends received by controlled foreign corporations from their subsidiaries. In effect, that part of the net profit of the subsidiaries which was paid to the foreign corporations which controlled them was double-counted, i.e., as net profit of both the subsidiary and of the controlling foreign corporation.

Controlled foreign corporations alone (i.e., not including the $756 million net profit of their subsidiaries) had net profit before taxes of $3,751 million; paid $1,349 million, or 36 percent, in income taxes; and remitted $1,128 million, or 30 percent, in dividends to controlling United States corporations. Of course, net profits used to pay foreign income taxes were not available for repatriation. Thus, net profit *after taxes* of controlled foreign corporations (excluding subsidiaries), was $2,402 million, and dividends repatriated to controlling United States corporations represented 47 percent of this amount. Furthermore, if *all* dividends remitted by controlled foreign corporations to United States corporations (to parent corporations as well as to other shareholders) were taken into account, the percentage remitted would have been even higher than 47 percent, since neither the $6 million paid by the foreign subsidiaries nor the $1,128 million paid by the controlled foreign corporations included dividends paid to United States corporations with a less than controlling interest.

Omission of foreign branch activity of domestic corporations

Since this section concerns only foreign corporations, the data do not give a complete picture of all the foreign activity of domestic corporations. The most significant omission from these data is the foreign branch profits of domestic corporations. For example, according to chart 4E, corporations incorporated in Venezuela reported $75 million in net profit, and from table 24 it is apparent that about one-tenth of this was earned in the extraction of crude petroleum. However, this does not reflect Venezuela's true role in the foreign oil-extractive operations of United States corporations because oil operations are conducted in Venezuela mainly through branches of domestic corporations rather than foreign subsidiaries. These branch profits are reported as taxable income from foreign sources by United States corporations claiming a foreign tax credit. Data on the foreign tax credit are included in another section of this report. (See also the discussion of Forms of operation in the Explanation of Terms.)

Dividend payments and tax rates

Taxes as a percent of net profit before taxes, as shown in chart 4E, sometimes are not representative of countrywide statutory rates. Among the reasons for this disparity are: the differences between taxable income defined by a country and net profit defined according to accounting principles used by domestic corporations; taxes paid to countries other than to the country of incorporation; and lower or no taxes on income coming from outside the country or on income earned in certain industrial activities within a country.

Repatriation of dividends by controlled foreign corporations often appeared to be largely contingent on the level of taxes in the country of incorporation. Chart 4E shows that controlled foreign corporations in Panama, Switzerland, Liberia, and the Bahamas, where taxes were a relatively small percentage of net profit, remitted a relatively small part of their net profit to United States corporations. Receiving dividends from its foreign corporations in these four countries generally would have resulted in higher taxable income from foreign sources for the United States corporation, but its foreign tax credit would not have increased proportionately because the taxes on the remitted income were so low. Consequently, the net tax liability for the United States corporation would have increased. For the majority of countries shown in chart 4E whose income taxes appeared to be about 25 percent or more of net profit before taxes, the controlled foreign corporations remitted to their domestic parent corporations at least a quarter of their net profit before taxes.

An important exception to this relationship between tax rates and rates of repatriation was Brazil, where corporations appeared to be paying 45 percent of their net profit in income taxes, yet remitted only 4 percent of their net profit to directly controlling United States corporations. Several factors inhibited Brazilian corporations from paying dividends to United States corporations. First, all income remitted to residents abroad was subject to a 25 percent Brazilian tax plus a surtax of 15 percent. Second, all remittances required prior official approval of the Brazilian government. Third, annual profit remittances were limited to 10 percent of registered capital.

Corporations in West Germany repatriated an unusually high proportion of their net profit before taxes--46 percent. In terms of net profit *after* taxes, first-tier controlled foreign corporations in West Germany remitted 80 percent of their available profits to controlling United States corporations. Two factors largely accounted for the unusually high rate of repatriation of profits. First, undistributed profits were subject to a 51-percent tax, but distributed profits, to only a 15-percent tax. Clearly there was an incentive to distribute these profits. Second, although there was a 25-percent dividend tax on these distributions, a tax treaty with the United States reduced the dividend tax to 15 percent, provided the United States corporation receiving dividends owned 10 percent or more of the voting stock in the paying German corporation and had no permanent establishment in West Germany (see Explanation of Terms for definition of Permanent establishment). The distribution of profits combined with the foreign tax credit provisions of the United States Internal Revenue Code generally would have resulted in a lower total of both West German and United States taxes than if the German corporation had not distributed its profits. If the West German corporation had needed funds for working capital or other investment, these repatriated profits could have been reinvested by the United States corporation in its West German corporation.

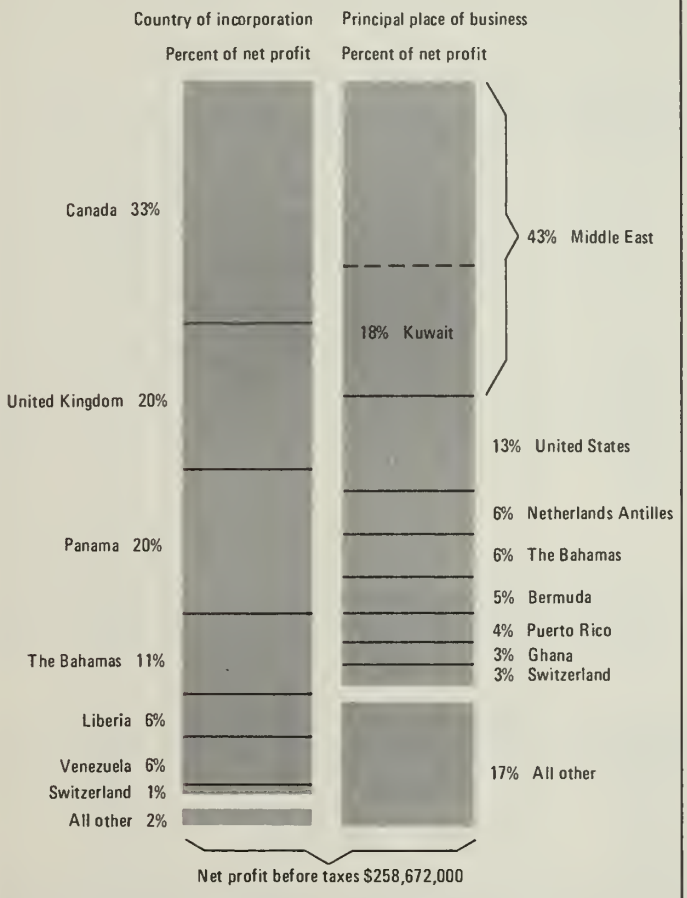

Sometimes a few large corporations in a particular industry greatly affected the financial data for a country. The following two examples illustrate this point: In Belgium, a few corporations principally engaged in producing Motor vehicles and motor vehicle equipment accounted for 38 percent of all net profit before taxes of corporations in Belgium, but paid 74 percent of the dividends paid to controlling United States corporations. If the financial data for this industry are excluded from the totals for Belgium, dividends as a percent of net profit before taxes drops from the 54-percent level shown in chart 4E to only 22 percent. The second example, somewhat less significant than the first, concerns the few corporations incorporated in the Netherlands that were principally engaged in producing Electrical machinery, equipment, and supplies. Although these few corporations earned 29 percent of the profits earned by all foreign corporations incorporated in the Netherlands, they did not pay any dividends to controlling United States corporations. When the financial data for this one industry are excluded from the totals for the Netherlands, dividends as a percent of net profit before taxes increases from the 14-percent level shown in chart 4E to 20 percent.

Principal place of business outside of country of incorporation

When data are classified by country of incorporation, as in charts 4D and 4E, some over- or understatement occurs for actual activity conducted within a particular country, i.e., corporations incorporated in one country conduct some or all of their business outside the country of incorporation. About $259 million (6 percent of all net profit) was earned by foreign corporations whose principal place of business was outside the country of incorporation.

Principal place of business outside country of incorporation

Chart 4F. Net profit before taxes of controlled foreign corporations and their subsidiaries, by country of incorporation and principal place of business, 1962

Note: Figures may not add to 100 percent due to rounding

Chart 4F shows the distribution of the net profit by country of incorporation and by principal place of business. For example, firms incorporated in Canada but with principal place of business outside of that country accounted for 33 percent of the $259 million. These firms had their principal place of business located in one or more of the countries shown on the right in chart 4F.

Although net profits that were earned principally outside the country of incorporation were relatively insignificant when compared to the net profit of all corporations incorporated in such countries as Canada or the United Kingdom, they were a relatively significant factor in some other countries. For example, a comparison of the data in tables 22 and 28 shows that between 20 and 48 percent of the net profit of corporations incorporated in Venezuela, Liberia, Panama, and the Bahamas was earned by corporations whose principal place of business was outside their country of incorporation. Table 22 includes all corporations by their country of incorporation, and table 28 includes by country of incorporation only those with their principal place of business outside the country of incorporation.

When one looks at the reverse side, the results can be even more significant. For example, when the profits data in tables 22 and 29 are combined, it can be seen that only about 10 percent of the net profit reported as earned in the Netherlands Antilles and Ghana was earned by corporations incorporated in these countries. Table 29, which classifies the corporations by principal place of business (when outside the country of incorporation) shows that the other 90 percent was earned by corporations incorporated in other countries. Consequently, the tables in this section showing foreign income of controlled foreign corporations and their subsidiaries by the country of incorporation do understate the activity in these two countries. Understatement also occurs for Puerto Rico and Bermuda, and for Kuwait and other areas of the Arabian Peninsula (excluding Saudi Arabia) in which the extraction of crude petroleum predominates. (See also the discussion under Geographic classification: area or country in the Explanation of Terms.)

Closely associated with principal place of business outside of the country of incorporation was the payment of taxes to countries other than to the country of incorporation. For corporations incorporated in countries where taxes were a low proportion of net profit--Panama, Switzerland, Liberia, and the Bahamas--it was particularly true that some or all of the taxes paid by these corporations were paid to countries other than the one in which they were incorporated. For example, the Bahamas did not have income or withholding taxes. Yet according to chart 4E, income taxes were 19 percent of net profit. That these taxes were paid to other countries can be partially ascertained from an examination of table 27 which shows only those foreign corporations with their principal place of business within the country of incorporation. Foreign corporations incorporated in the Bahamas with principal place of business *within* the Bahamas accounted for nearly half of the net profit of corporations incorporated there. However, these corporations paid income taxes amounting to only about 1 percent of net profit before taxes. Consequently, these statistics clearly show that nearly all taxes paid by corporations incorporated in the Bahamas were paid by corporations with principal place of business in other countries. Thus for some countries in chart 4F, taxes as a percent of net profit before taxes are not a valid indicator of the country's tax rates.

Industrial Activity of Foreign Corporations

The domestic corporation's diverse industrial activities were not evident in data classified by the industry of the domestic corporation because the return was classified by the business activity accounting for the largest portion of business receipts, even though the return might have been for a corporation engaged in many business activities or might have been a consolidated return which included corporations in different business activities. Since foreign subsidiary corporations (with the exception of certain wholly owned subsidiaries in Canada and Mexico) could not be included in the domestic corporation's consolidated return, classification of these subsidiary corporations by their own industrial activity

provides a picture of the diverse foreign business activities being conducted by domestic corporations. However, a foreign corporation could also have had business activities other than the principal one in which it was classified. For the larger foreign corporations, this diversification into minor business activities probably was more pronounced, as was the case for the larger domestic corporations.

Mining activity

Domestic corporations have made substantial investments in foreign mining activities. Table 4C shows that foreign corporations in three countries--Canada, Iraq, and the United Kingdom--accounted for over half of the $302 million in Mining profits. Although Mining profits were only about 5 percent of all foreign corporation prof-

its in Canada and the United Kingdom, they constituted 60 percent of all foreign corporation profits in Iraq.

A more complete picture of Canada's role in the oil operations of foreign subsidiaries of United States corporations would include those corporations classified in Manufacturing: Petroleum refining and related industries. These Canadian corporations accounted for 17 percent of the profits of all foreign corporations incorporated in Canada and 70 percent of the profits of all foreign corporations classified in this industrial activity.

Primarily because of depletion allowances in the extractive industries, domestic corporations often obtained mineral resources through foreign branch operations rather than through foreign subsidiary corporations. Branch operations of domestic corporations engaged in mining activities in such countries as Chile, Iran, Kuwait, Saudi Arabia, and Venezuela, where domestic corporations derived large amounts of taxable income, are not included in this study of controlled foreign corporations but are shown in the foreign tax credit tables. The role of foreign branches and subsidiaries is more fully discussed under Forms of operation in the Explanation of Terms.

Manufacturing activity

About 43 percent of all controlled foreign corporations or subsidiaries were principally engaged in Manufacturing. As seen in table 4C, these corporations accounted for 56 percent of total net profit before taxes. Manufacturing profits accounted for at least 60 percent of all profits earned by corporations incorporated in each of the following 10 countries: Canada (68 percent), United Kingdom (60 percent), West Germany (66 percent), Australia (78 percent), France (62 percent), Brazil (72 percent), Mexico (72 percent), Netherlands (74 percent), Italy (69 percent), and Argentina (69 percent). Although net profit of corporations in Canada and the United Kingdom together accounted for 48 percent of the profits of all foreign corporations, Manufacturing corporations in Canada and the United Kingdom accounted for 56 percent of the profits of all Manufacturing corporations. These two countries also had incorporated within their boundaries three-fifths of the 59 foreign corporations with total assets of $100 million or more. These 59 corporations accounted for one-quarter of all net profit of controlled foreign corporations and their subsidiaries.

Three Manufacturing industries--Motor vehicles and motor vehicle equipment, Chemicals and allied products, and Petroleum refining and related industries--accounted for almost one-half of the profits in Manufacturing and over one-quarter of the profits of all controlled foreign corporations and their subsidiaries. The high capital investment in these three industries was reflected by the fact that 22, or more than one-third, of the 59 large foreign corporations with total assets of $100 million or more were principally engaged in these industrial activities. These 22 large foreign corporations accounted for more than half of the profits earned in these three industries and more than one-quarter of the Manufacturing

Controlled foreign corporations and their subsidiaries

Chart 4G. Total assets of foreign corporations classified by industrial activity of both the domestic corporation and the foreign corporation, 1962

profits of all foreign corporations. Corporations in Canada and the United Kingdom accounted for nearly one-half of all profits earned in the Motor vehicles and motor vehicle equipment industry and over one-half in the other two largest Manufacturing industries. Corporations in these two countries also accounted for more than half of the profits in Food and kindred products; Paper and allied products; Fabricated metal products; and Machinery, except electrical and transportation equipment.

Other nonmanufacturing activities

The predominance of corporations incorporated in Canada and the United Kingdom was also apparent in some nonmanufacturing activities. Corporations in these two countries earned over one-third of all Wholesale and retail trade corporation profits. In Holding and other investment companies, nearly 60 percent of the profits were earned by corporations incorporated in the United Kingdom (39 percent) and Canada (20 percent).

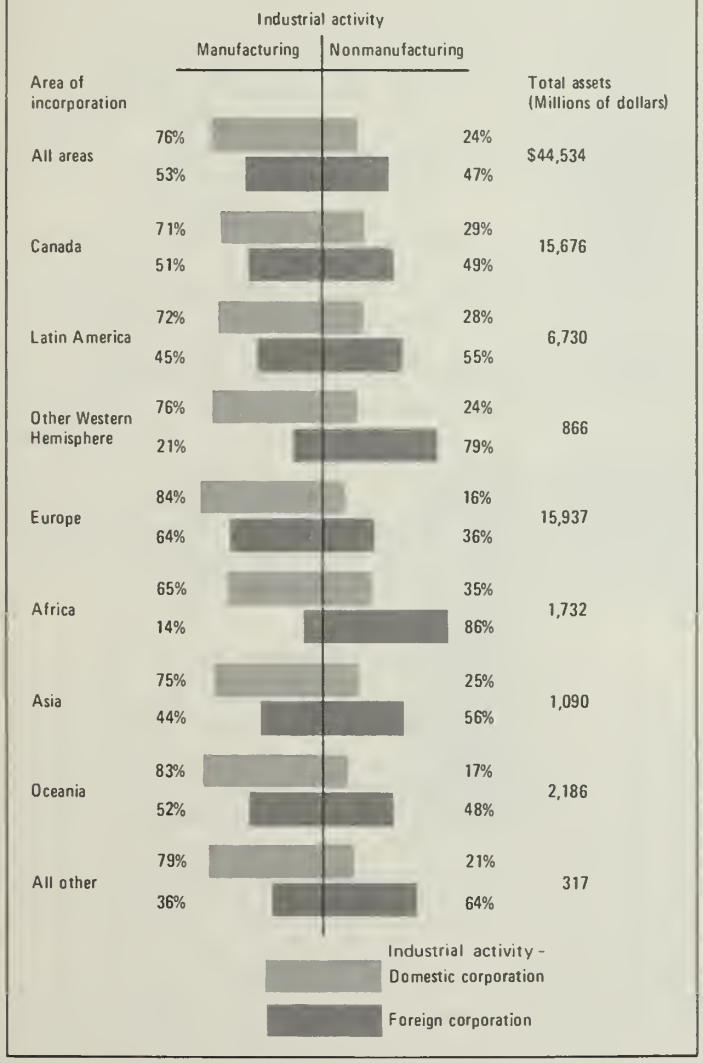

Nonmanufacturing corporations in certain other countries, although having smaller amounts of net profit, were significant in terms of the net profit of all controlled foreign corporations and their subsidiaries incorporated in these countries. For example, Trading corporations in Panama and Switzerland combined earned only 16 percent of all Trading profits, but 33 percent and 44 percent, respectively, of all profits of controlled foreign corporations and their subsidiaries incorporated in each country. In Transportation, corporations in Panama and Liberia together accounted for over one-half of all profits of controlled foreign corporations and their subsidiaries principally engaged in this activity. Much of the Transportation activity occurred in the shipping of petroleum and other minerals. In Business services, corporations incorporated in West Germany earned over one-quarter of all net profit, almost as much as similarly engaged corporations incorporated in Canada and the United Kingdom combined.

Industrial Activity of Both Foreign and Domestic Corporations

Charts 4G and 4H present data for foreign corporations classified by the industrial activity of both the foreign corporation and the domestic corporation. Table 4D and chart 4G together show 7,513 foreign corporations with total assets of $33,938 million classified in Manufacturing because the controlling domestic parent corporation was classified as principally engaged in Manufacturing. However, only 4,228 of these foreign corporations, with total assets of $22,058 million (table 18), were actually principally engaged in Manufacturing.

Controlled foreign corporations and their subsidiaries

Controlled foreign corporations and their subsidiaries

Chart 4I. Percentage distribution of number, total assets, and net profit of foreign corporations, by year in which incorporated, 1962

Note: Figures may not add to 100 percent due to rounding.

In other words, 3,285 (7,513 less 4,228) foreign corporations with total assets of $11,880 million ($33,938 million less $22,058 million) were classified as principally nonmanufacturing corporations controlled by domestic Manufacturing corporations. Therefore, although domestic Manufacturing corporations controlled 4,228 foreign Manufacturing corporations, domestic Manufacturing corporations also controlled 3,285 nonmanufacturing foreign corporations which, when classified by their principal business activity, were in the following nonmanufacturing industrial divisions: 62 in Agriculture, forestry, and fisheries; 160 in Mining; 68 in Construction; 163 in Transportation, communication, electric, gas, and sanitary services; 1,841 in Wholesale and retail trade; 454 in Finance, insurance, and real estate; 331 in Services; and 207 in Nature of business not allocable.

The degree to which foreign corporations were engaged in manufacturing varied substantially among the geographic areas. As shown in chart 4H, foreign corporations principally engaged in manufacturing ranged from accounting for only 14 percent of the total assets of these firms in Africa to a high of 64 percent in Europe. This variation contrasted with the uniformly large proportion of control by United States parent corporations principally engaged in manufacturing. By classifying the assets of the foreign corporations in terms of the industrial activity of the United States parent--the second set of bars in chart 4H--we see that two-thirds or more of the assets of foreign corporations in every geographic area were controlled by parent corporations engaged in manufacturing.

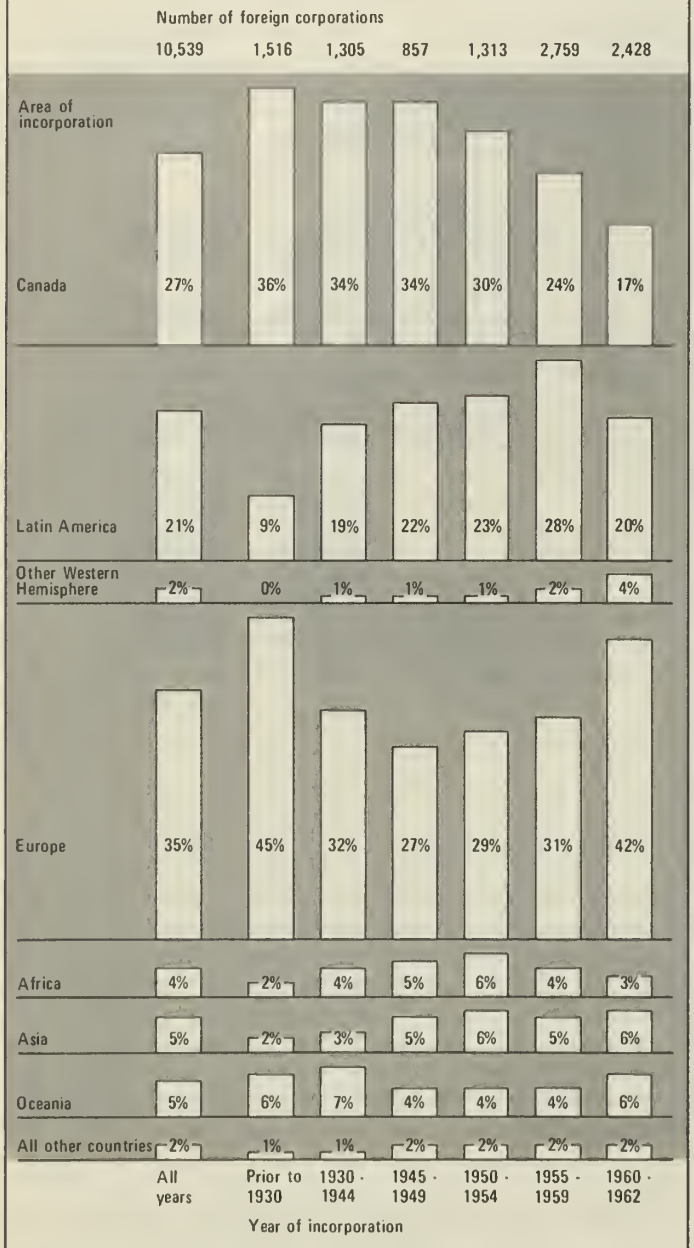

Year of Incorporation of Foreign Corporations

As shown in chart 4I, nearly one-half of the controlled foreign corporations and their subsidiaries were incorporated during the eight-year period 1955 through 1962, yet these corporations had only 20 percent of the total assets and net profit of all foreign corporations. About one-half of the total assets and net profit were accounted for by the 1,516 foreign corporations (less than 15 percent of the total) incorporated before 1930.

In the initial years of operation, losses often exceeded profits. The prevalence of losses in the beginning years is underscored by the fact that total net losses exceeded total net profit (after taxes) for corporations incorporated during the period of 1960 through 1962 in the following countries listed in chart 4E: United Kingdom, West Germany, Australia, France, Mexico, Union of South

Controlled foreign corporations and their subsidiaries

Chart 4J. Percentage distribution of number of foreign corporations, by year of incorporation and by geographic area, 1962

Notes: Figures may not add to 100 percent due to rounding.
Geographic area detail is not included for 358 corporations for which year of incorporation was not reported.

Africa, Venezuela, Italy, and Belgium. However, net profit substantially exceeded net losses for corporations incorporated during the same period in countries with low or no taxes on income from outside the country (and in which this income was a major factor)--Panama, Switzerland, Liberia, and the Bahamas.

If a foreign corporation was *established* by a domestic corporation, the year of incorporation equaled year of control. For a foreign corporation *acquired* by a domestic corporation, however, year of incorporation may have occurred before the time the United States corporation acquired control. Consequently, a foreign corporation incorporated before 1930 may have become controlled by a United States corporation at a much more recent date. It follows that in addition to the half of all foreign corporations incorporated during the eight-year period of 1955 through 1962, the domestic corporation could have acquired control during this period over foreign corporations incorporated before 1955. Consequently, earlier periods of incorporation may not be indicative of the time the United States corporation actually acquired control.

Chart 4J shows that as of 1962, the largest share of foreign corporations--35 percent--was incorporated in Europe; Canada was second in importance with 27 percent. However, for each period between 1930 and 1954, Canada predominated in number of incorporations. For example, during the period 1945 through 1949, 27 percent of the 857 incorporations were in Europe, and 34 percent in Canada. The trend changed during the 1955-1962 period. Between 1960 and 1962, 42 percent of the 2,428 incorporations were in Europe, and 17 percent in Canada. Consequently, even though the average annual number of incorporations in Canada increased, Canada's relative share went down and Europe's increased.

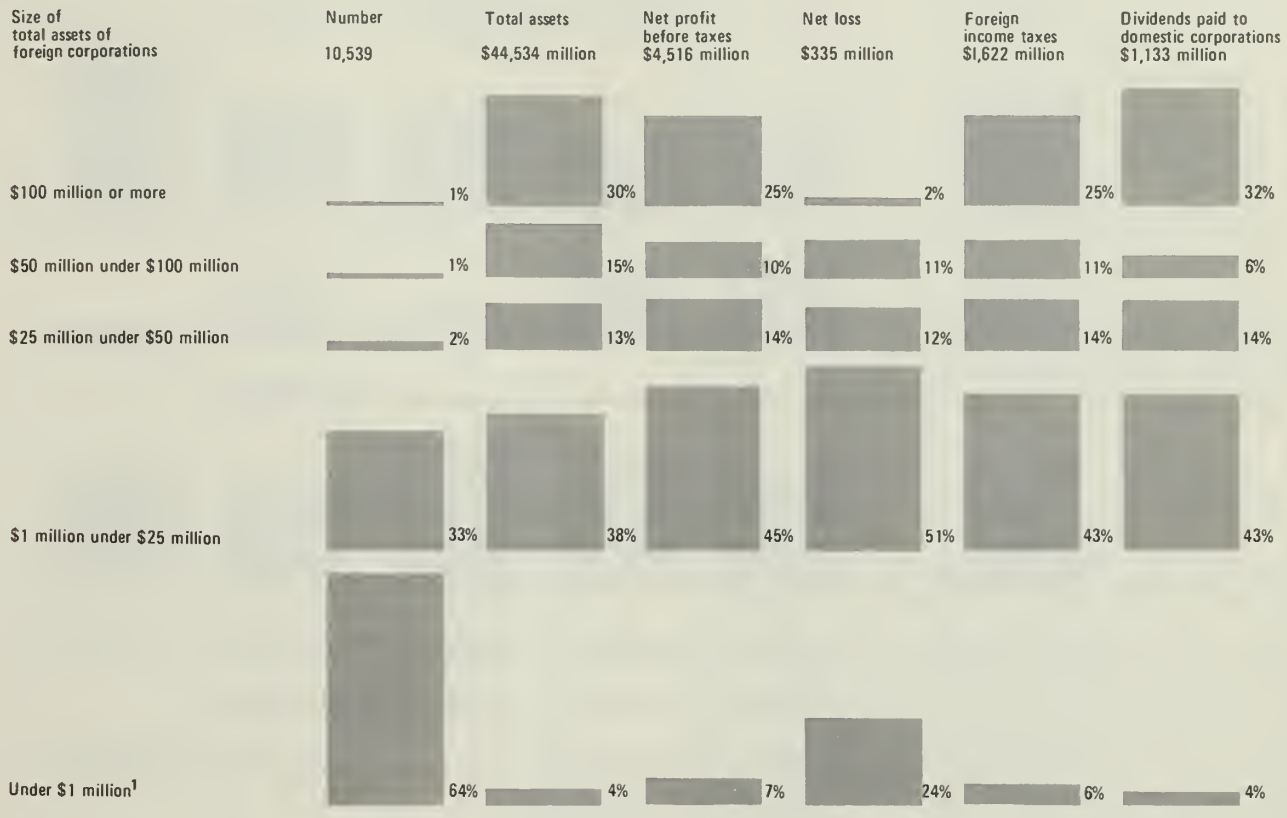

Size of Total Assets of Foreign Corporations

Charts 4K and 4L and table 4E present data classified by the size of total assets of the controlled foreign corporation or its subsidiary. Chart 4K shows the relationship of foreign corporations in each asset-size class for the number of corporations, their total assets, and other selected financial items; chart 4L presents the relative distribution of the various asset-size classes by geographic area; and table 4E shows the percentage distribution of asset-size classes in each size class for 17 countries which are included among the 19 countries in chart 4E. Table 4E which lists countries in the order of the size of total assets of foreign corporations, does not include Iraq and Kuwait because the small number of corporations incorporated there had low assets although they had relatively high profits.

Much of the financial activity was clearly attributable to foreign corporations in two asset-size classes. Corporations with over $100 million in total assets and those with $1 million to $25 million in total assets accounted for nearly 70 percent of the total assets, net profit, and taxes, and for 76 percent of all the dividends paid to controlling domestic corporations. There were only 59 foreign corporations with over $100 million in total assets, and these accounted for less than 1 percent of the total number of foreign corporations. However, they accounted for 25 percent of net profit and only 2 percent of net loss, whereas the 6,136 corporations reporting assets under $1 million had less than 5 percent of net profit but more than 20 percent of the net loss. Foreign corporations incorporated in Canada as well as those in Europe each accounted for 36 percent of the total assets of all corporations. Although 35 percent of all foreign corporations were incorporated in Europe, only 27 percent were incorporated in Canada. The main reason for this dif-

NOTE: Detail may not add to total due to rounding

ference can be found in the location of the 59 very large corporations--those with assets of $100 million or more. Of the $13.5 billion in assets held by these 59 corporations, 50 percent was held by corporations incorporated in Canada, and 36 percent, by those incorporated in Europe.

Controlled foreign corporations and their subsidiaries

Chart 4L. Percentage distribution of total assets of foreign corporations, by size of total assets and by geographic area of incorporation, 1962

Note: Figures may not add to 100 percent due to rounding.

Table 4E presents for 17 countries a percentage distribution of the total assets of foreign corporations by size of their total assets in each of these countries. Firms in the industrialized countries of Canada, United Kingdom, West Germany, and Australia accounted for about 60 percent of the total assets of all foreign corporations. In each of these countries the asset-size class of $100 million or more predominated. However, for nearly all the other countries shown in table 4E, the asset-size class of $1 million under $25 million contained the largest share of assets.

LIMITATIONS OF THE DATA

Coverage

These data reflect the provisions of the Internal Revenue Code prior to amendment by the Revenue Act of 1962 which changed the filing requirements for controlled foreign corporations. Under this new Act, domestic corporations are required to file for at least three or more tiers of controlling ownership in foreign corporations. Also, all controlled foreign corporations, including their foreign subsidiaries and subsidiaries of subsidiaries, have to be included if their accounting periods end within the taxable year of the domestic corporation. In contrast, as discussed above under filing requirements, prior to the Revenue Act of 1962 domestic corporations were required to file for only two tiers of controlling foreign ownership, and only when the accounting period of the second-tier subsidiary ended within that of the first-tier foreign corporation, and the accounting period of the first-tier foreign corporation ended within the taxable year of the domestic corporation.

The number of controlled foreign corporations and their subsidiaries shown in this report may differ from the number actually controlled by domestic corporations with accounting periods ended July 1962 through June 1963. First, domestic corporations only needed to file Forms 2952, "Information Return by a Domestic Corporation

with Respect to Controlled Foreign Corporations," for those controlled foreign corporations and their subsidiaries whose accounting periods began after December 31, 1960. Although the extent of the undercoverage resulting from this is not known exactly, it is believed to be negligible. Second, undercoverage may have resulted from foreign corporations that were newly controlled in 1962 or 1963 by a domestic corporation, but had accounting periods ending after the taxable year of the filing domestic parent corporation.

There was probably little nonfiling, because failure to file Form 2952 does result in a loss of some or all of the foreign tax credit for creditable foreign taxes of the controlled foreign corporations and their subsidiaries. In addition, criminal penalties are provided for failure to file even when there are no creditable foreign taxes.

Comparability of the Data

Generally, aggregate financial data for any one country in this study were comparable to aggregate financial data for any other country. However, some noncomparability in the data may have occurred for the following reasons:

(1) Generally accepted accounting principles of United States parent corporations often provide alternative accounting practices. Thus, even the accounting statements of two domestic corporations, both prepared according to accepted but differing accounting principles, may not be comparable. When comparing the accounting statements of two controlled foreign corporations in the same country but with different domestic parents, noncomparability may exist because each controlled foreign corporation's accounting statements may have been translated and recast to conform with generally accepted accounting principles of its domestic parent corporation.

(2) Controlled foreign corporations are subject to the established accounting principles of foreign countries. These principles may differ somewhat between countries. Consequently, accounting statements of foreign corporations incorporated in different countries may not be comparable. Recasting and translating these foreign accounting statements to conform to the accounting principles of the domestic corporation should have alleviated this noncomparability. However, as mentioned in the Introduction to this section, some foreign accounting statements which were not recast were included in the controlled foreign corporation tables.

Understatement or Overstatement of Specific Items of Data

The discussion below, which concerns the noncomparability of specific items of data due to differing accounting principles of foreign countries, pertains to accounting statements which were not completely recast to conform to the generally accepted accounting principles of the domestic corporations. Although foreign accounting statements were to have been recast to conform to these principles, not all statements were recast. Estimates are not available on just how much noncomparable data are included because of nonconforming foreign accounting principles.

Dividends

Dividends reported as paid by controlled foreign corporations may differ from the amount of foreign dividends received by domestic corporations. For two reasons, the domestic corporation normally received more foreign dividends than its controlled foreign corporations reported paying. First, and most obvious, was that the domestic corporation income tax return included dividends from all foreign corporations regardless of the degree of ownership. Second, the domestic corporation receiving the dividends from the controlled foreign corporation may have been included in a consolidated income tax return with one or more domestic corporations who were minor shareholders in the controlled foreign corporation. These other domestic corporations also would have received dividends when the controlled foreign corporation made a distribution to its controlling domestic parent corporation. Data in this study concerning dividends paid by controlled foreign corporations reflected only those dividends distributed to the one controlling domestic corporation and excluded dividends distributed to noncontrolling domestic corporations.

However, in some instances, foreign dividends reported as paid by controlled foreign corporations and their subsidiaries exceeded the foreign dividends reported as received on the domestic corporation income tax return. Total dividends paid slightly exceeded foreign dividends received in 10 industrial groups. In 3 of the 10--Construction, Amusement and recreation services except motion pictures, and Other services--the excess was directly attributable to the controlled foreign corporations paying dividends that represented a return of capital. On its income tax return, the domestic corporation receiving the dividend treated this as a return of capital and not as income from foreign dividends, but on Form 2952 for the controlled foreign corporation this amount was treated as a dividend paid. Of all the dividends paid by controlled foreign corporations to their domestic parent corporation, less than 1 percent were ascertained to be a return of capital, although some understatement may have resulted from the lack of designation by the United States parent corporation. Also, dividends from foreign sources reported in schedule C, Form 1120, were not always clearly designated as foreign and as a result, a small amount of foreign dividends may have been mistakenly classified as dividends from domestic corporations. This misclassification apparently did occur in the data for two industrial groups, Food and kindred products and Beverages.

Gross receipts

Gross receipts may have been understated for some countries such as the Netherlands, Sweden, and the United Kingdom because the profit and loss statements of published financial reports in these countries normally do not show sales or the cost of goods sold. In a few instances, it was discovered that gross receipts were missing, and estimates based on net profit were therefore used. It is likely that a few other instances of missing gross receipts were not detected.

Net profit

Foreign accounting principles vary from not providing for certain expenses, such as depreciation of industrial buildings, to provision for expenses not acceptable under generally accepted accounting principles of United States corporations, such as a nearly complete write-off of a long-term fixed asset in the year of acquisition or the provision for profit-equalizing reserves.

Some understatement of net profit occurs because a generally accepted accounting principle of United States corporations provides for the deduction of unrealized foreign exchange losses, but not for the inclusion of unrealized foreign exchange gains, in the computation of net profit.

The combined net profit of controlled foreign corporations and their subsidiaries is slightly overstated because the profits of controlled foreign corporations include dividends received from their subsidiaries. When consolidated financial statements are prepared, generally accepted accounting principles in the United States as well as in many other countries provide for elimination of intercompany dividends. However, these eliminations generally appeared only in the "working papers" developed for the preparation of consolidated statements, and were not reflected in the separate underlying corporate financial statements filed with the Form 2952. According to unpublished data for 1961, the amount of dividends paid by subsidiaries to their controlling foreign corporations was about 10 percent of the amount of dividends paid by the directly controlled foreign corporations to their domestic parent corporations. This 10 percent probably constitutes an upper limit for the overstatement of net profits.

Tax rates in foreign countries

Taxes as a percent of net profit before taxes per financial books of account may differ from taxes as a percent of taxable income in a foreign country and the statutory tax rates in that country. Taxes were paid on income defined under foreign laws which may differ substantially from the United States Internal Revenue Code, but reported net profit was to reflect the generally accepted accounting principles of the domestic corporation. Even in countries such as France, Japan, and Sweden, where accounting income and taxable income were generally the same, the accounting income could have been changed during the recasting of the foreign accounting statement to conform to the generally accepted accounting principles of the domestic corporation. For many other countries, there were differences between the definition of accounting income and that of taxable income. These differences probably remained and may even have been compounded when the foreign accounting statement was recast to conform to the generally accepted accounting principles of the domestic corporation.

Some of the other reasons why the data regarding tax rates may not reflect the actual countrywide statutory rates in various countries are:

(1) Within a country, a controlled foreign corporation may have been subjected to varying levels of local income taxes in addition to the overall statutory income tax. This is analogous to differing levels of state corporation income taxes in the United States. Local taxation of this nature occurred in such countries as Canada, Union of South Africa, and Switzerland.

(2) In some instances, the amount of taxes referred to the tax liability on the prior year's taxable income. For example, in Brazil the provision for income tax in the profit and loss statement represented the tax liability based on the income of the prior year. Profit and loss statements for Denmark also provided for income taxes when paid and not as an expense on current income for the year. Thus, when net profit changed from the previous year, the computed tax rate for a single corporation in Brazil or Denmark did not represent an estimated actual tax rate for the included net profit. It is likely that the overall computed rates for a country would be more representative.

(3) For income earned within some countries, the countrywide income tax rates varied. Various investment incentives in the form of tax concessions were given for investing in certain industries and/or localities of some countries, such as Argentina, Belgium, Mexico, Spain, United Kingdom, Venezuela, and Puerto Rico. In certain other countries, corporations paid a higher income tax because they were active in particular industries. For example, controlled foreign corporations engaged in copper mining in Chile or ones engaged in the mining or petroleum industries in Venezuela often paid higher income taxes than corporations not so engaged.

(4) For some or all income earned outside of some countries, either the income was not taxed or lower differential tax rates were applied. For example, in Canada, corporations incorporated before April 1959 with property (except bank deposits and securities) and operations outside of Canada were exempt from Canadian income tax. In the United Kingdom, corporations designated as Overseas Trade Corporations received tax concessions on foreign source income. In Venezuela, corporations were not taxed on profits earned outside of the country. Controlled foreign corporations in Liberia were not taxed on their income derived from sources outside of Liberia. In Spain, corporations operating exclusively abroad were taxed at about one-half of the flat tax rate. Switzerland and Liechenstein provided various tax reliefs to corporations deriving their income outside those countries. All corporations organized in Panama and conducting business outside of that country paid no Panama corporate income tax.

Not only may a computed tax rate not have reflected the average tax rate in these countries because outside income was not subject to tax, but the taxes that were included as paid may have been paid to another country. For example, in the Bahamas and Bermuda there are no corporate income taxes, yet the data for these two countries show that corporations incorporated there were paying income taxes. Evidently corporations in these two countries were paying income taxes to other countries.

Total assets

In a few countries total assets may be understated for industrial groups in which inventories represented a relatively large part of total assets and these inventories

were written down. For example, according to accounting principles in Denmark, inventories could be written down by as much as 35 percent below the lower of cost or market. In Sweden, inventories could be written down by as much as 60 percent of the lower of cost or market.

When various types of revaluations of assets have occurred, total assets may have been overstated in such countries as Belgium, Brazil, Chile, France, Italy, Mexico, and Peru. In the Netherlands, replacement values were often used which may or may not have overstated total assets. Overstatement refers to foreign balance sheets having asset values above the original historical cost. The generally accepted accounting principle of United States parent corporations is to use original historical costs.

Country Classification

The income and taxes of the controlled foreign corporations and their subsidiaries shown for a particular country may have included income earned in and taxes paid to other countries because these data were classified by the country under whose laws the foreign corporation was incorporated. Table 28, which presents data for controlled foreign corporations and their subsidiaries with principal place of business outside the country of incorporation, gives some indication of the magnitude of the activities of foreign corporations conducted outside the country of incorporation.

Industry Classification

The industry data in the tables classified by the business activity of the domestic corporation may not accurately reflect the actual industrial activity of the foreign subsidiary. However, the majority of the tables are based on the industrial activity of the foreign subsidiary. In addition, table 18 presents detailed information on the relationship between the industrial activity of the domestic parent corporations and their foreign subsidiaries.

Although sufficient information was generally available to classify *domestic* corporations by the industry accounting for the largest portion of business receipts, information permitting such classification was less adequate for *foreign* corporations. For example, Other manufacturing tends to be overstated in the tables classified by industrial activity of the foreign corporation because it was not always possible to determine which business activity accounted for the largest portion of gross receipts when: (1) two or more manufacturing activities were listed under "principal business activity" and (2) manufacturing was given as the principal business activity without an adequate description of the type of manufacturing activity. For similar reasons, the number of foreign corporations classified as Other wholesalers is also somewhat overstated.

Year of Incorporation

Year of incorporation refers to the year in which the foreign firm was incorporated. Control by the United States parent corporation could have come any time after the date of incorporation. Not shown is the date the parent corporation actually gained control because this information was not required to be reported by the parent corporation.

The period of incorporation for 1960 to 1962 did not include all controlled foreign corporations or their subsidiaries incorporated during this period. Rather, only those that also had accounting periods ending within the accounting period or taxable year of the corporation having controlling ownership of the voting stock were included. As a minimum, all newly incorporated controlled foreign corporations and their subsidiaries with an initial accounting period of 12 months and incorporated after July 1, 1962, would not be included in this study. See also the discussion above on Coverage.

DOMESTIC CORPORATIONS AND CONTROLLED FOREIGN CORPORATIONS AND THEIR SUBSIDIARIES

Table 13.—NUMBER OF DOMESTIC CORPORATION RETURNS AND FOREIGN CORPORATIONS, TOTAL ASSETS, INCOME, TAXES, DIVIDENDS, AND FOREIGN TAX CREDIT, BY MAJOR INDUSTRIAL GROUP OF DOMESTIC CORPORATION

Major industrial group of domestic corporation	Domestic corporations													
	Number of returns	Total assets (Thousand dollars)	Business receipts (Thousand dollars)	Dividends received from foreign corporations		Net income or deficit					U. S. income tax before credits		Foreign tax credit	
				Number of returns	Amount (Thousand dollars)	Total net income (less deficit) (Thousand dollars)	Net income		Net deficit		Number of returns	Amount (Thousand dollars)	Number of returns	Amount (Thousand dollars)

[1]Totals are nonadditive because domestic corporation returns are included in the return count for each country in which they have one or more foreign corporations.
[2]Under $500 per return.
NOTE: See text for explanatory statements and for discussion of limitations of the data.
Detail may not add to total due to rounding.

CONTROLLED FOREIGN CORPORATIONS AND THEIR SUBSIDIARIES

Table 23.—NUMBER OF FOREIGN CORPORATIONS, TOTAL ASSETS, NET PROFIT OR LOSS, TAXES, AND DIVIDENDS, BY YEAR OF INCORPORATION AND BY SELECTED COUNTRY OF INCORPORATION

Selected country of incorporation	Year of incorporation of controlled foreign corporation or subsidiary of controlled foreign corporation											
	Total all years						1960-1962					
	Number of foreign corporations	Total assets (Thousand dollars)	Net profit before taxes (Thousand dollars)	Net loss (Thousand dollars)	Foreign income taxes (Thousand dollars)	Dividends paid to domestic corporation (Thousand dollars)	Number of foreign corporations	Total assets (Thousand dollars)	Net profit before taxes (Thousand dollars)	Net loss (Thousand dollars)	Foreign income taxes (Thousand dollars)	Dividends paid to domestic corporation (Thousand dollars)

INTRODUCTION

The purpose of the foreign tax credit provisions of the Internal Revenue Code is to eliminate double taxation where the domestic corporations are subject to domestic taxes on income from foreign sources as well as foreign taxes on the same income. Under these provisions, the domestic corporation can reduce its domestic income tax liability to the extent of all or a part of the foreign taxes on income earned abroad. However, this reduction may be relatively insignificant when the domestic income tax rates are much higher than the effective foreign income tax rates. In essence, the problem of double taxation may be overshadowed by high domestic taxes on the income of a business operating solely in a foreign country where taxes on income are much lower.

Such a situation existed after America's entry into World War II. Domestic corporate tax rates increased sharply in response to the war effort, whereas taxes imposed by other countries in the Western Hemisphere on the income of their own corporations and on the income of foreign corporations remained substantially lower. At the same time, certain Western European countries established tax preferences in the form of lower taxes on the earnings of their corporations doing business in the Western Hemisphere. As a result, United States corporations doing business in the Western Hemisphere were taxed at a much higher rate than corporations of other countries operating in this area, and could therefore have been at a competitive disadvantage.

In order to alleviate this situation, the Congress granted a reduction in the corporation income tax rate in 1942 to a special class of corporations called "Western Hemisphere trade corporations." The law was somewhat liberalized in 1954, when the Congress amended the 1942 provision which required that a Western Hemisphere trade corporation must do all its business in the Western Hemisphere. The 1954 Amendment permitted incidental purchases outside the Western Hemisphere, incidental purchases being defined in the regulations as purchases which were (1) minor in relation to the entire business or (2) nonrecurring or unusual in nature. In any case, where the aggregate of purchases made outside the Western Hemisphere did not exceed 5 percent of the corporation's gross receipts in the same year, such purchases were deemed incidental.

QUALIFICATIONS AND BENEFITS OF WESTERN HEMISPHERE TRADE CORPORATIONS

The Internal Revenue Code defines the four conditions a corporation must satisfy to qualify as a Western Hemisphere trade corporation [sections 921 and 1504(d)] as follows:

(1) The corporation must be a domestic corporation, i.e., one incorporated in the United States or under the laws of the United States or any State or Territory. However, where a corporation is incorporated and maintained in a contiguous foreign country solely to comply with the laws of that country as to title and operation of property, such foreign corporations, if 100 percent owned by a domestic corporation, may be treated as a domestic corporation. Therefore, some corporations incorporated in Canada or Mexico have been able to qualify as Western Hemisphere trade corporations.

(2) The corporation must do all of its business, other than incidental purchases, in countries of the Western Hemisphere, which include the United States. This does not preclude incidental contacts with countries outside the Western Hemisphere. On the contrary, the legislative history of this provision, as well as Internal Revenue Service regulations, indicates that such contacts are permissible. Interpretation of this provision has permitted sales to customers outside the Western Hemisphere if the title and risk of ownership passed to the buyer in the Western Hemisphere.

(3) At least 95 percent of the corporation's gross income for the three-year period immediately preceding the close of the taxable year must be derived from sources outside the United States. However, if a corporation has been in existence less than three years, the period in which it must meet the "source of income" test starts at the time it is created and ends with the close of the taxable year.

(4) At least 90 percent of the corporation's gross income for the three-year period immediately preceding the taxable year must be derived from the active conduct of a trade or business. The purpose of this condition was to limit qualification for Western Hemisphere trade corporation status to corporations earning income from active businesses, in contrast to those whose chief income was passive investment and occasional sales. Internal Revenue rulings usually have not regarded dividends, interest, or gains from sales of capital assets as income from the active conduct of a business. In general, therefore, a corporation operating solely through foreign subsidiaries would be precluded from obtaining Western Hemisphere trade corporation status since the income of the domestic corporation would be in dividends received from its foreign subsidiaries rather than income from the operation of a business.

A special deduction that may be claimed in computing the taxable income of corporations qualifying as Western Hemisphere trade corporations is defined in Code section 922. This deduction is equal to taxable income, computed in the same way as for all domestic corporations, multiplied by a fraction having a numerator of 14 percent and a denominator equal to the combined normal tax rate plus surtax rate.

In 1962, the combined domestic normal tax rate plus surtax rate was 52 percent, and therefore the above fraction equaled 14/52, or approximately 27 percent. Thus, taxable income computed for Western Hemisphere trade corporations claiming the special deduction was about 27 percent less than the taxable income computed for other domestic corporations. As a result, Western Hemisphere trade corporations could lower their effective tax rate from 52 percent to 38 percent, a reduction of 14 percentage points. This 14-percentage-point reduction is applicable to any year regardless of the statutory rate.

The deduction was not allowed in the following three situations: (1) zero net income, (2) deficit (negative net income), and (3) net income greater than zero minus statutory deductions that resulted in a net operating loss. The last situation probably did not appreciably reduce the number of Western Hemisphere trade corporations taking the deduction because at least 90 percent of the gross income had to be from an active trade or business, leaving only 10 percent from other sources such as dividends. Thus a statutory deduction such as the dividends-received deduction in all likelihood would not have been large enough to result in a net operating loss.

Since the provisions of the Code permit domestic corporations to take credit for foreign income taxes, Western Hemisphere trade corporations were able to take the foreign tax credit as well as the deduction. A Western Hemisphere trade corporation taking the deduction was able to take a foreign tax credit equal to its foreign taxes up to a maximum of its domestic income tax liability, which, as explained above, was 38 percent of taxable income in 1962.

Under the following conditions, advantages would have accrued to the Western Hemisphere trade corporation claiming both the deduction and the foreign tax credit: (1) If the effective foreign tax rate of the corporation had been exactly 38 percent on its taxable income from foreign sources, the corporation could have reduced its domestic tax liability attributable to foreign income to zero by the use of the foreign tax credit; (2) if the effective foreign tax rate had been greater than 38 percent but less than 52 percent, the domestic tax liability attributable to foreign income would also have been reduced to zero by claiming the foreign tax credit; (3) if the effective foreign tax rate had been less than 38 percent, the corporation could have reduced its domestic tax liability attributable to foreign income, but not to zero, since it could only have taken a credit equal to its foreign taxes. For example, an effective foreign tax rate of 25 percent would have left the corporation with a domestic tax liability attributable to foreign income equal to 13 percent (38 minus 25). In other words, whenever the effective foreign tax rate was less than 52 percent, corporations able to claim the Western Hemisphere trade corporation deduction as well as the foreign tax credit gained some advantage compared to other domestic corporations who could take only the foreign tax credit.

On the other hand, if the effective foreign tax rate had been 52 percent or greater, the corporation would not have had an advantage in claiming both the deduction and the foreign tax credit in the current year. Since the corporation could have taken a foreign tax credit equal to its foreign taxes up to a maximum of its domestic tax liability attributable to foreign income in any event, the domestic tax liability attributable to foreign income could have been reduced to zero--whether it was based on an effective domestic tax rate of 38 percent with the deduction, or on an effective domestic tax rate of 52 percent without the deduction. Nevertheless, excess foreign taxes may be available as a carryover or carryback to other years.

However, for Western Hemisphere trade corporations included in a consolidated return in which the overall limitation is used, the portion of their foreign taxes greater than 38 percent and up to 52 percent of their taxable income could not be used in computing the foreign tax credit in the current year or be used as a carryover or carryback [Code section 1503 (d)]. This restriction was imposed so that the foreign taxes of Western Hemisphere trade corporations could not be used as a credit against the domestic tax attributable to the other foreign income of the consolidation.

SUMMARY OF THE DATA

In 1962, the amount of Western Hemisphere trade corporation deduction reached a record high of $236 million compared to a deduction of $141 million in 1954. Since the amount of the deduction is a percentage of taxable income, it changes in proportion to changes in taxable income. Chart 5A shows the amount of the deduction taken

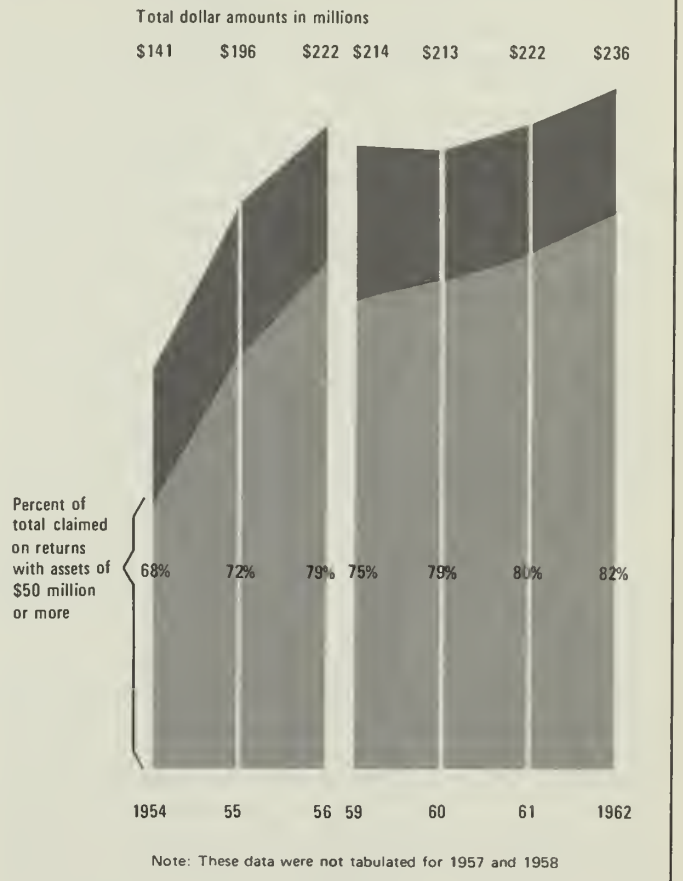

on returns filed for those years from 1954 through 1962 for which data on the deduction were available.

Industrial Activity and Size of Total Assets

Following the pattern of other statistics for domestic corporations with foreign operations, a small number of the large corporations accounted for most of the total Western Hemisphere trade corporation deduction taken. Chart 5A shows that during the period 1954-1962, about 70 to 80 percent of the deduction was consistently claimed on the 23 to 32 returns with assets of $50 million or more. For 1962, the 32 returns with assets of $50 million or more--less than 6 percent of all returns with the deduction--accounted for almost 82 percent of the deduction, an increase from the 68 percent for 1954. The corporations filing these returns claimed $629 million, or over 95 percent of the $656 million of the foreign tax credit claimed by all Western Hemisphere trade corporations (table 32).

Table 5A provides information about the industrial activity of domestic corporations taking the deduction in recent years. The major share of the deduction has always been claimed on returns filed by Manufacturing firms. Since 1959, the share claimed by these firms increased from 59 percent of the total deduction to 72 percent, whereas the comparable percentages in Wholesale and retail trade declined from 12 percent to 9 percent. The dominance of Manufacturing firms was accounted for in part by the inclusion of Western Hemisphere trade corporations whose primary activity was not Manufacturing in consolidated returns which were classified in Manufacturing. Since a consolidated return was classified as a Western Hemisphere trade corporation return

NOTE: These data were not tabulated for 1957 and 1958.
Detail may not add to total due to rounding.

if at least one such corporation was included in the consolidated return, in many instances the industrial classification of these returns, i.e., the principal business activity, did not reflect the industrial activity of the Western Hemisphere trade corporation component. A domestic corporation engaged in Manufacturing usually did not qualify for Western Hemisphere trade corporation status unless the manufacturing took place in the Western Hemisphere outside the United States. If any manufacturing was performed outside the Western Hemisphere, the corporation would not have satisfied the requirement that all its business be done in countries of the Western Hemisphere. If the manufacturing took place in the United States, the corporation usually did not satisfy the requirement that at least 95 percent of its gross income must be derived from sources outside the United States. However, when the classification of a return in Manufacturing was due to the predominance of that corporation's non-Western Hemisphere trade corporation activity in that industry, the Manufacturing could have taken place in the United States or outside the Western Hemisphere. Mining, the second largest industrial division in terms of the amount of the deduction, accounted for varying percentages of the total deduction in the years 1959 through 1962, ranging from a low of 16 percent in 1962 to a high of about 25 percent in 1960.

Table 5B shows the number of consolidated returns and the amount of the deduction claimed on these returns from 1959 through 1962. During these years, consolidated returns with the deduction constituted only 6 to 8 percent of the total number of returns with the deduction, but the percentage of the total amount of deduction taken on consolidated returns increased from 64 to 73 percent, following a pattern similar to that of firms with assets of $50 million or more. For 1962, the 44 consolidated returns showed a deduction of $171.9 million, or 73 percent of the total deduction. The 6 returns with net income of $100 million or more (table 33), all of which were consolidated, accounted for almost one-half of the total deduction taken.

About $120.3 million of the deduction on consolidated returns was in the Petroleum refining and related industries; about $36.6 million, in Primary metal industries. Together, these two industries accounted for over 91 percent of the deduction taken on consolidated returns. Although many of the Western Hemisphere trade corporations included in these consolidated returns were sales subsidiaries of domestic parent corporations classified in these two industries, a considerable amount of the deduction was nevertheless accounted for by Western Hemisphere trade corporations conducting manufacturing and mining operations.

Of the total deduction of $236.1 million taken on all returns, firms in the same two industries as above accounted for the major share (69 percent): firms in the Petroleum refining and related industries claimed $125.5 million; those in Primary metal industries, $36.6 million. Although 322, or more than half of the 571 returns with the deduction, were in Wholesale trade, this industrial division only accounted for $20.2 million, or less than 9 percent of the total deduction (table 31). One reason for the difference in the share of the deduction between returns in Petroleum refining and related industries and Primary metal industries on the one hand, and returns in Wholesale trade on the other, is that 23 percent of the returns in the Petroleum refining and related industries and the Primary metal industries were consolidated returns, whereas consolidated returns made up less than 1 percent of the returns in Wholesale trade.

Table 5B.—RETURNS WITH WESTERN HEMISPHERE TRADE CORPORATION DEDUCTION: TOTAL RETURNS AND CONSOLIDATED RETURNS—NUMBER OF RETURNS AND AMOUNT OF DEDUCTION, 1959-1962

Year	Returns with deduction			Amount of deduction		
	Total returns	Consolidated returns		Total returns (Thousand dollars)	Consolidated returns	
		Number	Percent of total returns		Amount (Thousand dollars)	Percent of total returns
	(1)	(2)	(3)	(4)	(5)	(6)
1959	721	41	5.7	214,763	136,681	63.8
1960	666	44	6.6	212,969	134,634	63.2
1961	598	44	7.4	222,336	157,915	71.0
1962	571	44	7.7	236,102	171,909	72.8

Foreign Tax Credit Claimed

Of the 571 Western Hemisphere trade corporation returns with a deduction for 1962, 300 returns reported $656.3 million in foreign tax credit claimed. Although these Western Hemisphere trade corporation returns comprised less than 6 percent of all returns with a foreign tax credit, they accounted for 42 percent of the $1.6 billion total foreign tax credit claimed. This was primarily attributable to the 25 consolidated returns with assets of $50 million or more which showed a credit of $593.5 million, or 38 percent of the foreign tax credit reported on all returns.

In the discussion of the qualifications and benefits of the Western Hemisphere trade corporations, it was noted that the relationship between the foreign tax credit and the Western Hemisphere trade corporation deduction was such that, in general, claiming both the tax credit and the deduction was permissible, and in many cases advantageous. Yet, while virtually all of the 573 Western Hemisphere trade corporation returns with net income showed the deduction, only 300 indicated a foreign tax credit.

Table 5C.—RETURNS WITH WESTERN HEMISPHERE TRADE CORPORATION DEDUCTION: TOTAL NUMBER OF RETURNS AND RETURNS WITH AND WITHOUT FOREIGN TAX CREDIT, BY SELECTED MAJOR INDUSTRIAL GROUP, 1962

Selected major industrial group	Total returns		Returns with foreign tax credit		Returns without foreign tax credit

$1,000,000 under $50,000,000.	149	100.0	104	69.8	45	30.2
$50,000,000 and over.....	32	100.0	31	96.9	1	3.1

[1]Includes returns with zero assets.
[2]Estimate not shown separately because of high sampling variability. However, the data are included in the appropriate totals.

Table 5C compares the Western Hemisphere trade corporation returns on which both the deduction and the tax credit was shown with those showing only the deduction. Of the 300 corporation returns on which both the deduction and the tax credit was claimed, about 27 percent were classified in Manufacturing; of the 271 returns on which only the deduction was shown, less than 10 percent were in that industry. This difference was mainly due to firms in the Petroleum refining and related industries, all of whose returns showed both the deduction and the tax credit.

Of the 271 corporations claiming only the deduction, about 79 percent were in Wholesale trade compared to only 36 percent of the 300 corporations claiming both the deduction and the tax credit. Many Western Hemisphere trade corporations in Wholesale trade did not claim the foreign tax credit as well as the deduction since they were domestic corporations operating either as sales subsidiaries of other domestic corporations or independent corporations involved solely in export operations, and countries in the Western Hemisphere impose little or no taxes on such export operations.

The percentage of corporations claiming both the deduction and the foreign tax credit increased with size of total assets as shown in table 5D. Of the 139 corporations with total assets under $100,000 which took the deduction, about 85 percent did not claim the tax credit, while of the 32 corporations with total assets of $50 million or more which took the deduction, virtually all claimed the tax credit. Companies involved solely in export sales not only have little or no foreign tax liabilities, but also require relatively smaller amounts of capital assets to operate than companies engaged in manufacturing or manufacturing and sales. The large number of companies involved in only export sales therefore was one reason for the relationship between size of total assets and the percentage with the foreign tax credit.

LIMITATIONS OF THE DATA

Coverage

All Western Hemisphere trade corporations identified as qualifying for Western Hemisphere trade corporation status are included. A statement must accompany the corporation's tax return providing information sufficient to determine whether the requirements of section 921 of the Code have been met. Where a corporation qualified for this status but was unable to take the 27 percent special deduction, it was not always possible to ascertain with certainty whether or not the corporation was in fact a Western Hemisphere trade corporation since not all such returns included the accompanying statement. Because of this, the statistics on the total number of these corporations are somewhat understated.

The understatement in number of corporations was probably concentrated among returns without net income, since without taxable income to reduce no special deduction could be claimed. Another group of corporations contributing to this understatement were those with net income but having net operating losses for the year. Such a net operating loss occurred because the current-year net income was more than offset by one or more of the following:

(1) a net operating loss from a previous year was carried forward;
(2) a statutory deduction was claimed for dividends received, for dividends paid, or both; and
(3) a statutory deduction was claimed for partially tax-exempt interest.

Like the corporations without net income, these corporations could not take the Western Hemisphere trade corporation deduction.

It was previously noted that Western Hemisphere trade corporations were limited as to the amount of dividends or interest they could receive. In addition, the statutory deduction for dividends paid involved only preferred stock of public utility companies; therefore the omission of corporations with net operating losses due to the statutory deductions is likely to be small.

A third source of understatement in the number of corporations was the consolidated Western Hemisphere trade corporation return. A consolidated return may include more than one Western Hemisphere trade corporation. Therefore, since the number of Western Hemisphere trade corporations was based on a count of tax returns, the consolidated returns including more than one Western Hemisphere trade corporation would have resulted in some understatement.

Data Included

The major limitation of these data results from classifying a consolidated return as a Western Hemisphere trade corporation return if at least one such corporation was included in the return. The consolidated returns accounted for almost three-fourths of total deductions taken. Thus, where the Western Hemisphere trade corporations included in consolidations accounted for only a small part of total operations, statistics by industrial activity, size of total assets, and size of net income may be inaccurate to the extent they were affected by the income and deductions of the consolidated return not attributable to Western Hemisphere trade corporations.

In addition, there is some understatement of foreign taxes because taxpayers filing consolidated returns who took the Western Hemisphere trade corporation deduction and the foreign tax credit, using the overall limitation method, were subject to an additional restriction in taking the credit according to section 1503(d). This was discussed above under Qualifications and benefits of Western Hemisphere trade corporations.

Table 31.—NUMBER OF RETURNS, TOTAL ASSETS, NET INCOME, WESTERN HEMISPHERE TRADE CORPORATION DEDUCTION, INCOME SUBJECT TO U.S. TAX, U.S. INCOME TAX BEFORE CREDITS, FOREIGN TAX CREDIT CLAIMED, FOREIGN TAXABLE INCOME, AND FOREIGN TAXES, BY MAJOR INDUSTRIAL GROUP

[1]Includes consolidated returns where one or more of the affiliated corporations within the group was a Western Hemisphere trade corporation.
[2]Estimate is not shown separately because of high sampling variability. However, the data are included in the appropriate totals.
NOTE: See text for explanatory statements and for discussion of limitations of the data.
Detail may not add to total due to rounding.

Table 32.—NUMBER OF RETURNS, TOTAL ASSETS, NET INCOME, WESTERN HEMISPHERE TRADE CORPORATION DEDUCTION, INCOME SUBJECT TO U. S. TAX, U. S. INCOME TAX BEFORE CREDITS, FOREIGN TAX CREDIT CLAIMED, FOREIGN TAXABLE INCOME, AND FOREIGN TAXES, BY SIZE OF TOTAL ASSETS

[1]Revised.
[2]Sampling variability of this estimate is too large to warrant showing separately. However, dats are included in totals.
NOTE: See text for explanatory statements and for discussion of limitations of the dsts. The information for each of the years prior to 1961 appears in the Ststistics of Income--Corporation Income Tax Returns report for that year. The 1961 dsta are from Statistics of Income--1961, Supplemental Report on Foreign Tax Credit Claimed on Corporstion Income Tax Returns.
Detail may not add to total due to rounding.

Table 35.--NUMBER OF RETURNS, WESTERN HEMISPHERE TRADE CORPORATION DEDUCTION, U. S. INCOME TAX BEFORE CREDITS, FOREIGN TAXABLE INCOME, FOREIGN TAXES, AND FOREIGN TAX CREDIT CLAIMED, BY SIZE OF TOTAL ASSETS, 1954-1956 AND 1959-1962

n.a. - Not available.
[1]Revised.
[2]Includes returns with zero assets.
[3]Sampling variability of this estimate is too large to warrant showing separately. However, data are included in totals.
NOTE: See text for explanatory statements and for discussion of limitations of the data. The information for each of the years prior to 1961 appears in the Statistics of Income--Corporation Income Tax Returns report for that year. The 1961 data are from Statistics of Income--1961, Supplemental Report on Foreign Tax Credit Claimed on Corporation Income Tax Returns.
Detail may not add to total due to rounding.

Explanation of Terms

The following explanations include definitions and limitations of data items and of classifications used, as well as descriptions of adjustments made in preparing the statistics shown in this report. These explanations are designed as an aid in interpreting the statistical content of this report and should not be construed as interpretations of the Internal Revenue Code or related regulations, procedures, or policies. Code sections cited are those in effect for 1962.

Accumulated profits

Accumulated profits were the after-foreign-tax gains and profits of related foreign corporations, reported in schedule B, Form 1118, or of their subsidiaries, reported in schedule C, Form 1118 [Code section 902(c)]. Since the accumulated profits and not the total gains, profits, and income were subject to the United States tax when remitted to the domestic corporation as dividends, only a proportionate fraction of foreign taxes paid by related foreign corporations were eligible for the domestic parent corporation's foreign tax credit. This is reflected in the computation of the credit, illustrated in the explanation for Taxes deemed paid. (See also discussion of Net profit before taxes below.)

Active corporations

Active domestic corporation returns were those showing any items of income or deduction. They comprised the vast majority of the returns filed and were the basis for all the financial statistics presented in this report for domestic corporations. However, a few inactive domestic corporation returns did include one or more Forms 2952. Both the number of inactive domestic corporation returns filing Form 2952 for controlled foreign corporations and the number of and financial data on these Forms 2952 are included in the controlled foreign corporation tables.

The definition of an active controlled foreign corporation or subsidiary is similar to that of an active domestic corporation.

Business receipts (domestic corporations)

Business receipts were, in general, the gross operating receipts of the corporation less the cost of returned goods and allowances.

Business receipts included rents reported as a principal business income by real estate operators and by certain types of manufacturing, public utility, and service corporations. The latter corporations included manufacturers that frequently rented products rather than sold them, such as tabulating or electronic equipment; lessors of public utility facilities such as docks, warehouses, and pipelines; and companies engaged in rental services, such as for the rental of automobiles or clothing.

In the finance division, business receipts included such banking items as fees, commissions, trust department earnings, exchange collections or service charges when identified in schedules attached to the return. However, interest, the principal operating income of banking and savings institutions, is not included in the figures for business receipts. Premium income of life and certain other insurance companies was also included. (However, mutual insurance companies other than life or marine, and other than fire insurance companies issuing perpetual policies reported only investment income for tax purposes so that the premiums for these companies were not included.) When identified in schedules, operating income from investments (other than rent or cooperative apartment assessment reported by real estate operators) was allocated to one of the specific types of investment income for which statistics are shown separately in the corporation income tax returns tables.

Some corporations treated excise and related taxes which were included in the sales price of their products as part of their gross receipts from sales; others reported their receipts after adjustment for these taxes. When treated as receipts, excise and related taxes were deducted on the tax return as part of the cost of goods sold or were included in the separately itemized deduction for taxes paid. In any case, the receipts as reported by the taxpayer were included in the statistics.

Business receipts reported by security and commodity brokers, dealers, and exchanges, and by real estate subdividers, developers, and operators, required special statistical treatment. For these returns, net profit or loss from sales of securities or real estate was allocated to the statistics for net gain or loss from sales of property other than capital assets if cost of sales and operations exceeded 50 percent of receipts, or if such receipts were specifically identified as sales of securities or real estate. Otherwise, business receipts for these companies were used as reported.

Carryover

Carryover is the amount of prior years' creditable foreign taxes in excess of the limitation ("excess tax") which was carried over and included in the amount of current-year creditable foreign taxes. Excess tax may be carried back 2 years and forward 5 years. It is applied against any "excess limitation," which is the amount by which the limitation exceeds creditable taxes in a given year. Excess tax is first applied against excess limita-

tion of the second preceding year, then of the first preceding year, and is then carried over to the first, second, and succeeding years through the fifth year--until fully credited or until no excess limitation is available. There is no information provided in the statistics on carrybacks because the excess tax carried back is reported only on amended returns which were not included in this study. Neither the carryover nor carryback of excess tax distinguishes between taxes directly paid and taxes deemed paid. Rather, both of these were combined and reported as one figure on Form 1118.

Taxpayers may not credit excess taxes for a year in which one method of limitation (per-country or overall) is used against excess limitation accrued in a year for which the other method is used. Inasmuch as taxpayers with accounting periods beginning after December 31, 1960 were the first able to elect to use the overall method of limitation, for this method the data in this report can include only one year of carryover of foreign taxes. For the per-country method, of course, as many as five years of foreign taxes in excess of the limitation may be included as carryover.

For purposes of determining the foreign tax credit, taxpayers using the overall limitation are not required to report the amount of carryover by country. Consequently, only the total amount of carryover can be shown for corporations using the overall limitation. Also, a taxpayer cannot carry back or carry over creditable foreign taxes in excess of the limitation to a year in which creditable foreign taxes are being taken as a deduction.

Consolidated returns

Consolidated returns were income tax returns which contained the combined financial data of two or more corporations meeting the following requirements: (1) a common parent corporation owned at least 80 percent of the voting power of all classes of stock and at least 80 percent of each class of nonvoting stock (except stock which was limited and preferred as to dividends) of at least one member of the group, and (2) these same proportions of stock of each other member of the group were owned within the group.

The filing of a consolidated return constituted an election of group reporting, which, with certain exceptions, had to be followed in subsequent years. However, with the enactment of the Revenue Act of 1962, affiliated corporations filing consolidated returns were allowed to decide again whether or not they wished to continue filing on a consolidated basis for either the first taxable year for which returns were due to be filed after October 16, 1962, or the first taxable year ending after October 16, 1962. Because of the new election privilege, statistics for some companies may have moved into different industry and size classifications for 1962. No measure of the effect on comparability resulting from these changes is available. By law, the consolidated filing privilege could be granted to all affiliated domestic corporations connected through stock ownership with a common parent corporation except: (1) regulated investment companies, (2) real estate investment trusts, (3) corporations deriving a large percentage of their gross income from sources within a United States possession, (4) insurance companies not affiliated with other insurance companies of the same type and therefore not taxed under the same provisions of the law, (5) corporations designated as tax-exempt under Code section 501, and (6) China Trade Act corporations.

A consolidated return, filed by the common parent company, was treated as a unit, each classification being determined on the basis of the combined data of the affiliated group. Filing changes to or from a consolidated return basis affected year-to-year comparability of the statistics.

An additional tax of 2 percent was imposed on consolidated taxable income which was computed before deduction of partially tax-exempt interest and which excluded any taxable income attributable to regulated public utility or Western Hemisphere trade corporation members of the affiliated group.

Controlled foreign corporations

Controlled foreign corporations were those in which a domestic corporation owned more than 50 percent of the voting stock at any time during the domestic corporation's taxable year. For such foreign corporations, the domestic parent corporation was required to file Form 2952, "Information Return by a Domestic Corporation with Respect to Controlled Foreign Corporations." In addition, the domestic corporation had to file Form 2952 for foreign subsidiaries of its controlled foreign corporations. These subsidiaries were defined as foreign corporations in which the controlled foreign corporation owned more than 50 percent of the voting stock at any time during the latter's annual accounting period. As part of the filing requirements for Form 2952, a profit and loss statement, a balance sheet, and an analysis of surplus accounts were to be furnished for each foreign corporation. A facsimile of Form 2952 is provided at the end of this report.

Form 2952 was to be filed for foreign subsidiaries with accounting periods ending with or within the accounting period of the controlling foreign corporation, and for the controlling corporation when its accounting period ended with or within the taxable year of the controlling domestic parent corporation. However, Form 2952 was required to be filed only for foreign corporations with accounting periods beginning after December 31, 1960. The undercoverage resulting from not including foreign corporations with accounting periods beginning before December 31, 1960 is discussed under Limitations of the data in the Controlled Foreign Corporations section.

Creditable foreign taxes

Foreign taxes eligible for inclusion in the computation of the foreign tax credit against the United States income tax liability of the domestic corporation must be either: (1) a tax on income, war profits, or excess profits, or (2) a tax in lieu of an income tax. A foreign tax must have "income" as its base, essentially as defined under the United States tax law, or must be predominantly an income tax, although in both cases the foreign law under which the tax was imposed need not be identical to the United States law in respect to determination of gross income, exemptions, and deductions. In order to qualify as a creditable "in lieu" tax, a foreign tax must be a substitute for a foreign income tax, i.e., the "in lieu"

tax must replace in whole or in part an income tax which would have been imposed on the taxpayer if not for the "in lieu" tax.

Creditable taxes include both the foreign taxes considered as directly paid or accrued by the domestic corporation on profits of branch operations, withholding taxes on dividends and royalties, etc., and those taxes paid or accrued by a related foreign corporation or its subsidiary which are deemed paid by the domestic corporation. Creditable taxes may also include a carryover of taxes paid or accrued and taxes deemed paid in prior years. Taxes are creditable if they are paid to foreign countries or their political subdivisions and to possessions of the United States. Taxes generally not creditable include the following: excise, franchise, sales, turnover, production, and property taxes. Interest on penalties paid in connection with foreign taxes are also not creditable. However, virtually all foreign taxes not creditable do qualify as a deduction from gross income. No data are included in this report on noncreditable foreign taxes.

Taxpayers may take creditable taxes as well as noncreditable taxes as a deduction. However, since a domestic corporation usually obtains a greater tax benefit by electing to take foreign taxes as a credit against its United States income tax rather than as a deduction from gross income, it is believed that only a negligible amount of creditable foreign taxes were not used in the computation of the foreign tax credit and therefore not included in the data in this report.

Credit-limitation method

The limitation established a ceiling on the amount of foreign creditable taxes constituting the foreign tax credit. Taxpayers are permitted to choose from two alternative limitations: (1) the per-country limitation and (2) overall limitation.

Under the per-country method, the tax credit is computed separately for each foreign country or United States possession. The credit for foreign taxes paid to each country is limited to that percentage of income taxes owed to the United States which taxable income from the country or possession bears to total taxable income. The computation is as follows:

$$\text{U.S. income tax before credits} \times \frac{\text{Taxable income from sources within the foreign country or United States possession}}{\text{Taxable income from all sources, foreign and domestic}}$$

Under the overall method, the amount of credit is computed on the total amount of creditable foreign taxes paid to all foreign countries and United States possessions. As a result, the foreign tax credit computed under this method is not available by country. The credit may not exceed the percentage of United States income tax which taxable income from all foreign sources bears to total taxable income. The overall limitation method, available to taxpayers for taxable years beginning after December 31, 1960, is computed in the following manner:

$$\text{U.S. income tax before credits} \times \frac{\text{Taxable income from all foreign sources and United States possessions}}{\text{Taxable income from all sources, foreign and domestic}}$$

No matter which limitation method is elected, the total foreign tax credit claimed cannot exceed the amount of U. S. income tax before credits.

Dividends paid by controlled foreign corporations

Dividends were paid by the controlled foreign corporations and their subsidiaries not only to the controlling domestic corporation but also to other domestic corporations. However, only dividends paid to controlling domestic corporations (item 12(1) of Form 2952) were included in the controlled foreign corporation tables. While a small amount of dividends was paid by subsidiaries of controlled foreign corporations to domestic parent corporations, most of the subsidiary's dividends were normally paid to the foreign corporation controlling it. Dividends paid by controlled foreign corporations occasionally included a return of capital, such as a liquidating distribution, but such a return of capital would not have been included as foreign dividend income in the domestic corporation's income tax return. The payment of dividends by the subsidiary to the controlled foreign corporation resulted in profits of subsidiaries being partially double counted, i.e., profits of subsidiaries were before payment of dividends, but profits of controlled foreign corporations included the dividends received from subsidiaries.

Dividends paid by related foreign corporations

The dividends paid by a related foreign corporation, i.e., a foreign corporation in which a domestic corporation owns 10 percent or more of the voting stock, are considered as distributed out of the foreign corporation's accumulated profits. The domestic corporation, upon receipt of these dividends, includes them in its taxable income, and the dividends thereby become subject to United States tax. All foreign corporations directly controlled by a domestic corporation owning over 50 percent of the voting stock (controlled foreign corporation) are, of course, included in the definition of a related foreign corporation.

A proportionate share of the foreign taxes paid by related foreign corporations which are attributable to the foreign corporation's accumulated profits out of which the dividends are paid are deemed paid by the domestic corporation and may be credited against the domestic corporation's United States tax liability. In order to determine the foreign taxes for which the tax credit may be taken, the dividends must be traced to the accumulated profits of the particular year from which they were paid (see schedule B, Form 1118). Dividends are treated as having been paid from the most recently accumulated profits. Dividends paid in the first 60 days of any year are deemed to be from profits earned in the immediately preceding year. The country for which the tax was calculated as having been deemed paid was not always the country to which the tax was actually paid. In schedule B, the dividends paid and the taxes deemed paid are attributable entirely to the country where the related foreign corporation was incorporated.

Some income was treated as dividends only for the purpose of determining the taxes creditable as deemed paid. Receipts in lieu of dividends were in the form of royalties paid out of the accumulated earnings and profits of wholly owned foreign subsidiaries. These payments were in-

cluded in schedule B, Form 1118, as dividends paid from the profits of related foreign corporations. To qualify for this particular treatment, the following requirements of Code section 902(d) had to be met:

(1) Domestic parents had to own 100 percent of all classes of outstanding stock of the foreign corporation from which they received royalties.

(2) The foreign corporation was engaged in manufacturing, production, or mining.

(3) The contractual arrangement between the domestic corporation and its foreign subsidiary stipulated that the royalty payments to the domestic parent would be accepted in lieu of dividends. The contractual arrangement further provided that the subsidiary would not declare or pay dividends in any calendar year in which this contract was in effect.

Another example of income considered as dividends only for determining the taxes creditable as deemed paid were royalties from sources within the United Kingdom. Under certain conditions, these royalties were included in schedule B but were not otherwise identified as dividend income on the return. Recipients of these royalties were deemed to have paid income taxes which were deducted from the royalty by the payer (as required by United Kingdom law), provided the recipient elected to include the amount of the withheld tax in his gross income subject to United States tax. In effect, (1) the net amount of royalties received was "grossed-up" with the United Kingdom tax when determining the taxpayer's income subject to United States tax, and (2) the full amount of taxes withheld with respect to the royalty was eligible for the foreign tax credit.

When dividends were made in kind, i.e., as distributions of property, the amount was treated as a distribution at the fair market value of the property received or the adjusted basis of the property in the hands of the distributing corporation whichever was the lower (Code section 301). The amount used for the dividend subject to United States tax was also used in computing the indirect credit for foreign taxes deemed to have been paid.

Domestic corporations receiving dividends from foreign corporations (other than a foreign personal holding company) engaged in trade or business in the United States for an uninterrupted period of not less than 36 months prior to the payment of dividends, and deriving 50 percent or more of their gross income from within the United States, were allowed under Code section 245 an 85 percent deduction against the amount of dividends received. However, the deduction could be taken only up to an amount bearing the same ratio to the dividends as the foreign corporation's gross income earned within the United States bears to its gross income from all sources. The amount of dividends in excess of the deduction was considered as from sources without the United States under Code section 861(a)(2), even though the income could be from sources within the United States. If these dividends were received from a related foreign corporation, the domestic corporation could claim credit for taxes deemed to have been paid.

Foreign dividends

Three measures of foreign dividends are provided in this report. The first relates to total foreign dividends reported in schedule C, Form 1120, and includes all dividends designated by the taxpayer as being foreign. The second is obtained from schedule B, Form 1118, and includes only dividends from related foreign corporations. The third measure is item 12(1) of Form 2952, and includes only the dividends paid by a controlled foreign corporation or its subsidiaries to the United States parent corporation. Normally the first measure of all dividends exceeds the second measure for related foreign corporations, and the second measure exceeds the third measure for controlled foreign corporations. However, some variations from this normal relationship do occur:

(1) Dividends from foreign sources in schedule C, Form 1120, were not always clearly designated as foreign, and as a result a small amount of foreign dividends may have been mistakenly classified as dividends from domestic corporations.

(2) Dividends paid by related foreign corporations shown in schedule B, Form 1118, may include royalties (as discussed above in the explanation for Dividends paid by related foreign corporations) and exclude dividends paid to domestic corporations which did not claim a foreign tax credit. Therefore, data on dividends from related foreign corporations, which are obtained from the Form 1118, include some amounts which are not included in dividends from all foreign corporations and at the same time exclude some dividends actually paid by related foreign corporations.

(3) Form 2952 may include as a dividend paid what is actually a return of capital, such as a liquidating distribution, which was not reflected in schedule C, Form 1120, for the domestic parent corporation.

(4) Dividends paid by a controlled foreign corporation may include dividends that were paid to domestic corporations not claiming the foreign tax credit, or to domestic corporations claiming the foreign tax credit but not filing a Form 1118 in support of foreign tax credit claimed. Therefore data on dividends from related corporations would not include some amounts that were paid by controlled foreign corporations.

Foreign tax credit claimed

Foreign tax credit claimed, based on Code sections 901-905, is the reduction from the gross amount of income tax liability allowed domestic corporations for income, war profits, and excess profits, taxes paid or accrued, and under certain conditions, deemed to have been paid, to foreign countries or United States possessions. In some instances, the foreign tax credit statistics shown in this supplemental report differ slightly from the corresponding data appearing in *Statistics of Income--1962, Corporation Income Tax Returns* because of the methods used to process the data.

The foreign tax credit allowable was limited to the proportion of the domestic tax which the taxable income from foreign sources bore to the total taxable income (see Credit limitation method), and the amount thus determined could not exceed the United States income tax before credits. A taxpayer who claimed a foreign tax credit could not in the same year take a business deduction from gross income for creditable foreign taxes. Also, a business deduction could not be taken for a carryover or carryback of taxes arising from a year in which the foreign tax credit was taken.

Foreign taxes

Foreign taxes shown in the foreign tax credit tables consist of (1) taxes paid or accrued, (2) taxes deemed paid, and (3) carryover of excess taxes from previous years. See discussion of these terms and also Creditable foreign taxes elsewhere in this section. Taxes shown in the controlled foreign corporation tables are discussed under Taxes paid or accrued.

Form 1118

The schedules underlying the computation of the foreign tax credit are included in Form 1118, "Statement in Support of Credit Claimed by Domestic Corporation for Taxes Paid or Accrued to Foreign Countries or Possessions of the United States." A facsimile of this form is provided at the end of this report. Taxpayers sometimes provided their own equivalent statements in lieu of the prescribed form. The statistics from these statements are included in the data on Returns with Form 1118 filed in support of foreign tax credit claimed.

Form 2952

Form 2952, "Information Return by a Domestic Corporation with Respect to Controlled Foreign Corporations" was filed by domestic corporations for each foreign corporation directly or indirectly controlled. (See discussion of Controlled foreign corporations in this section.) A facsimile of this form is provided at the end of this report.

Forms of operation

Tax law provisions, including those pertaining to the foreign tax credit, help to determine the most advantageous form of organization under which domestic corporations conduct foreign operations. A few of the more important factors involved in such a determination are discussed below.

Factors favoring foreign branch operations:

(1) The domestic corporation can include the current *losses* as well as the income of its branches in computing United States taxable income. However, the Code does not allow a domestic parent corporation to include its foreign subsidiary corporations in a consolidated return (except for certain wholly owned subsidiaries in Mexico and Canada). Thus the domestic corporation could not deduct for income tax purposes the losses incurred by the subsidiary until it disposed of its investment at a loss or received liquidating dividends from the foreign corporation.

(2) In computing taxable income from a foreign *branch*, domestic corporations in the extractive industries can, under the Code, deduct a percentage or cost depletion allowance (whichever is higher) on each mineral property. However, percentage depletion cannot be used to compute earnings and profits, and the dividends from foreign subsidiaries are considered as paid out of earnings and profits.

Factors conducive to operations through ownership of stock in foreign corporations:

(1) Profits of foreign corporations were not subject to United States income taxes until these profits were remitted as dividends to the domestic corporation. Inasmuch as dividends that become subject to United States income taxes are paid from after-tax profits of the foreign corporation, the profits paid as income taxes to foreign jurisdictions are not subject to United States corporation income taxes. In contrast, the entire foreign branch profits of a United States corporation are subject to United States income taxes. However, this advantage of foreign subsidiary operation is partly offset by foreign withholding taxes on dividends paid. Furthermore, instead of being repatriated, these profits could be reinvested abroad, and the earnings from reinvestment similarly need not be subject to United States income tax. The tax advantage of operating through foreign subsidiaries in countries with lower income tax rates than those in the United States may have resulted in less need for the domestic parent corporation to provide loans or additional equity capital to finance its foreign subsidiary corporations in these countries with lower income tax rates.

(2) Accumulated profits of foreign corporations not engaged in business in the United States are not subject to the penalty tax on the unreasonable accumulation of earnings under Code section 531.

(3) Since the domestic corporation could determine the timing of the receipt of dividends from its controlled foreign corporation, it could thereby determine when a foreign tax credit for taxes deemed paid by it would be taken for the taxes on the foreign corporation's profits from which the dividends were paid (See Taxes deemed paid).

Other factors that helped determine the most advantageous form of operating abroad were:

(1) special provisions of the Code, such as sections 921 and 922 for Western Hemisphere trade corporations, section 931 for income derived from United States possessions, and section 941 for China Trade Act corporations;

(2) the possibility of joint ventures with foreign corporations, as such ventures were sometimes used as a favorable means of penetrating foreign markets;

(3) the tax laws of some countries, which imposed higher taxes on a branch of a United States corporation than on a subsidiary of a United States corporation actually incorporated under the laws of the foreign country; and

(4) the Edge Act which permits United States banks to form domestic subsidiary corporations that can engage in a range of international banking activities, including buying shares in foreign banks.

Geographic classification: area or country

In the foreign tax credit tables, classification of the data by area and country was based on Form 1118, on which taxpayers identified the countries to which taxable income was attributed and to which foreign taxes were paid. Taxable income consisted primarily of branch profits and dividends, but also included rents, royalties, interest, income from sale of real property, and compensation for labor or personal services. These various components of taxable income were attributed to specific foreign countries in accordance with the "source of income" rules in Code sections 861 through 864 which are summarized below. Although there were tax treaties with various countries, the source rules in most treaties were generally similar to those found in the Code.

Component of taxable income	Origin of income	Attribution of income rule
Branch profits	(a) Purchase and resale of personal property	Country in which property was sold
	(b) Production and sale of personal property except natural deposits	Part to country of production and part to country in which property was sold
	(c) Extraction and sale of natural deposits	Generally to the country in which extraction took place
Dividend income:		
(a) From related foreign corporations	(a) Ownership of 10 percent or more of the stock of a foreign corporation	(a) Country in which the related foreign corporation was incorporated
(b) From other foreign corporations	(b) Portfolio investment in other foreign corporations	(b) Country where taxes were paid
Rental income	Rental of real and personal property	Country of location of real and personal property
Royalty income	Patents, copyrights, or licenses	Country where patents, copyrights, or privileges were used
Interest	Interest-bearing obligations	Country of residence of the payer
Income from sale of real property	Sale of real property	Country of location of real property
Compensation for labor or personal services	Personal services	Country where services were performed

It should be noted that all dividend income which the domestic corporation received from a related foreign corporation, and the foreign taxes paid and deemed paid on this income, were attributed to the country in which the related foreign corporation was incorporated, although the foreign corporation may have conducted business in other countries as well. For further discussion of this, see Country classification under Limitations of the data in the Foreign Tax Credit section of this report.

Taxpayers using the overall limitation did not report the carryover amounts included in creditable foreign taxes country by country, nor did they determine the foreign tax credit on a country by country basis. Therefore, information for these two items is not available by country or area for taxpayers using the overall limitation.

In comparing the geographic area categories in the foreign tax credit tables in this report with those for 1961, the following should be noted: Jamaica and Trinidad, which are part of Latin America in 1962, were included in Other Western Hemisphere in 1961. In that year, data on Jamaica were presented separately, and Trinidad was included in Other British West Indies. As the 1962 figures for Other British West Indies (which exclude Trinidad) are negligible, it can be assumed that for 1961, Trinidad accounted for virtually all of the foreign taxable income and taxes shown for Other British West Indies. Consequently, when comparing the 1961 and 1962 data, the amounts shown for Jamaica and Other British West Indies in the 1961 tables should be subtracted from Other Western Hemisphere and added to Latin America.

In the controlled foreign corporation tables, classification of the data by area and country was based on information provided on Form 2952, one of which was filed for each controlled foreign corporation and for each foreign subsidiary of a controlled foreign corporation. Data were classified both by the country under whose laws the foreign corporation was incorporated and by its principal place of business. The principal place of business was frequently outside the country of incorporation for firms incorporated in countries with low or no income taxes as well as in countries with relatively lower or no taxes on income from sources outside the country of incorporation. Controlled foreign corporations incorporated in such countries often also had subsidiaries incorporated in a different country. Table 28 presents data for controlled foreign corporations with principal place of business outside country of incorporation.

The negligible amounts of foreign income and taxes shown under "Country not stated and other income from outside the United States" in the foreign tax credit tables included (1) income and taxes reported on Form 1118 under "other" countries, and (2) foreign income earned on the high seas and therefore not related to specific countries. Likewise, the category "Country not stated" in the controlled foreign corporation tables included foreign corporations for which the country of incorporation was not provided.

Gross receipts (controlled foreign corporations)

Gross receipts were reported on Form 2952 for each controlled foreign corporation or subsidiary of a controlled foreign corporation. The amount reported for gross receipts generally corresponded to the amount included on the profit and loss statement of the foreign corporation for gross operating receipts less the cost of returned goods and allowances. In some cases, gross receipts also included earnings from interest, dividends, licensing fees, rents, and royalties.

Inactive corporations

Inactive domestic corporation returns were defined as those showing no item of income or deduction. Returns were filed by inactive domestic corporations in accordance with the regulation that a domestic corporation in existence during any portion of a taxable year must file a return. A few inactive domestic corporation returns did include one or more Forms 2952. Both the number of inactive domestic corporation returns filing Form 2952 for controlled foreign corporations and the number of and financial data on these Forms 2952 are included in the controlled foreign corporation tables.

The definition of an inactive controlled foreign corporation or subsidiary is similar to that of an inactive domestic corporation. Table 30 shows the number of these inactive foreign corporations.

Income subject to United States tax

For most corporations, income subject to United States tax consisted of net income less certain additional deductions described below as statutory special deductions. There were exceptions to this general rule since income subject to United States tax for some corporations was not derived from the amounts shown as net income. These corporations included life and certain mutual insurance companies, regulated investment companies, and real estate investment trusts.

Statutory special deductions included the deductions claimed for (1) net operating losses of prior years, (2) intercorporate dividends received, (3) dividends paid on

certain preferred stock of public utilities, and (4) Western Hemisphere trade corporations. These deductions were allowed in addition to the ordinary and necessary business deductions and are therefore treated as deductions from net income.

The Western Hemisphere trade corporation deduction is the only statutory special deduction shown in this report. It is allowed to certain domestic companies who conduct their business outside the United States but within the Western Hemisphere and who qualify under section 921 of the Code.

Income year

The income year is the annual period for which statistics are presented and covers accounting periods ended during July of one year through June of the next. The statistics for 1962 are based on returns of domestic corporations with accounting periods coinciding with calendar year 1962 and returns with accounting periods ended during July 1962 through June 1963. About one-half of all corporation returns for 1962 had accounting periods ending in December, and over 90 percent of the foreign tax credit claimed was reported on these calendar-year returns. Classification of the data by income year are provided in the historical summaries (tables 10, 11, 34, and 35). The accounting periods of controlled foreign corporations and their subsidiaries are discussed above under Controlled foreign corporations.

Industrial classification

Tax return data were classified by industrial groups and divisions according to the *principal* business activity of the corporation. The industrial classification structure used for *Statistics of Income* reports conforms closely to the 1957 Standard Industrial Classification. As in past years, the Standard Industrial Classification, which was developed to classify separate establishments, has been applied to a legal entity or ownership basis for *Statistics of Income* by combining appropriate groups. Although definitions conform closely to the Standard Industrial Classification, particular provisions of the Internal Revenue Code have also been considered.

Returns were classified in that industry which accounted for the largest portion of business receipts even though the return may have been for a company engaged in many business activities or may have been a consolidated return filed for members of an affiliated group of corporations undertaking different business activities.

Year-to-year changes in the classification of specific corporations could have resulted from mergers and other changes in organization or from the privilege of filing consolidated returns as well as from a change in the principal source of business receipts.

In the controlled foreign corporation tables, the data are classified by the industrial activity of both the domestic parent corporation and the controlled foreign corporation or its subsidiary. Table 18, which cross-classifies the data, shows that for nearly every industry, domestic corporations classified in a particular industry directly or indirectly controlled foreign corporations classified in different industries. However, for tables in other sections of this report, only the industry of the domestic corporation was available.

Investment credit

The investment credit allowed corporations to reduce their income tax for investment in certain depreciable property acquired after December 31, 1961. The credit was allowed for the first year that the property was placed in service. Unless otherwise indicated, data on income tax for domestic corporations in this report are before both the foreign tax credit and the investment credit. For most corporations, the investment credit was equal to 7 percent of qualified investment. However, for public utility property, the credit was 3 percent of qualified investment. Income tax liability against which the credit was applied was first reduced by foreign tax credit. If the amount of tax remaining was more than $25,000, the investment credit could not exceed $25,000 plus 25 percent of the tax over $25,000. Other limitations applied to affiliated corporations, cooperatives, certain banking and savings institutions, and investment companies, as well as to investment in public utility property.

New or used property purchased and eligible for the credit was defined as (1) tangible personal property, and (2) real property (except buildings and their structural components), if the real property was used as an integral part of manufacturing or production, or was used in furnishing transportation, communications, electrical energy, gas, water, or sewage disposal services, or constituted a research or storage facility used in connection with any of these activities. However, property with a useful life of less than four years was not eligible for the investment credit, and the cost of used property taken into account could not exceed $50,000. Also ineligible for investment credit were (1) property predominantly used for lodging, (2) property used by certain tax-exempt corporations, (3) property leased to or owned by government units, (4) property consisting of livestock, and (5) certain property predominantly used outside the United States (physically located outside of the fifty states or the District of Columbia).

However, many transportation properties were eligible for the investment credit even though these properties were predominantly used outside of the United States. These included, with certain limitations, such properties as airplanes, railway rolling stock, vessels documented under United States laws, motor vehicles, and containers. Generally, to be eligible these properties had to be involved in transportation activities to or from the United States.

Any part of the investment credit which could not be applied as a credit against the current-year tax because of the limitations, could be carried back to the three preceding tax years (but not to years ending before January 1, 1962), and the balance which was still unused then could be carried forward to the five succeeding tax years. The amount carried back or carried over to any taxable year could not exceed the applicable limitation based on the tax liability for that year.

Net income (or net deficit)

The net income (or net deficit) shown in this report for domestic corporations is the difference between gross taxable receipts and the ordinary and necessary business deductions allowed by the Code. Net income is generally larger than income subject to tax because of the statutory

special deductions from net income allowed most corporations in computing taxable income. (See discussion of statutory special deductions under Income subject to United States tax.)

Net profit before taxes (or net loss)

Net profit before taxes (or net loss) is shown in this report for controlled foreign corporations and their subsidiaries. The net profit (or loss) before taxes and the taxes were separately reported on Form 2952. Net profit is defined as profit remaining from revenue after deduction of related costs. Net loss of course is the reverse of net profit and therefore occurs when the related costs exceed revenue.

Permanent establishment

An important purpose of tax conventions is to clarify on a bilateral basis that a United States enterprise will not be taxed on its industrial or commercial profits in a foreign country if the enterprise does not have a permanent establishment in the foreign country. The bilateral aspect provides the same benefits to the foreign country.

In 1962, the United States had income tax conventions in effect with the following countries: Australia, Austria, Belgium, Canada, Cyprus, Congo (Leopoldville), Denmark, Finland, France, West Germany, Greece, Honduras, Ireland, Italy, Jamaica, Japan, Netherlands (and Netherlands Antilles), Nigeria, New Zealand, Norway, Pakistan, Rwanda, Sierra Leone, Sweden, Switzerland, Trinidad and Tobago, Union of South Africa, and the United Kingdom. Although these different conventions cover many aspects of income taxes, such as the foreign tax credit, exemptions, rate reductions, deductions, source rules, allocation of profits among related enterprises, and other aspects, only the provisions dealing with permanent establishments are covered in the following discussion.

Even though the tax conventions with the different countries listed above do not have a uniform definition of a permanent establishment, an understanding of this term can be acquired from the following extract from the United States treaty with the Netherlands [Article II(1)(i)].

"The term 'permanent establishment' when used with respect to an enterprise of one of the Contracting States, means a branch, factory, or other fixed place of business, but does not include an agency unless the agent has, and habitually exercises, a general authority to negotiate and conclude contracts on behalf of such enterprise or has a stock of merchandise from which he regularly fills orders on behalf of such enterprise. An enterprise of one of the Contracting States shall not be deemed to have a permanent establishment in the other Contracting State merely because it carries on business dealings in such other Contracting State through a bona fide commission agent, broker or custodian acting in the ordinary course of his business as such. The fact that an enterprise of one of the Contracting States maintains in the other Contracting State a fixed place of business exclusively for the purchase of goods or merchandise shall not of itself constitute such fixed place of business a permanent establishment of such enterprise. When a corporation of one Contracting State has a subsidiary corporation which is a corporation of the other Contracting State or which is engaged in trade or business in such other Contracting State, such subsidiary corporation shall not, merely because of that fact be deemed to be a permanent establishment of its parent corporation."

Related foreign corporations

Related foreign corporations are foreign corporations in which the domestic parent corporation owns at least 10 percent of the voting stock. Those related foreign corporations in which the domestic parent or an affiliated corporation owns more than 50 percent of the voting stock are known as controlled foreign corporations. The Code contains provisions permitting domestic corporations to take a tax credit for income taxes paid by related foreign corporations and their subsidiaries. These provisions are described elsewhere in this section under Creditable foreign taxes, Taxes deemed paid, and Taxes paid or accrued.

Returns with foreign tax credit

Returns with foreign tax credit are the returns of domestic corporations which showed a tax credit for taxes paid or accrued and taxes deemed paid to foreign countries and United States possessions, including their political subdivisions. Although summary statistics are furnished in this report for all corporation returns which claimed the credit, detailed information on foreign income and taxes is available only for returns for which supporting statements (Form 1118) were filed.

Taxable income (or loss) from foreign sources

Taxable income from foreign sources may be broadly defined as the gains, profits, and income from sources without the United States, less allocable deductions. Included in this broad definition are taxable income derived from dividends, the sale of personal or real property, rentals, interest, royalties, and compensation for labor or services performed. Code sections 861-864 provide source rules for determining whether or not the income is from a foreign source.

Domestic corporations received taxable foreign income primarily from two sources: (1) from the operation of a branch in a foreign country, or (2) from a foreign corporation in which the domestic corporation owns stock. The profits of such a foreign corporation did not constitute taxable income to the United States corporation until dividends were received from the foreign corporation. Code section 862 provides for determining "taxable income from sources without the United States" by deducting from gross foreign source income the "expenses, losses, and other deductions properly apportioned or allocated thereto." Where for a country or countries these expenses of the domestic corporation exceeded its gross income from that country, a loss occured. See Geographic classification: area or country above for a discussion of the source of income rules in Code sections 861-864 which serve as the basis for attributing foreign source income to specific countries.

Taxes deemed paid

The Code provides that a domestic corporation shall be deemed to have paid a proportionate share of the creditable foreign taxes paid or accrued or deemed paid by a related foreign corporation--i.e., a foreign corporation in which a domestic corporation owns 10 percent or more of the voting stock. A related foreign corporation shall be deemed to have paid a proportionate share of the creditable foreign taxes paid by a subsidiary in which the related foreign corporation owns 50 percent or more of the voting stock. The domestic corporation may claim a credit for the foreign creditable taxes of a related foreign corporation and its subsidiaries as if the domestic corporation itself had paid foreign taxes. However, the credit for taxes deemed paid does not become available until foreign dividends are paid out of the accumulated profits of the related foreign corporation to the domestic corporation and therefore become subject to the United States tax.

To obtain the amount of taxes deemed paid, the dividends must be attributed to a particular year's accumulated profits. In general, dividends paid in the first 60 days of the year are deemed paid from the accumulated profits of the preceding year. In all other cases, dividends are deemed paid from the most recently accumulated profits to the extent possible. Any excess is deemed paid out of prior years' accumulated profits. For example, if a related foreign corporation were to have profits of $1,000 in 1962 against which $300 in taxes were paid, profits of $800 in 1961 against which $225 in taxes were paid, and profits of $700 in 1960 against which $200 in taxes were paid, accumulated profits for the three years would amount to $700, $575, and $500. If dividends of $1,200 are declared in 1962 after the 60-day period, they will first be attributed to the $700 accumulated profits for 1962; the remaining $500, to the accumulated profits for 1961. Accumulated profits of $75 for 1961 and $500 for 1960 would remain as amounts against which future dividends could be attributed. Since the dividends are paid out of the accumulated profits for 1962 and then 1961, the foreign taxes creditable are those paid for 1962 and 1961 by the related foreign corporation. Similar calculations are made based on the profits and taxes of its subsidiaries to determine the taxes deemed paid by a related foreign corporation.

The calculations may be broken down into the following steps indicated in schedules B and C, Form 1118 (schedule B pertains to a related foreign corporation; schedule C, to the related foreign corporation's subsidiary):

(a) To determine taxes deemed paid by the related foreign corporation:

(1) $\frac{\text{Accumulated profits}}{\text{Total gains, profits, and income}} \times \text{Foreign tax on total gains, profits, and income} = \text{Foreign tax paid on accumulated profits}$

(2) $\frac{\text{Dividends paid}}{\text{Accumulated profits}} \times \text{Foreign tax paid on accumulated profits} = \text{Tax deemed paid by the related foreign corporation}$

(b) To determine taxes deemed paid by the domestic corporation:

(1) Determine the related corporation's foreign tax paid on accumulated profits, computed similarly to (a)(1) above.

(2) $\frac{\text{Dividends paid}}{\text{Accumulated profits}} \times \text{Foreign tax paid on accumulated profits plus tax deemed paid by the related foreign corporation (From schedule C)} = \text{Tax deemed paid by the domestic corporation}$

Schedule B of Form 1118 provides that both the profits of a related foreign corporation and the taxes deemed paid on the dividends paid from these profits are to be attributed entirely to the related foreign corporation's country of incorporation. Consequently, taxes classified as deemed paid in a particular country may include some taxes paid to other countries.

Taxes paid or accrued

Taxes paid or accrued by the domestic corporation are income, profits, and excess profits taxes paid or accrued to a foreign country or United States possession (including political subdivisions). These taxes include (1) taxes withheld on dividends, interest, royalties, and similar remittances; (2) taxes paid or accrued on profits of foreign branches; and (3) eligible substitute taxes paid or accrued in lieu of the foreign country's regular income or profits tax. Certain production taxes imposed on mining firms in lieu of a regular income tax have qualified in some countries as eligible "in lieu of" taxes. Taxes paid or accrued by foreign corporations or their subsidiaries are principally foreign corporation income taxes and also may include any of the above taxes.

Under Code section 901, the computation of a domestic corporation's foreign tax credit may include taxes paid or accrued by the domestic corporation if these taxes meet certain requirements (see Creditable foreign taxes). Under Code section 902, taxes paid or accrued by a foreign corporation may be creditable as foreign taxes deemed paid by the domestic corporation, provided such taxes otherwise qualify as creditable taxes. The domestic corporation must receive a dividend from a related foreign corporation before taking the credit for taxes deemed paid (see Taxes deemed paid). Moreover, all of the taxes mentioned must actually have been paid, or normally have been accrued in a way that fixes the amount of the tax and the liability of the taxpayer to pay it, before they qualify as creditable. If later payment of the tax differs from the amount of the tax formerly accrued, the foreign tax credit should be adjusted accordingly.

The foreign income taxes shown in the controlled foreign corporation tables are generally those actually paid or accrued for the current year. However, in countries where income tax allocation is an accepted accounting principle, the taxes reported may not be those actually paid or for which there was an actual liability for the current year. Inasmuch as income tax allocation was a generally accepted accounting principle in the United States, and the instructions for Form 2952 stated that the attached financial statements "should be prepared in conformity with generally accepted accounting principles," the recasting of foreign profit and loss statements need not have resulted in showing the taxes actually paid or accrued for the current year.

The allocation of income taxes as an expense is a generally accepted accounting principle in the United Kingdom, Australia, and the Union of South Africa. In these countries, the amount of income tax expense shown in the profit and loss statement may differ from the actual income tax liability. The difference is one of timing and occurs when the net profit per financial books of account in any one year differs from income taxable by the foreign jurisdiction in that year. "Timing differences" are those that reverse in a later year or years. A common practice in income tax allocation is taking accelerated depreciation as a deduction in computing income taxable by the foreign jurisdiction, but using straight-line depreciation as an expense in computing income per financial books of account. Initially book income is larger than taxable income, and income tax taken as an expense is larger than the total income tax liability. The amount by which the income tax expense exceeds the income tax liability is carried as a deferred credit on the balance sheet. In later years the reverse occurs, and the deduction for accelerated depreciation will be less than the amount of straight-line depreciation. This reversal results in book income being less than taxable income, and income tax as an expense in the profit and loss statement will be less than the actual total income tax liability based on taxable income. The amount by which the actual income tax liability exceeds the income tax expense is used to reduce the formerly recorded deferred credit in the balance sheet. The difference between income tax as an expense and as a liability tends to cancel out for a large aggregation of corporations in any one year, but there may be notable differences for small aggregations of corporations.

When foreign corporations have business operations in a country different from the one in which incorporated, or have other income such as dividends coming from sources in other countries, taxes for such corporations often include those taxes imposed by other countries on the income coming from without the country of incorporation. Tables 28 and 29 give some indication of the countries and amounts involved for controlled foreign corporations with principal place of business outside country of incorporation.

Total assets

Total assets are those reported on the end-of-year balance sheet in the corporation's books of account. In this report, total assets are net after reduction for accumulated depreciation, amortization, depletion, and the reserve for bad debts. When these reserves are reported as liabilities, they are treated as reductions from the asset accounts to which they relate, and the total assets are adjusted accordingly.

Asset estimates for the small percentage of returns of corporations which failed to provide balance sheet information were based on schedules in the tax return other than the balance sheet, e.g., from the schedules for depreciation, bad debts, and cost of goods sold; from reference books; and from relationships between income statement and balance sheet items on similar returns which had both statements and which were classified in the same industrial group.

Total assets of controlled foreign corporations were reported on the balance sheet required to be filed with Form 2952. Data on total assets in the controlled foreign corporation tables reflect both generally accepted accounting principles of United States corporations and accounting principles used in foreign countries. Accounting principles of some countries differ from those in the United States regarding the recording, depreciation, revaluation, or write-up or write-off of assets. Most foreign accounting statements filed with Form 2952 were translated and recast to conform to the generally accepted accounting principles of the United States parent corporation. However, the controlled foreign corporation tables do include data from some foreign accounting statements that were not recast to conform to the generally accepted accounting principles of the United States parent corporation.

United States income tax before credits

United States income tax before credits is the gross amount of tax liability before deducting the foreign tax and investment credits. United States income tax consists of regular tax and alternative tax, although only the combined amount is presented in the tables of this report.

The regular tax was the income tax liability generally computed at the normal tax and surtax rates. The normal tax rate was 30 percent of taxable income as defined by the Code, and the surtax rate was 22 percent of taxable income (plus partially tax-exempt interest) in excess of $25,000. In the case of consolidated returns filed for an affiliated group of corporations, an additional tax of 2 percent was applicable under section 1503 of the Code. This additional 2-percent tax was not applicable to certain public utility income or Western Hemisphere trade corporation income.

The alternative tax was the income tax liability computed under section 1201 of the Code. It consisted of a 25-percent tax on net long-term capital gain reduced by net short-term capital loss and a normal tax and surtax on the balance of taxable income. The alternative tax was payable if it was less than the regular normal tax and surtax on the entire amount of taxable income.

Statistics shown for income tax are based on the amount reported by the corporation on its current-year return. These statistics do not reflect any adjustments to the tax liability resulting from the carryback of future year losses nor any adjustments resulting from audit and other enforcement activities.

Western Hemisphere trade corporation deduction

This deduction was allowed certain domestic corporations which qualified under section 921 of the Code. These companies conducted their business outside the United States but within the Western Hemisphere. In 1962, the special deduction was about 27 percent of net income after all other statutory special deductions. For further discussion, see Qualifications and benefits of Western Hemisphere trade corporations in that section of this report.

Zero assets

"Zero assets" was used as a category in classifying controlled foreign corporations or their subsidiaries by size of total assets. Included for both domestic and con-

trolled foreign corporations or subsidiaries were final returns of liquidating or dissolving corporations which had disposed of all assets. Also included were: (1) final returns of merging domestic corporations whose assets and liabilities were reported in the returns of the acquiring domestic corporation, and (2) returns of resident foreign corporations (incorporated abroad but conducting business in the United States) filing Form 1120-F other than foreign insurance company returns with balance sheet information for United States branches. Also included for controlled foreign corporations or subsidiaries were those Forms 2952 actually showing zero assets but providing no indication of liquidation or merger.

If there was some indication that controlled foreign corporations of subsidiaries had total assets but such assets were not reported on Form 2952, the foreign corporations were classified in the category of "Assets not available." However, since it was often not possible to clearly distinguish between zero assets and assets not available, in all of the controlled foreign corporation tables with the exception of table 16 these two categories have been combined into the category "Zero assets and assets not available." For the small percentage of domestic corporation returns where balance sheet information was not available, the assets were estimated as described above under Total assets.

7A Returns other than Forms 1120-S: Number filed and in sample, and prescribed and achieved sampling rates, by sample class, 236
Returns with foreign operations:
7B Number in sample and estimated number filed, 237
7C Minimum percentage of selected estimates attributable to returns not subject to sampling variability, 237

The data presented in this report are estimates derived from those returns of corporations with foreign operations which were included in the stratified sample of corporation income tax returns described below under Sources of the data. The two major groups of returns included in this report are returns with foreign tax credit, and returns with one or more controlled foreign corporations. The total number of returns in each group was a small fraction of all corporation returns filed. Furthermore, the proportion by sample class of the returns in the two major groups differed considerably from the proportion by sample class of the entire population of corporation returns. Returns sampled at a 100-percent rate accounted for virtually all of the estimated amounts and a substantial, though smaller, percentage of the estimated frequencies. Although there may be some data, particularly frequencies, which were subject to excessive sampling variability, such data were not identified, and therefore could not be deleted or combined with other estimates. This is discussed in detail below under Limitations of the Data: Sampling variability.

DESCRIPTION OF THE SAMPLE SELECTED FROM THE POPULATION OF ALL CORPORATION RETURNS

Sources of the Data

The statistical information in this report was estimated from a stratified sample, selected before audit, of corporation income tax returns filed in the district offices of the Internal Revenue Service and with the Office of International Operations in the National Office. The sampled returns reflected the business activities of the total number of domestic corporations and resident foreign corporations filing returns with accounting periods ended July 1962 through June 1963.

The number of Forms 1120, 1120L, 1120M, and 1120-F (for resident foreign corporations only) filed was counted at 1,193,438. This differed from the total number of corporations in existence in 1962 (excluding Small Business Corporations filing Forms 1120-S), chiefly because the Code permitted an affiliated group of corporations to file a single return containing the combined financial data for the group. For 1962, there were approximately 21,200 subsidiaries included in some 4,800 consolidated returns.

The sample was drawn to represent the total number of returns for 1962 regardless of when these returns were filed. Prior-year delinquent returns were included for the purpose of estimating current-year returns filed too late to be included in the sample. It was felt that, in general, the characteristics of returns due but not yet received could be represented best by the prior-year delinquent returns received during the current-year filing period. However, for large corporations, the prior-year return was excluded if the current-year return for the same company was available.

About 49,000 inactive corporation returns (other than Forms 1120-S) were counted among the total number, but the only financial data tabulated from these returns were for the companies' active controlled foreign corporations. Not counted in the total were tentative returns, amended returns which were not associated with the original returns, and returns of unincorporated businesses which elected to be taxed as corporations under section 1361 of the Code.

Sample Selection

Returns were grouped by type of return, by size of total assets, and by the 62 district offices and the Office of International Operations. The sample design was adapted to fit the regular return sorting and grouping procedures employed by the district offices to facilitate the processing of returns for revenue collection and audit purposes. For sample purposes, the groups were combined into classes which can be identified as follows for Forms 1120, 1120L, 1120M, and 1120-F (resident):

Sample class A.--Returns with net income or deficit of $1,000,000 or more, or total assets of $10,000,000 or more. Returns of corporations in sample class A were controlled by name.

Sample class B.--The following special types of returns unless they were included in sample class A: consolidated returns, returns with personal holding company

364-095 O - 69 - 16

schedules attached, life (Form 1120L) and mutual (Form 1120M) insurance company returns, returns with overpayment of tax, and returns of resident foreign corporations (Form 1120-F). In addition, other returns with both total assets of $1,000,000 under $10,000,000 and net income or deficit under $1,000,000.

Sample class C.--Returns other than the special return types described under sample class B, with total assets of $100,000 under $1,000,000 in the case of current-year returns, and with total assets either under $1,000,000 or not reported in the case of prior-year delinquent returns.

Sample class D.--Current-year returns, other than the special return types described under sample class B, with total reported assets greater than zero but less than $100,000.

Sample class E.--Current-year returns, other than the special return types described under sample class B, which showed assets zero or not reported.

The 56,309 returns in this class were represented by 5,313 sampled returns. About one-third of the sampled returns in this class were inactive corporation returns which showed no items of income or deductions.

The remaining two-thirds were separated into two groups: (1) returns with zero assets, and (2) returns with assets greater than zero but not reported. Returns with zero assets were filed, generally, by corporations which liquidated or merged during the taxable year. These situations were identifiable by information provided in the tax return. For returns with assets greater than zero but not reported, assets and liability data were estimated using other sources. This is described in the Explanation of Terms under Total assets.

For each of these sample classes the number of returns filed, the number of returns in the sample, and the prescribed and achieved sampling rates are given in table 7A.

Table 7A.—CORPORATION RETURNS OTHER THAN FORMS 1120-S: NUMBER FILED, NUMBER IN SAMPLE, AND PRESCRIBED AND ACHIEVED SAMPLING RATES, BY SAMPLE CLASS, 1962

Sample class	Number of returns		Sampling rate	
	Filed	In sample	Prescribed	Achieved
	(1)	(2)	(3)	(4)
Forms 1120, 1120L, 1120M, 1120-F (resident only), total	1,193,438	166,894	-	-
A	12,928	12,928	1.0000	1.0000
B	79,779	79,779	1.0000	1.0000
C	442,988	39,618	[1]	0.0894
D	601,434	29,256	0.0500	0.0486
E	56,309	5,313	0.1000	0.0944

[1]Of the 442,988 returns filed in Sample Class C, 366,920 current year returns were selected at a prescribed rate of 0.1000 and 76,068 prior year delinquent returns were selected at a prescribed rate of 0.0500.

NOTE: Form 1120-S returns filed by Small Business Corporations electing to be taxed through shareholders are not shown in this table because the provisions of the law for which statistics are shown in this report were, for the most part, not applicable to them. There were 125,093 such returns for 1962.

Method of Estimation

The total number of returns filed was determined from counts made and submitted by the district offices and the Office of International Operations in Washington, D. C. The adequacy of response by sample class was reviewed by applying the prescribed sample rates to the number of returns filed and comparing the expected sample size with the number of returns actually received from each office. Where receipts appeared to be inadequate, a follow-up procedure was employed to obtain the missing returns. Sample data were expanded to the sample class totals by weights obtained by dividing the total number of returns filed per sample class by the number of sample returns selected from that class.

DESCRIPTION OF THE SAMPLE OF CORPORATION RETURNS WITH FOREIGN OPERATIONS

Table 7B shows the number of sample returns and the estimated number of returns filed in the following three categories--returns with foreign tax credit, returns with one or more controlled foreign corporations, and Western Hemisphere trade corporations--which serve as the basis for most of the foreign income and tax data presented in this report. In addition, this report contains one summary table for corporation returns with ownership of foreign stock. All of these returns were a part of the regular sample used for *Statistics of Income--1962, Corporation Income Tax Returns*, rather than special samples designed for the statistics in this report.

Returns from Small Business Corporations electing to be taxed at the shareholder level were excluded from this report chiefly because they reported no income tax liability on the Forms 1120-S returns filed, and consequently claimed no foreign tax credit. Moreover, the form included no question on ownership of foreign corporation stock. No attempt was made to identify Small Business Corporations with controlled foreign corporations because it was assumed that the number was negligible.

Although the 444 resident foreign corporations filing on Form 1120-F, were included in the universe of returns shown in table 7A, they were not included in this report except in table 12, "Returns with Foreign Corporation Stock," because the provisions of the law covered by the statistics in this report were, for the most part, not applicable to them. Also, these corporations, some of which may have been controlled foreign corporations themselves, did not file Form 2952, "Information Return by a Domestic Corporation with Respect to Controlled Foreign Corporations," which was required only of a domestic corporation.

In processing the data on foreign income and taxes reported on returns with foreign tax credit supporting statements, a separate record was abstracted for each country for which a domestic corporation reported income or taxes on its Form 1118, "Statement in Support of Credit Claimed by Domestic Corporation for Taxes Paid or Accrued to Foreign Countries or Possessions of the United States." Each record represented a foreign country computation which took into account the foreign income and taxes for all operations in a particular foreign country. A separate record was also abstracted for each controlled foreign corporation or its subsidiary as reported on Forms 2952 filed with the domestic corporation's tax return. Tabulation of these records, using the weights given to the domestic corporation's return with which they were associated, provided the estimated number of foreign country computations shown on the Form 1118 and the estimated number of Forms 2952. These data are shown in table 7B.

Table 7B.—CORPORATION RETURNS WITH FOREIGN OPERATIONS: NUMBER IN SAMPLE AND ESTIMATED NUMBER FILED, 1962

Item	Returns with foreign tax credit	Returns with one or more controlled foreign corporations shown on Form 2952	Western Hemisphere trade corporation returns
	(1)	(2)	(3)
RETURNS IN SAMPLE			
Number of returns	n.a.	2,291	251
Number of returns with Forms 1118 filed in support of foreign tax credit claimed	3,356	n.a.	156
Number of foreign country computations shown on Forms 1118	8,073	n.a.	n.a.
Number of Forms 2952	n.a.	10,118	n.a.
ESTIMATED NUMBER OF RETURNS FILED			
Total number	5,266	2,642	612
As a percent of returns in sample	-	115	244
Estimated number of returns with Forms 1118 filed in support of foreign tax credit claimed	4,681	1,253	282
As a percent of returns in sample	139	-	181
Estimated number of foreign country computations shown on Forms 1118	10,060	n.a.	n.a.
As a percent of returns in sample	125	-	-
Estimated number of Forms 2952	n.a.	10,539	735
As a percent of returns in sample	-	104	-

n.a. - Not available.

The three categories of returns shown in the column headings of table 7B are not mutually exclusive because many domestic corporations were included in more than one of these three categories. For example, almost half of the 2,642 returns filed with one or more Forms 2952 and of the 612 returns filed by Western Hemisphere trade corporation showed a foreign tax credit.

Table 7B shows that the number of Form 1118 foreign country computations and Forms 2952 in the sample were, in the overall, weighted by a smaller amount than the sample returns with which they were associated. This occurred because although each foreign country computation and Form 2952 record was given the same weight as its related sample return, the sample returns with a weight of one generated more of these records than the sample returns with a weight greater than one. Returns with a weight of one represented the larger corporations, in terms of size of total assets. These corporations accounted for most of the foreign operations, both in terms of the number of countries and the number of controlled foreign corporations.

The impact of these large corporations on the statistics may be illustrated by the following facts from table 7B:

(1) The estimated total number of foreign country computations (10,060) is only about 25 percent greater than the number of foreign country computations shown on returns in the sample (8,073), although the estimated number of returns with Forms 1118 (4,681) is about 40 percent greater than the number of sample returns with Forms 1118 (3,356).

(2) The estimated total number of Forms 2952 (10,539) is only 4 percent greater than the number of Forms 2952 filed with returns in the sample (10,118), although the estimated number of returns with Forms 2952 (2,642) is 15 percent greater than the number in the sample (2,291).

Because of the predominence of large corporation returns sampled 100 percent, the data from Forms 1118 and Forms 2952 are subject to less sampling variability than most other corporation data. Most of the foreign income and tax data shown in the tables in this report are obtained from these forms. The sampling variability associated with these data are discussed below.

LIMITATIONS OF THE DATA

In this section, limitations of the data pertinent to the report as a whole are discussed. A more detailed description of the limitations applicable to data in the sections of this report on foreign tax credit, corporation returns with foreign corporation stock, controlled foreign corporations, and Western Hemisphere trade corporation returns is presented in those sections.

Sampling Variability

Since the data in this report were derived from a random sample of tax returns, they may differ from similar data obtained from a complete count or census because of the variability inherent in sampling. The tables on ownership of foreign corporation stock (table 12) and Western Hemisphere trade corporation returns (tables 31-35) were produced as part of the regular program for *Statistics of Income--1962, Corporation Income Tax Returns*. Frequencies and amounts were reviewed, and those considered subject to excessive sampling variability identified in these tables. Where sampling variability was considered excessive, data in the particular cells were deleted, or combined in such a way as to present totals for groups of cells whose combined sampling variability was not judged to be excessive. Where deletions were made in these tables, the applicable cells are footnoted. Where combinations were made, the combined totals are presented alongside the bracketed cells to which they relate.

The tables on foreign tax credit (tables 1-11) and controlled foreign corporations (tables 13-30) were produced as separate studies especially for this supplemental report. At least 3,000 of the sample returns with Forms 1118, or about 88 percent, and at least 2,260 of the sample returns with one or more Forms 2952, or about 99 percent, were sampled at a rate of 100 percent. An illustration of the extent of sampling at a rate of 100 percent and the resulting impact on the data is shown in table 7C.

Table 7C.—CORPORATION RETURNS WITH FOREIGN OPERATIONS: MINIMUM PERCENTAGE OF SELECTED ESTIMATES ATTRIBUTABLE TO RETURNS NOT SUBJECT TO SAMPLING VARIABILITY, 1962

Selected estimate	Returns with Forms 1118[1]	Returns with one or more Forms 2952
	(Percent)	
Number of returns	63	85
FOREIGN TAX CREDIT DATA		
Number of foreign country computations	73	n.a.
Foreign tax credit claimed	99	99
Taxable income from foreign sources	99	n.a.
CONTROLLED FOREIGN CORPORATION DATA		
Number of controlled foreign corporations	n.a.	95
Net profit before taxes	n.a.	99
Total assets	n.a.	99

[1]Of the sample returns with a foreign tax credit, as least 59 percent were sampled at a rate of 100 percent. These returns accounted for 99 percent of the total foreign tax credit claimed.

n.a. - Not available.

These data show that the returns sampled at a 100-percent rate accounted for virtually all of the estimated amounts and a substantial, though smaller, percentage of the estimated frequencies. Because of this, the data in the foreign tax credit and controlled foreign corporation tables were not reviewed for sampling variability. The estimated amounts are for the most part not subject to excessive sampling variability. In judging the reliability of the frequency data, it should be noted that the following estimates may be subject to excessive sampling variability: (1) frequencies greater than 10 and less than 200 associated with returns with total assets of less than $100 thousand, and (2) frequencies greater than 10 and less than 100 associated with returns with assets of $100 thousand but less than $1 million. However, the tables show that corporations in these two asset classes indicated relatively little foreign activity. The frequencies shown in these tables which are not classified by size of total assets of the domestic corporation are, as a whole, reliable because of the impact of returns sampled at the 100-percent rate. Frequencies of 10 or less are not subject to sampling variability.

Other Limitations Due to Sampling

For statistics based on returns sampled at less than 100 percent, a dash in any given table cell indicates that either there were no returns with the particular characteristic or, because of its rarity, instances of this characteristic were not present among the returns selected for the sample. However, for statistics based on returns selected for the sample at a rate of 100 percent, a dash indicates a presumption of no returns with the particular characteristic.

Response and Processing Limitations

In processing returns for revenue collection purposes in the district offices, as well as in processing the sample of such returns for statistical purposes, several steps were taken to reduce taxpayer reporting errors and other errors introduced during the course of processing the data. A large proportion of the returns were mathematically verified (although not audited) in the district office before they were made available for sample selection. Any corrections resulting from mathematical verification of the taxpayer's entries are reflected in the statistics.

An extensive system of sample management and control was used to insure the selection of the prescribed corporation sample. In addition, returns of corporations in sample class A were controlled on a name basis as a further check on the completeness of the sample.

In editing, transcribing, and tabulating the information from the sampled returns, additional checks were imposed to improve the quality of the resulting estimates. Returns which showed data in accompanying schedules but not on appropriate lines and returns with obvious errors were edited and properly transcribed. In addition, the more difficult cases, particularly those with missing data, were subjected to a special review in the Statistics Division. Discrepancies in the statistical editing were resolved and missing information obtained through field followups and other sources of information when available. In some cases, estimates were made when sufficient information was available to do so. Mechanical transcription of the data was verified through the process of repeat card punching, and prior to tabulating, numerous tests for consistency were applied using an electronic computer to assure that the proper balance and relationships between return items and statistical classifications were maintained. Finally, prior to publication, additional checks were made and tables were reviewed for accuracy and reasonableness, in light of provisions of tax law, accounting practices, taxpayer reporting variations and limitations, economic conditions, comparability with other statistical series, and techniques used in data processing.

However, the controls maintained over the selection of the sample returns, the processing of the source data, and the review of the statistics did not completely eliminate the possibility of error. Also, practical operating considerations necessitated allowance of reasonable tolerances in the statistical processing of the data.

General Undercoverage

Of the 5,266 corporations claiming a foreign tax credit, 585 did not include a Form 1118 statement or its equivalent to support the credit claimed. However, the majority of these firms were small; only 23 out of the 734 corporations with assets of $50 million or more did not include this statement. In addition, the following two groups of corporations having foreign operations would not be able to claim a foreign tax credit and, consequently, would not be included in the Foreign Tax Credit section of this report: (1) corporations with no United States income tax liability and (2) corporations exercising the option permitted by the Internal Revenue Code of deducting foreign taxes from gross income in computing net income. However, since it is generally more advantageous for a corporation to claim a credit for foreign taxes than to take a deduction from gross income for those taxes, it is probable that the number of returns and the dollar amounts on returns taking foreign taxes as a deduction from gross income were negligible.

Unlike Form 1118, which must be filed if a foreign tax credit is claimed by the domestic corporation, Form 2952 is an information return filed for controlled foreign corporations and does not relate to any specific item on the domestic corporation's income tax return. Consequently, the precise extent of nonfiling of Form 2952 cannot be determined. However, this nonfiling is probably small because failure to file Form 2952 does result in a penalty reduction of at least 10 percent in the creditable foreign taxes of all controlled foreign corporations and their subsidiaries for foreign tax credit purposes. Furthermore, even though no creditable foreign taxes were claimed, criminal penalties were provided for failure to file.

Although the data for returns taking the Western Hemisphere trade corporation deduction are complete, it was not always possible to identify those Western Hemisphere trade corporations not taking the deduction, most of whom either had a net operating loss or a deficit for the year. Consequently, the total number of Western Hemisphere trade corporation returns is somewhat understated.

Understatement or Overstatement of Specific Items of Data

In addition to the general undercoverage explained above, there is some understatement or overstatement of specific items due to the reporting of incomplete or abbreviated detail on the taxpayers' returns and schedules. In some instances, where taxpayers' schedules were incomplete or abbreviated, a simple adjustment provided the correct reporting of the data. In other instances, data were imputed from logical relationships with other information on the return. However, there were returns and schedules where the taxpayer entries did not reflect logical relationships between items on the return. Although these returns would be checked in a subsequent audit process, the entries were statistically processed for this report as reported by the taxpayer. The understatement or overstatement of specific items in each section of this report is explained in the detailed discussion of the Limitations of the data found in each section.

Scope of Foreign Income Covered

The foreign income of domestic corporations shown in this report covers all taxable income received from foreign sources, as well as the total income earned by foreign corporations controlled directly by a domestic corporation or indirectly through a controlled foreign corporation. Thus, the portion of foreign income not covered in any section of this report is the undistributed earnings of foreign corporations in which domestic corporations had some ownership, but which were neither controlled foreign corporations nor subsidiaries of controlled foreign corporations.

The sources of the data on foreign income included in this report and the components of foreign income reported in these sources are:

(1) Form 1120, filed by domestic corporations, includes all foreign income covered in the scope of this report, but specifically identifies only dividend income from foreign corporations. This dividend income represents only that portion of earnings from foreign corporations which was repatriated to the domestic corporation.

(2) Form 1118, filed in support of foreign tax credit claimed, provides taxable income from foreign sources in schedule A. This taxable income includes principally the net profits from foreign branch operations and dividends received from foreign corporations. However, it also includes other income--income from sales of real property, rents, interest, royalties, and compensation for labor or services. Since Form 1118 does not require separate figures for these components, taxpayers generally did not identify their different kinds of income. Thus only the total taxable income from foreign sources is shown in this report. Nevertheless, the major portion of the dividend component included in the taxable income shown in schedule A can be obtained from schedule B of Form 1118 which shows dividends paid to the domestic corporation by related foreign corporations, i.e., foreign corporations in which the domestic corporation owned at least 10 percent of the stock.

(3) Form 2952 was used to obtain the net profit of controlled foreign corporations (i.e., foreign corporations in which the domestic corporation owns more than 50 percent of the voting stock), and their foreign subsidiaries, as well as the dividends paid by these foreign corporations to their controlling domestic corporations.

There are certain limitations in adding the data on net profit of controlled foreign corporations and their subsidiaries, less dividends paid to their controlling domestic corporations, to the total taxable income from foreign sources (which includes net profit from branch operations) to get an estimate of the total foreign earnings of domestic corporations. The major limitations are as follows:

(1) Dividends paid by controlled foreign corporations and their subsidiaries to noncontrolling domestic corporations were not reported separately on Form 2952 and consequently could not be subtracted from the net profit of controlled foreign corporations and their subsidiaries. Therefore, net profit of controlled foreign corporations less dividends paid to their controlling domestic corporations includes dividends paid to noncontrolling corporations, and most of these dividends are also included in the taxable income from foreign sources reported on Form 1118.

(2) The total of net profit of controlled foreign corporations plus net profit of their subsidiaries is slightly overstated. The dividends paid by the subsidiaries directly to the foreign corporation controlling them are included in the net profit reported by both groups. These dividends could not be subtracted from the net profit of the subsidiaries because they were not reported separately on Form 2952.

(3) In general, most foreign accounting statements filed with Forms 2952 (from which the net profit of controlled foreign corporations were obtained) were translated and recast to conform to the generally accepted accounting principles of the United States parent corporation. These accounting principles are also used in determining the net profit from foreign branch operations for financial statements prepared for shareholders. However, for tax purposes, the taxable income shown on Form 1118 includes the net profit from foreign branch operations which have been determined under the provisions of the United States Internal Revenue Code. For example, when computing taxable income from a foreign branch, the domestic corporation can deduct a percentage or cost depletion allowance, whichever is higher, on each mineral property. Under generally accepted accounting principles, however, percentage depletion is not permitted. Therefore, in this instance, the net profit from branch operations included in taxable income is not conceptually comparable to the net profit of controlled foreign corporations.

Interpreting Geographic Area and Country Activity

Statistics in this report show geographic area and country information as reported on Forms 1118 and 2952. Taxable income from foreign sources shown on Form 1118 was generally reported for each country on the basis of the "source of income" rules in Code sections 861 through 864 and the regulations pertaining to these Code provisions. Although tax treaties with various countries covered source of income, the source rules in most treaties were similar to those found in the Code. The principles in the Code sections used in the allocation of

foreign income are summarized in the Explanation of Terms under Geographic classification: area or country.

It can be seen from the source rules that foreign income and taxes attributed to a particular country may include both income derived from, and taxes paid to, other countries. For example, all dividend income which the domestic corporation received from a related foreign corporation, and the foreign taxes paid and deemed paid on this income, were attributed to the country in which the related foreign corporation was incorporated, even though the foreign corporation may have conducted business in other countries as well. In addition, branch profits derived from the extractive industries, e.g., petroleum and metal mining, were ordinarily attributed entirely to the country in which the natural deposits were extracted, even though part of the income was earned by sales taking place in other countries. For a more detailed discussion, see Country classification under Limitations of the data in the Foreign Tax Credit section of this report.

Taxes on income from branch operations and from other receipts such as portfolio dividends, royalties, interest, etc., were generally reported on Form 1118 for that country to which the taxes were actually paid.

Most country data in the tables on controlled foreign corporations and their subsidiaries relate to the country of incorporation although the foreign corporations may have conducted all or part of their business outside the country of incorporation. Table 28, which presents data for controlled foreign corporations with principal place of business outside the country of incorporation, gives some indication of the magnitudes involved. However, no similar data are included in the foreign tax credit tables because Form 1118 does not provide for this type of information.

Relationship of Domestic Corporation Data to Geographic Area and Country Data

Certain financial statistics for the domestic corporation, such as total assets, net income, income subject to United States tax, and United States income tax before credits, are presented in the Foreign Tax Credit section for each country to which taxable income was attributed and foreign taxes were paid. Although these statistics indicate the characteristics of domestic parent corporations with operations in a particular country, they cannot be added to any meaningful totals since many firms operate in a number of countries. The financial statistics on the domestic corporation in the geographic area and country tables in the Controlled Foreign Corporations section show the number of domestic corporation returns that had one or more controlled foreign corporations in each country or geographic area. Since a domestic corporation may have a controlled foreign corporation in more than one country or geographic area, statistics on the number of domestic corporation returns in these tables are also not additive.

In the sections on Foreign Tax Credit and Western Hemisphere Trade Corporation Returns, as well as for some tables in the section on Controlled Foreign Corporations, classification by industrial activity is based solely on the *principal* business activity of the *domestic* corporation. Therefore, the industry classification may or may not accurately reflect the actual industrial activity of the foreign subsidiary or branch operating in a particular country or area, or of the Western Hemisphere trade corporation. This is especially true for consolidated returns. These consist of the operations of a group of companies where, for example, the foreign companies may be involved in sales and distribution, and the domestic companies may be involved in Manufacturing. Another example of the difference between the industrial activity of the domestic company and the industrial activity of the foreign branch or subsidiary is found in Petroleum refining and related industries. Although the domestic corporations were classified on the basis of total business receipts as Manufacturing firms, their foreign branches and/or subsidiaries in such countries as Venezuela, Iran, and Kuwait were engaged for the most part in the mining of crude petroleum.

With the increasing number of mergers, the industry classification of the domestic corporation is less likely to reflect the nature of its overseas operations or investments than before. This would be the case where the merger moves the buyer corporation into a different product market. It would also be the case with other kinds of mergers, where the buyer corporation moves into a new line of business in order to market the same product or gain control of the raw material from which to process the same product, as in the integrated petroleum extracting and refining industry.

Although some of the tables in the Controlled Foreign Corporation section are based on the industrial activity of the domestic parent corporation, a greater number are based on the industrial activity of the foreign corporation. Table 18 presents detailed information on the relationship between the industrial activity of the domestic parent and its foreign subsidiaries, respectively.

Accounting Periods Covered

The coverage of the sample represents all returns filed for 1962 with accounting periods ended July 1962-June 1963. Since the accounting periods for sample returns vary, and the accounting period on any individual return is a maximum of twelve months, collectively the returns in the sample represent a 23 month period from August 1961 (the first month of the earliest accounting period represented, August 1961-July 1962) through June 1963.

Actually, the returns in the sample may reflect operations of foreign corporations occurring before August 1961. The foreign income reported on Form 1118 may reflect the activity of a time prior to the start of the taxpayer's accounting period, since the dividends received from foreign corporations may have been paid from the accumulated profits of an earlier period of operation of the foreign corporation. Form 2952 was filed for (1) the controlled foreign corporation's annual accounting period ending with or within the domestic corporation's taxable year and (2) the subsidiary's (of the controlled foreign corporation) annual accounting period ending with or within the controlled foreign corporation's annual accounting period. Consequently, in those cases where the accounting periods do not coincide, the data on controlled foreign corporations and their subsidiaries would represent a somewhat earlier time period. However, the earliest accounting period would have begun January 1961, since Form 2952 was first required for accounting periods beginning after December 31, 1960.

GROSS INCOME

1. Gross receipts or gross sales ____ Less: Returns and allowances ____
2. **Less:** Cost of goods sold (Schedule A) and/or operations (attach schedule)
3. Gross profit
4. Dividends (Schedule C)
5. Interest on obligations of the United States, etc. issued:

	Gross amount	Amortizable premium
(a) Prior to 3-1-41		
(b) After 2-28-41		

6. Other interest
7. Rents
8. Royalties
9. Net gains (losses) (from separate Schedule D)
10. Other income (attach schedule)
11. TOTAL income, lines 3 to 10, inclusive

DEDUCTIONS

12. Compensation of officers (Schedule E)
13. Salaries and wages (not deducted elsewhere)
14. Repairs (do not include cost of improvements or capital expenditures)
15. Bad debts (from Schedule F if reserve method is used)
16. Rents
17. Taxes (attach schedule)
18. Interest
19. Contributions or gifts paid (attach schedule—see instructions for limitation)
20. Losses by fire, storm, shipwreck, or other casualty, or theft (attach schedule)
21. Amortization (attach schedule)
22. Depreciation (Schedule G)
23. Depletion (attach schedule)
24. Advertising
25. (a) Pension, profit-sharing, stock bonus, annuity plans (see instructions)
    (b) Other employee benefit plans (see instructions)
26. Other deductions (attach schedule)
27. TOTAL deductions in lines 12 to 26, inclusive
28. Taxable income before net operating loss deduction and special deductions (line 11 less line 27)
29. **Less:** (a) Net operating loss deduction (see instructions—attach schedule) ____
    (b) Special deductions (Schedule I)
30. Line 28 less line 29

TAX

31. TOTAL income tax (from line 9, Tax Computation Schedule, page 3)
32. Credits: (a) Tax paid with application for extension of time to file (att. Form 7004) ____
    (b) Payments and credits on 1962 Declaration of Estimated Tax ____
    (c) Credit from regulated investment companies (attach Form 2439) ____
    (d) Investment credit (attach Form 3468)
33. If tax (line 31) is larger than credits (line 32), the balance is TAX DUE. Enter balance here →
34. If tax (line 31) is less than credits (line 32) ____ Enter the OVERPAYMENT here →
35. Enter amount of line 34 you want: Credited on 1963 estimated tax ____ Refunded ____

I declare under the penalties of perjury that I have examined this return (including accompanying schedules and statements) and to the best of my knowledge and belief it is true, correct, and complete. If prepared by a person other than taxpayer, his declaration is based on all information of which he has any knowledge.

(Date) (Individual or firm signature of preparer) (Address)

Form 1120 (1962) Page 2

Schedule A.—COST OF GOODS SOLD. (See Instruction 2)
(Where inventories are an income-determining factor)

1. Inventory at beginning of year	
2. Merchandise bought for manufacture or sale	
3. Salaries and wages	
4. Other costs per books (attach schedule)	
5. Total	
6. Less: Inventory at end of year	
7. Cost of goods sold (enter here and on line 2, page 1)	

1. Was inventory valued at—Cost ☐; lower of cost or market ☐; LIFO ☐; other ☐? If other, attach explanation.
2. Have write-downs been made to inventory? Yes ☐ No ☐. If "Yes," were the write-downs computed on the basis of:
   (a) ☐ Percentage reductions from parts of the inventory
   (b) ☐ Percentage reductions from the total inventory
   (c) ☐ Valuation of individual items.
   If "a" or "b" is checked, enter the percentage of write-downs ____%. For "a," "b," or "c" enter the dollar amount of write-downs $____. (If not available, estimate and indicate that the figure is an estimate.)
3. Was the inventory verified by physical count during the year? Yes ☐ No ☐. If "No," attach explanation of how the closing inventory was determined.
4. Was there any substantial change in the manner of determining quantities, costs or valuations between the opening and closing inventories? Yes ☐ No ☐. If "Yes," attach explanation.

NOTE: If a direct answer cannot be given to a question, attach explanation.

Schedule C.—INCOME FROM DIVIDENDS

1. Name of declaring corporation	2. Domestic corporations taxable under chapter 1, Internal Revenue Code	3. Certain preferred stock of public utilities taxable under chapter 1, Internal Revenue Code	4. Foreign corporations	5. Other corporations
Totals				
Total of columns 2, 3, 4, and 5 (enter here and on line 4, page 1)				

Schedule D.—Separate Schedule D (Form 1120) should be used in reporting sales or exchanges of property. (See Instruction 9)

Schedule E.—COMPENSATION OF OFFICERS. (See page 5 of Instructions)

1. Name and address of officer	2. Official title	3. Time devoted to business	Percent of corporation stock owned		6. Amount of compensation	7. Expense account allowances
			4. Common	5. Preferred		
Total compensation of officers (enter here and on line 12, page 1)						

Schedule F.—BAD DEBTS. (See Instruction 15)

1. Taxable year	2. Notes and accounts receivable outstanding at end of year	3. Sales on account	4. Gross amount added to reserve	5. Amount charged against reserve	6. Reserve for bad debts at end of year
1959					
1960					
1961					
1962					

NOTE: Securities which are capital assets and which became worthless within the taxable year should be reported in separate Schedule D.

Schedule G.—DEPRECIATION. (See Instruction 22, page 3)

This schedule is designed for taxpayers using the new guidelines and administrative procedures described in Revenue Procedure 62-21 as well as for those taxpayers who wish to continue using previously authorized procedures. Where double headings appear use the first heading for the new procedure and the second heading for the older procedure.

1. Group and guideline class —OR— Description of property	2. Cost or other basis at beginning of year —OR— Cost or other basis	3. Asset additions in year (amount) —OR— Date acquired	4. Asset retirements in year (amount) (applicable only to Rev. Proc. 62-21)	5. Depreciation allowed or allowable in prior years	6. Method of computing depreciation	7. Class life —OR— Rate (%) or life	8. Depreciation for this year
1. Totals							
2. Less: Amount of depreciation claimed in Schedule A and elsewhere on return							
3. Balance—Enter here and on line 22, page 1							
4. Cost or other basis of fully depreciated assets still in use							

Form 1120 (1962) Page 3

Schedule H.—SUMMARY OF DEPRECIATION AND AMORTIZATION SCHEDULES

DEPRECIATION	Under Rev. Proc. 62-21	Other	AMORTIZATION	
1. Straight line method				
2. Declining balance method			1. Emergency facilities	
3. Sum of the years-digits method			2. Research or experimental	
4. Based on units of production			3. Exploration and development	
5. Addl. 1st year (Sec. 179)			4. Organizational	
6. Other methods			5. Trademark and trade name	
7. Total depreciation claimed			6. Total amortization claimed	

Schedule I.—SPECIAL DEDUCTIONS

1. Partially tax-exempt interest (see Instruction 5)		
2. Dividends-received:		
(a) 85 percent of column 2, Schedule C		
(b) 62.11⅝ percent of column 3, Schedule C		
(c) 85 percent of dividends received from certain foreign corporations		
3. Total dividends-received deductions (sum of lines 2(a), (b), and (c) but not to exceed 85 percent of the excess of line 28, page 1 over the sum of lines 1 and 5). (See instructions in case of net operating loss or if the corporation is a small business investment company.)		
4. Dividends paid on certain preferred stock of public utilities (see instructions in case of net operating loss)		
5. Western Hemisphere trade corporations (see instructions in case of net operating loss)		
6. Total special deductions (enter here and on line 29(b), page 1)		

TAX COMPUTATION SCHEDULE

1. (a) Line 30, page 1 ---- (b) plus line 1, Schedule I ---- Enter total here →		
2. If amount of line 1 is:		
(a) **Not over $25,000**—Enter 30 percent of line 1 (32 percent if a consolidated return)		
(b) **Over $25,000**—Enter 52 percent of line 1 (54 percent if a consolidated return)		
Subtract $5,500, and enter difference	5,500.00	
3. Adjustment for partially tax-exempt interest. Enter 30 percent of line 1 (b), but not in excess of 30 percent of line 1		
4. Normal tax and surtax (line 2 less line 3)		
5. Income tax (line 4, or line 22 of separate Schedule D)		
6. Credit allowed a domestic corporation for income taxes paid to a foreign country or United States possession (attach Form 1118)		
7. Balance of income tax (line 5 less line 6)		
8. Tax under section 541 of the Internal Revenue Code (from Schedule 1120 PH)		
9. Total income tax (line 7 plus line 8). **Enter here and on line 31, page 1**		

H. Date incorporated ----

I. (1) Did the corporation at the end of the taxable year own directly or indirectly 50 percent or more of the voting stock of a domestic corporation?.....Yes ☐ No ☐

(2) Did any corporation, individual, partnership, trust, or association at the end of the taxable year own directly or indirectly 50 percent or more of the corporation's voting stock?.....Yes ☐ No ☐ (For rules of attribution, see section 267 (c).)

If the answer to (1) or (2) is "Yes," attach separate schedule showing:
(a) name and address;
(b) percentage owned;
(c) date acquired; and
(d) the District Director's office in which the income tax return of such organization for the last taxable year was filed.

If the answer to (1) above is "Yes," include the income (or loss) from line 30, page 1, Form 1120 of such corporation for the taxable year ending with or within your taxable year.

If the answer to (2) above is "Yes," include (a) the amount of cash or stock dividends paid to such individual or organization and (b) identify form of organization.

J. Were Forms 1096 and 1099 filed for the calendar year 1962 in connection with:
Taxable dividends.....Yes ☐ No ☐
Other payments.....Yes ☐ No ☐

K. Did you have any contracts or subcontracts subject to the Renegotiation Act of 1951.....Yes ☐ No ☐
If "Yes," see Inst. K. Enter amount here.....

L. Did you at any time during the year own directly or indirectly any stock of a foreign corporation?.....Yes ☐ No ☐
If "Yes," attach statement as required by Instruction N.

M. Amount of income (or deficit) for: 1959.. ---- 1960.. ---- 1961.. ----

N. If a cooperative association, check type:
(1) ☐ farmers' purchasing or marketing; (2) ☐ consumers', or (3) ☐ other.

O. Did you claim a deduction for expenses connected with: (If answer to any question is "Yes," check applicable boxes within that question.)

(1) A hunting lodge ☐, working ranch or farm ☐, fishing camp ☐, resort property ☐, pleasure boat or yacht ☐, or other similar facility ☐? (Other than where the operation of the facility was the principal business.) Yes ☐ No ☐

(2) The leasing, renting, or ownership of a hotel room or suite ☐, apartment ☐, or other dwelling ☐, which was used by customers or employees or members of their families? (Other than use by employees while in business travel status.) Yes ☐ No ☐

(3) The attendance of your employees' families at conventions or business meetings? Yes ☐ No ☐

(4) Vacations for employees or members of their families? (Other than vacation pay reported on Form W-2.) Yes ☐ No ☐

P. Refer to instructions and state the:
Principal business activity ----
Principal product or service ----

Form 1120 (1962) Page 4

Schedule L.—BALANCE SHEETS. (See Instructions)

ASSETS	Beginning of taxable year (A) Amount	Beginning of taxable year (B) Total	End of taxable year (C) Amount	End of taxable year (D) Total
1. Cash				
2. Notes and accounts receivable				
(a) Less: Reserve for bad debts

Schedule M.—RECONCILIATION OF TAXABLE INCOME AND ANALYSIS OF EARNED SURPLUS AND UNDIVIDED PROFITS

1. Earned surplus and undivided profits at end of preceding taxable year (Schedule L)		9. Total distributions to stockholders charged to earned surplus during the taxable year: (a) Cash	
2. Taxable income before net operating loss deduction and special deductions (line 28, page 1)		(b) Stock of the corporation	
3. Nontaxable interest		(c) Other property (attach schedule)	
		10. Contributions in excess of 5% limitation	
		11. Federal income and excess profits taxes	
4. Other nontaxable income		12. Income taxes of foreign countries or United States possessions if claimed as a credit in whole or in part on line 6, page 3 Tax Computation	
		13. Insurance premiums paid on the life of any officer or employee where the corporation is directly or indirectly a beneficiary	
5. Charges against surplus reserves deducted from income in this return		14. Unallowable interest incurred to purchase or carry tax-exempt interest obligations	
		15. Excess of capital losses over capital gains	
6. Adjustments for tax purposes not recorded on books		16. Additions to surplus reserves (attach schedule)	
		17. Other unallowable deductions (attach schedule)	
		18. Adjustments for tax purposes not recorded on books (attach schedule)	
7. Sundry credits to earned surplus		19. Sundry debits to earned surplus (attach schedule)	
		20. Total of lines 9 to 19	
8. Total of lines 1 to 7		21. Earned surplus and undivided profits at end of the taxable year (Schedule L) (line 8 less line 20)	

☆ U.S. GOVERNMENT PRINTING OFFICE: 1962—O-646839

Instructions for Form 1120—1962

U.S. Corporation Income Tax Return

(References are to the Internal Revenue Code.)

GENERAL INSTRUCTIONS

A. Taxpayers required to file Form 1120.—

1. Domestic corporations, whether or not having any taxable income, unless exempt under section 501.

2. Real estate investment trusts defined under section 856.

3. Regulated investment companies defined under section 851.

4. Partnerships and proprietorships electing to be taxed as domestic corporations. (See section 1361.)

B. Returns required of certain organizations.—

1. Foreign corporations—file Form 1120F.

2. Life insurance companies subject to tax imposed by section 802—file Form 1120L.

3. Mutual insurance companies subject to tax imposed by section 821—file Form 1120M.

4. Exempt farmers cooperatives subject to tax under section 522—file Form 990–C.

5. Exempt organizations subject to tax imposed by section 511 on income derived from an unrelated trade or business—file Form 990–T.

6. Small business corporations which qualify and elect under section 1372(a) to have their taxable income taxed directly to shareholders—file Form 1120–S.

C. Information returns and other forms which may be required in addition to Form 1120 (other than certain specialized forms described below).—

1. *Forms 1096 and 1099.*—Information returns to be filed concerning certain salaries, fees, compensation, interest, rents, royalties, annuities, pensions, dividends, and foreign items.

2. *Forms 966 and 1099L.*—Information returns regarding dissolution or liquidation, and distributions in liquidation.

3. *Form 2952.*—Information return to be filed by a domestic corporation with respect to certain controlled foreign corporations.

4. *Form 1118.*—Statement in support of credit claimed by a domestic corporation for taxes paid or accrued to foreign countries or possessions of the United States.

5. *Form 2950.*—Statement in support of deductions for payments to an employees' pension, profit-sharing, stock bonus trust or annuity plan and compensation under a deferred payment plan.

6. *Form 3468.*—Computation of investment credit.

7. *Schedule PH (Form 1120).*—Computation of U.S. personal holding company tax.

D. Period to be covered by return.—Returns shall be filed for the calendar year 1962 or fiscal year beginning in 1962 and ending in 1963. For the procedure to follow in changing an established accounting period, see Section 1.442–1, Income Tax Regulations. In cases where prior approval must be obtained, file Form 1128, Application for Change in Accounting Period.

E. Accounting methods.—Taxable income shall be computed in accordance with the method of accounting regularly used by the taxpayer in maintaining its books and records. In all cases the method adopted should clearly reflect taxable income. (See Section 446.) Except in those cases where the law specifically permits it, a taxpayer may not change the method of accounting upon the basis of which it has reported its income in prior years (for its income as a whole or with respect to any separate trade or business) without first securing consent on Form 3115, Application for Change in Accounting Method.

Rounding off to whole-dollar amounts.—The money items on your return and accompanying schedules may be shown as whole-dollar amounts. Eliminate any amount less than 50 cents, and increase any amount from 50 cents through 99 cents to the next highest dollar.

F. Filing of return and payment of tax.—Returns of corporations must be filed on or before the 15th day of the third month following the close of the taxable year with the District Director of Internal Revenue for the district in which the corporation's principal place of business or principal office or agency is located. (Section 6072.)

659—16—77179–1

Request for automatic extension of 3 months for filing of return must be made on Form 7004. (Section 6081(b).)

The balance of tax due must be paid in full when the return is filed or in two installments, 50 percent on or before the 15th day of the third month and 50 percent on or before the 15th day of the sixth month following the close of the taxable year.

The tax may be paid in cash or by check or money order drawn to the order of "Internal Revenue Service." Cash payment should be made only in person at the District Director's office.

G. Declaration of estimated tax (Form 1120–ES).—A declaration of estimated tax must be filed by every corporation if its income tax for the taxable year can reasonably be expected to exceed $100,000 plus the amount of any estimated credits against the tax. In the case of affiliated corporations filing a consolidated return, see section 1502. Underpayment of installments of estimated tax will result in additional charges to the tax. If you have an underpayment of estimated tax and believe the additional charge should not be asserted due to the applicability of any of the "relief provisions" of section 6655(d), attach Form 2220 to your return.

H. Failure to file, etc.—Substantial additions to the tax are imposed for failure to file a return, for late filing, and for filing a false or fraudulent return.

I. Signature and verification.—The return must be signed either by the president, vice president, treasurer, assistant treasurer or chief accounting officer, or by any other corporate officer (such as tax officer) who is authorized to sign. A receiver, trustee, or assignee must sign any return which he is required to file on behalf of a corporation.

J. Domestic corporations entitled to benefits of section 931.—Domestic corporations within the possessions of the United States (except the Virgin Islands) may report as gross income only gross income from sources within the United States, provided (*a*) 80 percent or more of the gross income for the 3-year period immediately preceding the close of the taxable year (or such part thereof as may be applicable) was derived from sources within a possession of the United States, and (*b*) 50 percent or more of the gross income for such period or such part thereof was derived from the active conduct of a trade or business within a possession of the United States.

K. Information regarding renegotiable contracts.—Every corporation which held, during the taxable year, contracts or subcontracts which were subject to the Renegotiation Act of 1951 shall, in answer to question K, page 3, state the actual or, if not accurately determinable, its best estimate of the aggregate gross dollar amount billed during the current taxable year under all contracts and/or subcontracts.

L. Consolidated returns.—Subject to the provisions of sections 1501 through 1552 and the regulations, an affiliated group of corporations may make a consolidated income tax return in lieu of separate returns. The making of a consolidated return shall be upon the condition that all corporations which at any time during the taxable year have been members of the affiliated group consent to all the consolidated return regulations prescribed under section 1502 prior to the last day prescribed by law for the filing of such return. The common parent corporation, when filing a consolidated return, shall attach thereto a schedule showing the names and addresses of all the corporations included in the return. Form 851, Affiliations Schedule, should be obtained from the District Director of Internal Revenue and filed as a part of the return. Each subsidiary must prepare two signed copies of Form 1122 authorizing the making of the return on its behalf. One such form shall be attached to the consolidated return as a part thereof, and the other shall be filed, at or before the time the consolidated return is filed, in the office of the District Director for the subsidiary's district.

Supporting schedules shall be filed with the consolidated return. These schedules shall be prepared in columnar form, one column being provided for each corporation included in the consolidation, showing in detail the items of gross income and deductions and the computation of taxable income; one column for a total of like items before adjustments are made; one column for intercompany eliminations and adjustments; and one column for a total of like items after giving effect to the eliminations and adjustments. The

PAGE 2

items included in the column for eliminations and adjustments should be symbolized to identify contra items affected, and suitable explanations appended, if necessary. Similar schedules shall also contain in columnar form a reconciliation of surplus for each corporation, together with a reconciliation of the consolidated surplus. A schedule which sets forth the basis of property transferred to or received from an affiliated, subsidiary, or parent corporation must also be attached.

Consolidated balance shects as of the beginning and close of the taxable year of the group shall accompany the consolidated return in a form similar to that required for reconciliation of surplus.

M. Tax on improperly accumulated earnings.—In order to prevent accumulation of earnings and profits for the purpose of enabling shareholders to avoid the tax on individuals, section 531 provides an additional tax upon the accumulated taxable income of corporations formed or availed of for the purpose of such tax avoidance.

N. Stock ownership in foreign corporations.—In addition to the information to be shown in Schedule C of the return, a corporation owning directly or indirectly any stock of a foreign corporation must attach a statement showing the name and address of each company and the total number of shares of each class of outstanding stock owned during the taxable year. If the corporation owned 5 percent or more in value of the outstanding stock of a foreign personal holding company, attach a statement setting forth in complete detail the information required by section 551 (d).

O. Balance sheets.—The balance sheets, Schedule L, should agree with the books of account or any differences should be reconciled. The balance sheets for a consolidated return of affiliated corporations should be furnished in accordance with Instruction L. All corporations reporting to the Interstate Commerce Commission or to any National, State, municipal, or other public officer, may submit, in lieu of Schedule L, copies of their balance sheets prescribed by such authorities as at the beginning and end of the taxable year.

Line 10, Schedule L, should show land less any accumulated amortization of the land as an emergency facility under the authority of section 168.

P. Forms other than prescribed by return.—Banks, insurance companies, and other corporations required to submit substantially similar statements of income and expenses to any National, State, municipal, or other public officer may submit with the return a statement of income and expenses in the form furnished to such officer, in lieu of the information requested in lines 1 to 30, page 1, except that a railroad company may submit with the return a statement on Form 1090. In such cases the taxable income will be reconciled by means of Schedule M with the net profits shown by the income and expense statement submitted, and should be entered as line 30, page 1.

Q. Attachments.—Attachments may be used in the preparation of your return if the lines on the form schedules are not sufficient for your needs. The attachment must contain all required information, follow the format of the official schedules and must be attached to the return in the same sequence as the schedules appear on the official forms. If an attachment is used in place of a schedule having a summary line on page 1 of the form the total need not be entered on the schedule, but must be entered on page 1.

R. Total assets.—Enter the total assets as of the end of the taxable year as shown on line 13, Schedule L. In the event there are no assets at the end of the taxable year, show the total assets as of the beginning of the taxable year.

SPECIFIC INSTRUCTIONS (Numbered to correspond with the line numbers on page 1)

2. Cost of goods sold.—If the production, manufacture, purchase, or sale of merchandise is an income-determining factor in the trade or business, inventories of merchandise on hand should be taken at the beginning and end of the taxable year, and may be valued at cost, or at cost or market, whichever is lower, or by any other permissible method.

An inventory method once properly adopted is controlling until permission to change is obtained from the Commissioner. Application for permission to change an inventory method must be made on Form 3115 and filed with the Commissioner within 90 days after the beginning of the taxable year in which it is desired to effect a change. In case the inventories reported do not agree with the balance sheet, attach a statement explaining the difference.

A corporation electing to use the last-in, first-out method of valuing inventory provided for in section 472 must file Form 970 with the return for the first year of the election. Thereafter, attach separate schedule showing: (1) a summary of all inventories; (2) with respect to any inventories computed under section 472, the computation of the quantities and cost by acquisition levels.

Cost of operations (where inventories are not an income-determining factor).—If the amount entered on line 2 includes an amount applicable to cost of operations, attach a schedule showing: (1) Salaries and wages; and (2) other costs in detail.

5. Interest on obligations of the United States, etc.—Enter on line 5(a) interest on obligations of the United States, etc. issued prior to March 1, 1941, of (1) U.S. Savings and Treasury bonds owned in excess of the principal amount of $5,000 and (2) obligations of a U.S. instrumentality. Also enter on line 3, Schedule M, all interest received or accrued during the year on the various obligations. The net amount of interest reported on line 5(a) is also allowable as a deduction. See the instructions for Schedule I. Enter on line 5(b) interest on such obligations issued after February 28, 1941. For provisions relating to amortizable bond premium, see section 171.

For special rules applicable to dealers in securities, with respect to premium attributable to certain tax-exempt securities, see section 75.

Non-interest-bearing obligations issued at a discount.—Taxpayers on the cash basis may elect, as to all non-interest-bearing obligations issued at a discount and redeemable for fixed amounts increasing at stated intervals (for example, United States Savings Bonds), to include the increase in redemption price applicable to the current year. For the year of election the total increase in redemption price of such obligations occurring between the date of acquisition and the end of the year must be included. Attach statement listing obligations owned and computation of the increase. (Section 454.)

6. Other interest.—Enter on line 6, the amount of interest on loans, notes, mortgages, bonds, bank deposits, corporate bonds, etc. The term "corporate bonds" includes bonds, debentures, notes, certificates of indebtedness, or other evidences of indebtedness issued by any corporation and bearing interest, with interest coupons or in registered form. For provisions relating to amortizable bond premium, see section 171.

7. Rents.—Enter the gross amount received for the rent of property. Any expenses, including repairs, interest, taxes, and depreciation should be included in the proper lines for deductions. In the case of a lease entered into prior to January 1, 1954, if both lessor and lessee are corporations and if under the lease the lessee is obligated to pay any part of the lessor's income tax on the rental payment, this tax is excluded from lessor's gross income and may not be deducted by lessee. (Section 110.)

8. Royalties.—Enter the gross amount received as royalties. If a deduction is claimed for depletion, it must be reported on line 23.

9. Gains and losses from sales or exchanges of capital assets and other property.—The computation of gains and losses from sales or exchanges of capital assets and property other than capital assets should be made on separate Schedule D and filed with Form 1120. Every sale or exchange of property, even though no gain or loss is indicated, must be reported in detail. If for any taxable year the net long-term capital gain exceeds the net short-term capital loss, or in case of only a net long-term capital gain, a computation of the alternative tax should be made on separate Schedule D.

10. Other income.—Enter total amount of other income not reported elsewhere in the return and attach schedule showing details.

14. Repairs.—Enter the cost of incidental repairs, including labor, supplies, and other items, which do not add to the value or appreciably prolong the life of the property. Expenditures for new buildings, machinery, equipment, or for permanent improvements or betterments which increase the value of the property are chargeable to capital account.

15. Bad debts.—Bad debts may be treated in either of two ways—(1) by a deduction from income in respect of debts which become worthless in whole or in part, or (2) by a deduction from income of a reasonable addition to a reserve for bad debts. (Section 166.)

A taxpayer filing a first return of income may select either of the two methods, and that method must be followed for subsequent years, unless permission is granted by the Commissioner to change to the other method. Application for permission to change the method must be made on Form 3115 within 90 days after the

659—IC—77179-1

beginning of the taxable year for which it is desired to effect the change.

Worthless debts arising from unpaid rents, and similar items of taxable income, will not be allowed as a deduction unless the income such items represents has been included in the return of income for the year for which the bad debt deduction is claimed, or for a previous year.

For treatment of bad debts of a mutual savings bank not having capital stock represented by shares, a domestic building and loan association, and a cooperative bank without capital stock organized and operated for mutual purposes and without profit, see section 593 and the regulations thereunder.

16. Rents.—Enter rent paid or accrued for business property in which the corporation has no equity. With respect to leases entered into prior to January 1, 1954, see instruction No. 7.

17. Taxes.—Enter taxes paid or accrued during the taxable year and attach a schedule showing the type and amount of tax. Do not include Federal income, war-profits, and excess-profits taxes; estate, inheritance, legacy, succession, and gift taxes; foreign or United States possession income taxes if any credit is claimed in line 6 (tax computation); Federal taxes paid on bonds containing a tax-free covenant, nor taxes not imposed upon the taxpayer. See section 164 (d) regarding apportionment of taxes on real property between seller and purchaser.

18. Interest.—Enter interest paid or accrued on business indebtedness. Do not include interest on indebtedness incurred or continued to purchase or carry obligations the interest on which is wholly exempt from income tax. (Section 265.)

See section 267 for limitation on deductions for unpaid expenses and interest in the case of transactions between related taxpayers.

19. Contributions or gifts paid.—Enter contributions or gifts actually paid within the taxable year to or for the use of (1) a State, a possession of the United States, or any political subdivision of any of the foregoing, or the United States or the District of Columbia for exclusively public purposes; (2) a corporation, trust, or community chest, fund, or foundation, created or organized in the United States or in any possession thereof or under the law of the United States, or of any State, or of the District of Columbia, or of any possession of the United States, organized and operated exclusively for religious, charitable, scientific, literary, or educational purposes or the prevention of cruelty to children or animals (but in the case of contributions or gifts to a trust, chest, fund, or foundation only if such contributions or gifts are to be used within the United States or any of its possessions exclusively for such purposes), no part of the net earnings of which inures to the benefit of any private shareholder or individual, and no substantial part of the activities of which is carrying on propaganda, or otherwise attempting to influence legislation; (3) posts or organizations of war veterans, or auxiliary units of, or trusts or foundations for, any such posts or organizations, if such posts, organizations, units, trusts, or foundations are organized in the United States or any of its possessions, and if no part of their net earnings inures to the benefit of any private shareholder or individual; or (4) nonprofit cemetery or burial companies. The amount claimed shall not exceed 5 percent of the corporation's taxable income computed without regard to (1) this deduction, (2) the "special deductions" in line 29 (b), and (3) any net operating loss carryback to the taxable year under section 172.

In the case of a corporation on the accrual basis, any contribution or gift will, at the election of the taxpayer made at the time the return is filed, be considered as paid during the taxable year if payment is actually made on or before the fifteenth day of the third month following the close of the taxable year, and if the contribution or gift has during the taxable year been authorized by the board of directors of the corporation. A copy of such authorization must be attached to the return.

Do not deduct as a business expense charitable contributions which come within the above description, but which are unallowable in whole or in part because of the limitation contained in section 170. (Section 162 (b).)

Any contributions paid during the taxable year in excess of the amount deductible may be carried over and deducted in the two succeeding taxable years subject to the 5 percent limitation provided in section 170 (b) (2). In a taxable year to which there is a net operating loss carryover and charitable contributions in excess of the amount deductible (or a charitable contribution carryover from a preceding taxable year), see section 170 (b) (3).

Attach a schedule showing the name and address of each organization and the amount paid. If there is included a contribution carryover, show the amount and how the carryover was determined.

20. Losses by fire, storm, shipwreck, or other casualty, or theft.—Enter losses sustained during the year, arising from fire, storm, shipwreck, or other casualty. For determination of the amount deductible, see section 165 (b). Theft losses are deductible only in the year in which discovered.

21. Amortization.—If a deduction is claimed on account of amortization, attach a schedule showing: (1) A description of the facilities or expenditures being amortized; (2) date acquired, completed, or expended; (3) amount being amortized; (4) amortization deducted in prior years; (5) amortization period (number of months); (6) amortization for this year; and (7) the total amount of amortization less the amount claimed in Schedule A and elsewhere on the return. A summary of the total amortization for each facility or expenditure must be shown in Schedule H.

The law makes special provisions for amortization of the following kinds of assets and expenditures:

(*a*) *Emergency facilities.*—Section 168;

(*b*) *Research and experimental expenditures.*—Section 174;

(*c*) *Exploration expenditures.*—Section 615;

(*d*) *Development expenditures.*—Section 616;

(*e*) *Organizational expenses.*—Section 248; and

(*f*) *Trade-mark and trade-name expenditures.*—Section 177.

For details concerning the information which must be furnished in the statements of election required by these sections, consult your District Director.

22. Depreciation.—If a deduction is claimed on account of depreciation, fill in Schedule G. A reasonable allowance for the exhaustion, wear and tear, and obsolescence of property used in the trade or business or of property held by the taxpayer for the production of income shall be allowed as a depreciation deduction. (Section 167.) The allowance does not apply to inventories or stock-in-trade nor to land apart from the improvements or physical developments added to it. Depreciation on leasehold improvements, patents and copyrights shall be included in Schedule G.

Adjustments to basis of property: (a) Investment credit.—The cost or other basis of property which qualifies for the investment credit shall be reduced by an amount equal to 7 percent (3 percent for public utilities) of the qualified investment.

(b) Additional first-year depreciation.—If a taxpayer elects to claim the additional first-year allowance under section 179, the basis of the property must be adjusted for the amount of the deduction so claimed.

(c) Salvage value.—Salvage value must be taken into account in determining the depreciation deduction (except under declining balance method) either by a reduction of the amount subject to depreciation, or by a reduction in the rate of depreciation, but in no event shall an asset (or an account) be depreciated below a reasonable salvage value. In computing the basis on which depreciation may be taken for personal property, other than livestock, salvage value need not be taken into account, if it does not exceed 10 percent of the cost or other basis of the property. If salvage value exceeds 10 percent, only the excess need be taken into account. These provisions apply to property with a useful life of 3 years or more which was acquired after October 16, 1962.

New Depreciation Guidelines and Rules

Revenue Procedure 62–21 dated July 12, 1962, sets forth new standards and procedures for determining depreciation. The new guideline lives for guideline classes (broad categories not item-by-item) are in most cases substantially shorter than those previously used. These new guideline lives and rules are applicable to all depreciable property including existing assets as well as new acquisitions; however, they do not supersede existing rules and procedures for any taxpayer who wishes to continue to use them.

Taxpayers who wish to use the new provisions must use them for all assets in a particular guideline class. Taxpayers may use class lives equal to or longer than the guideline lives for 3 years and may continue to use them thereafter if certain standards are met and replacement practices are consistent with the lives used.

The depreciation schedule provided on the return is to be used for reporting depreciation under both Revenue Procedure 62–21 and previously prescribed rules and standards. Although depreciation reported under the revenue procedure should be shown

859—16—77179–1

on the basis of group and guideline class, it is not necessary to disturb your present depreciation accounts.

Revenue Procedure 62–21 is contained in IRS Publication No. 456 (9–62), which may be purchased for 25 cents from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

DEPRECIATION METHODS

Following is a brief description of the various methods of depreciation which may be used under either Revenue Procedure 62–21 or previously prescribed rules and standards:

(*a*) *Straight line method.*—To compute the deduction, add the cost of improvements to the cost (or other basis) of the property and deduct the total depreciation allowed or allowable. Divide the result by the number of years of useful life remaining to the asset—the quotient is the depreciation deduction.

(*b*) *Declining balance method.*—A uniform rate is applied each year to the remaining cost or other basis of property determined at the beginning of such year. For property acquired before January 1, 1954, or used property whenever acquired, the rate of depreciation under this method may not exceed one and one-half times the applicable straight-line rate.

(*c*) *Special rules for new assets acquired after December 31, 1953.*—The cost or other basis of an asset acquired after December 31, 1953, may be depreciated under methods proper in the past; or, it may be depreciated under any of the following methods provided (1) that the asset is tangible, (2) that it has an estimated useful life of three years or more to the taxpayer, and (3) that the original use of the asset commenced with the taxpayer and commenced after December 31, 1953.

(*1*) *Declining balance method.*—This method may be used with a rate not in excess of twice the applicable straight-line rate.

(*2*) *Sum of the years-digits method.*—The deduction for each year is computed by multiplying the cost or other basis of the asset by the number of years of useful life remaining (including the year for which the deduction is computed) and dividing the product by the sum of all the digits corresponding to the years of the estimated useful life of the asset. In the case of a 5-year life this sum would be 15 or (5+4+3+2+1). For the first year five-fifteenths of the cost would be allowable, for the second year four-fifteenths, etc.

(*3*) *Other methods.*—A taxpayer may use any consistent method which does not result in accumulated allowances at the end of any year greater than the total of the accumulated allowances which would have resulted from the use of the declining balance method. This limitation applies only during the first two-thirds of the useful life of the property.

(*d*) *Section 179—Additional first-year depreciation allowance.*—Corporations may elect to write off 20 percent of the cost of tangible personal property, but only to the extent of an aggregate cost of $10,000, for the first taxable year for which a deduction is allowable under section 167. The cost of property does not include so much of the basis of such property as is determined by reference to the basis of other property held at any time by the person acquiring such property. This additional depreciation is limited to property with a remaining useful life of 6 years or more and which is not acquired from an affiliated corporation (as defined in section 1504, except that "more than 50 percent" stock ownership is substituted for "at least 80 percent" wherever it appears in section 1054 (a)). All members of the affiliated group will be treated as one taxpayer, and the $10,000 limitation will be apportioned among the members in the manner prescribed by regulations. Further, for this allowance to apply in any case, the basis of the property must not be determined in whole or in part by reference to the transferor's basis. Depreciation on the remaining cost of the property may be taken under any of the methods indicated above. The additional first-year depreciation of an asset should be shown on a separate line of the depreciation schedule rather than included on the line used to show the regular depreciation of the asset.

A summary of the total depreciation for each method must be shown in Schedule H.

23. Depletion.—If a deduction is claimed on account of depletion, procure from the District Director: Form M (mines and other natural deposits), Form O (oil and gas), or Form T (timber), fill in and file with return. If complete valuation data have been filed with questionnaire in previous years, then file with your return information necessary to bring your depletion schedule up to date, setting forth in full a statement of all transactions bearing on deductions from or additions to value of physical assets during the taxable year with explanation of how depletion deduction for the taxable year has been determined. (Sections 611, 612, and 613.) Expenditures to be deferred and deducted ratably under the election provided in sections 616 (b), relating to certain expenditures in the development of mines, and 615 (b), relating to deductions for mine exploration, are not to be taken into account in determining the adjusted basis for property for the purpose of computing a deduction for depletion under section 611.

For details concerning the information which must be furnished in the election to aggregate separate operating mineral interests under section 614 (b), consult your District Director.

24. Advertising.—Enter the total amount paid or incurred during the year for advertising. Expenditures for advertising, to be deductible, must be ordinary and necessary and bear a reasonable relation to the business activities in which the corporation is engaged.

25 (*a*). File Form 2950 to substantiate the deduction claimed for amounts contributed to pension, profit-sharing, stock bonus, and annuity plans under section 404. Form 2950 must be filed for years other than the first year a deduction is claimed and may be used for the first year instead of submitting the information required by Section 1.404 (a)–2 (a), Income Tax Regulations.

25 (*b*). *Other employee benefit plans.*—Enter deductions for contributions to employee benefit plans other than those claimed on line 25 (a), such as insurance, health, or welfare plans. Submit with the return a schedule for each plan showing (1) the nature of benefits, i.e., group term life insurance, group permanent life insurance, noninsured death benefit, hospitalization, surgical, medical, sickness, accident, major medical expense, unemployment benefit, or other welfare benefits; (2) method of financing, i.e., insured, industry or areawide fund, self-insured fund, or direct benefit payments; (3) the amount of deduction; (4) the amount of employee contributions; (5) the number of employees covered; and (6) if a self-insured plan, the amount of benefits paid during the taxable year. Also show the number of employees employed by the corporation.

26. Other deductions authorized by law.—Enter any other authorized deductions for which no space is provided on the return. Any deduction claimed should be explained in an attached schedule.

No deduction is allowable for the amount of any item or part thereof allocable to a class of exempt income other than interest. For nonallowance of interest on indebtedness incurred or continued to purchase or carry tax-exempt securities, see instruction 18. Items directly attributable to wholly exempt income shall be allocated thereto, and items directly attributable to any class of taxable income shall be allocated to such taxable income. If an item is indirectly attributable both to taxable income and exempt income, a reasonable proportion thereof, determined in the light of all the facts and circumstances in each case, shall be allocated to each. A taxpayer receiving any such exempt income, or holding any property or engaging in any activity the income from which is exempt shall submit with its return as a part thereof an itemized statement, in detail, showing (1) the amount of each class of exempt income, and (2) the amount of expense items allocated to each such class (the amount allocated by apportionment being shown separately).

In the case of mutual savings banks, cooperative banks, and domestic building and loan associations, any amounts paid or credited to the accounts of depositors or holders of accounts as dividends on their deposits or withdrawable accounts, if such amounts may be withdrawn on demand subject only to customary notice of intention to withdraw, are allowable deductions in computing taxable income. (Section 591.)

Under section 592 a special deduction in computing taxable income is allowed a mutual savings bank not having capital stock represented by shares, a domestic building and loan association, or a cooperative bank without capital stock organized and operated for mutual purposes and without profit, for repayment during the taxable year of loans made before September 1, 1951, by the United States or its wholly owned agencies, or by a mutual fund established under the authority of State law.

o59—16—77179–1

29. (a) Net operating loss deduction.—The "net operating loss deduction" is the sum of the net operating loss carryovers and carrybacks to the taxable year. (Section 172 (a).) A net operating loss may be carried back 3 years and carried over 5 years. The net operating loss must first be carried to the earliest of the 8 taxable years to which it may be carried, then to the next earliest year, etc. The portion of such loss which shall be carried to each of the other 7 taxable years shall be the excess, if any, of the amount of such loss over the sum of the taxable income for each of the prior taxable years to which such loss may be carried. (Section 172 (b).)

The term "net operating loss" means the excess of allowable deductions over gross income, computed with the following modifications:

(*a*) No net operating loss deduction is allowed.

(*b*) The special deductions provided in section 242 (partially tax-exempt interest) and section 922 (Western Hemisphere trade corporations) are not allowed.

(*c*) The special deductions allowed by section 243 (dividends received by corporations), section 244 (dividends received on certain preferred stock of public utilities), and section 245 (dividends received from certain foreign corporations) are computed without regard to the 85-percent limitation provided in section 246 (b). See section 1.172–2 of the regulations.

(*d*) The special deduction allowed by section 247 (dividends paid on certain preferred stock of public utilities) is computed without regard to the provisions of subsection (a) (1) (B) of such section. (Section 172 (d).)

As stated, the net operating loss deduction is the sum of the carryovers and carrybacks. However, the following modifications must be taken into account in determining the taxable income for any year which must be subtracted from a net operating loss to determine the portion of such loss which will still be available to carry to a subsequent year:

(*a*) The special deductions provided in sections 242 (partially tax-exempt interest) and 922 (Western Hemisphere trade corporations) are not allowed.

(*b*) The amount of the net operating loss deduction is determined without regard to the net operating loss for the loss year or any taxable year thereafter.

If the corporation desires prompt adjustment for an overpayment attributable to a net operating loss carryback, an application for a tentative adjustment should be filed on Form 1139 within 12 months after the close of the taxable year in which the net operating loss is sustained. (Section 6411.)

For treatment of net operating loss carryovers in certain corporate acquisitions, see section 381.

For special limitation on net operating loss carryovers in case of a corporate change of ownership, see section 382.

Sections 852 (b) (2) and 857 (b) (2) provide that no net operating loss deduction shall be allowed in the case of a regulated investment company or a real estate investment trust.

Attach a schedule showing your computation.

29. (b) Special deductions.—See the instructions for Schedule I.

32. Credits.—Enter all payments and credits except the credit allowed for income taxes paid to a foreign country or U.S. possession (line 6, Tax Computation Schedule).

35. If you elect to have all or part of the overpayment applied to your estimated tax, no interest shall be allowed on such portion of the overpayment credited.

EXPENSE ACCOUNT ALLOWANCES—SCHEDULE E, COLUMN 7

Expense account allowance means: (1) amounts, other than compensation, received as advances or reimbursements, and (2) amounts paid by or for the corporation, for expenses incurred by or on behalf of an officer including all amounts charged through any type of credit card.

However, this term does not include amounts paid for: (*a*) the purchase of goods for resale or use in your business; (*b*) incidental expenses, such as the purchase of office supplies for the corporation or local transportation in connection with an errand; and (*c*) such fringe benefits as hospitalization insurance, approved pension trust funds and unemployment insurance.

Column 7 of Schedule E is to be completed for your 25 highest paid officers. To determine the highest paid officers for this purpose all allowances including expense account allowances as described above must be added to each officer's compensation. Column 7 need not be completed for any officer for which the combined amount is less than $10,000.

The information is to be submitted by each member of an affiliated group which files a consolidated return.

For this purpose an officer is a person who is elected or appointed to office or who is designated as such in the corporation's charter or bylaws such as regular officers, chairman of the board, etc.

SCHEDULE I—SPECIAL DEDUCTIONS

1. Partially tax-exempt interest.—Enter the amount received as interest on obligations of the United States or on obligations of corporations organized under Act of Congress which are instrumentalities of the United States, but only if (1) such interest is included in gross income; and (2) such interest is exempt from normal tax under the Act authorizing the issuance of such obligations. This deduction must be reduced by any amortizable bond premium as provided in section 171.

2. Dividends-received deductions.—(*a*) *Dividends received from a domestic corporation.*—Enter an amount equal to 85 percent of the amount received as dividends (except dividends on certain preferred stock of public utilities) from a domestic corporation subject to income tax. Amounts received as dividends from mutual savings banks, cooperative banks, and domestic building and loan associations and allowed as a deduction to such banks or building and loan associations shall not be treated as dividends. In the case of dividends received from a regulated investment company, see section 854 regarding limitations on amount deductible. Any dividend received from a real estate investment trust which, for the taxable year of the trust in which the dividend is paid, qualifies under sections 856–858 shall not be treated as a dividend. For taxable years beginning after September 2, 1958, a small business investment company operating under the Small Business Investment Act of 1958 can take as a deduction an amount equal to 100 percent of the dividends received.

(*b*) *Dividends received on certain preferred stock of public utilities.*—Enter 62.115 percent of the amount received as dividends on the preferred stock of a public utility which is subject to income tax and is allowed a deduction, as provided in section 247, for dividends paid.

(*c*) *Dividends received from certain foreign corporations.*—Enter 85 percent of dividends received from certain foreign corporations. See sections 243 (d) and 245 for qualifications and limitations on the amount of this deduction.

In general, no dividend-received deduction will be allowed on any share of stock (A) which is sold or otherwise disposed of in any case in which the corporation has held such share for 15 days or less, or (B) to the extent the corporation is under an obligation to make corresponding payments with respect to substantially identical stock or securities. Where the stock has preference in dividends, the holding period is 90 days instead of 15 if the corporation receives dividends with respect to such stock which are attributable to a period or periods aggregating in excess of 366 days.

3. Total dividends-received deductions.—In a year in which a net operating loss occurs, sections 172 (d) and 246 (b) provide that the 85-percent limitation on the amount of these special deductions shall not apply. In the case of a small business investment company, the dividends-received deduction of 100 percent reported on line 3 is not subject to the overall 85-percent limitation.

4. Deduction for dividends paid on certain preferred stock of public utilities.—In the case of a public utility there is allowed in accordance with section 247, an amount equal to 26.923 percent of the lesser of (1) the amount of dividends paid on its preferred stock during the taxable year, or (2) the taxable income for the taxable year computed without regard to the deduction provided in section 247. In a year in which a net operating loss occurs, section 172 (d) provides that this special deduction shall be computed without regard to section 247 (a) (1) (B).

659—16—77179–1

PAGE 6

5. Deductions for Western Hemisphere trade corporations.—In the case of a Western Hemisphere trade corporation, as defined in section 921, there is allowed under section 922, a deduction equal to 26.923 percent of the taxable income of such corporation computed without regard to the deduction provided in section 922. Under the provisions of section 172 (d), this special deduction is not allowed in a year in which a net operating loss occurs.

TAX COMPUTATION INSTRUCTIONS

1. Normal tax.—Section 11 provides a normal tax for taxable years beginning before July 1, 1963, equal to 30 percent of taxable income. In the case of a taxable year beginning after June 30, 1963, the normal tax is equal to 25 percent of taxable income.

2. Surtax.—Section 11 provides a surtax equal to 22 percent of the amount by which the taxable income (computed without regard to the deduction, if any, provided in section 242 for partially tax-exempt interest) exceeds $25,000.

3. Exceptions.—The tax imposed by section 11 shall not apply to a corporation subject to a tax imposed by—(1) section 594 (relating to mutual savings banks conducting life insurance business), (2) subchapter L (section 801 and following, relating to insurance companies), (3) subchapter M (section 851 and following, relating to regulated investment companies), or (4) section 881 (a) (relating to foreign corporations not engaged in business in United States).

4. Change in accounting period.—Under the provisions of section 443 (b) (1) if a corporation changes its accounting period, the taxable income for the short period beginning on the day after the close of the former taxable year and ending at the close of the day before the day designated as the first day of the new taxable year shall be placed on an annual basis by multiplying the amount thereof by 12 and dividing by the number of months in the short period. The tax shall be that same part of the tax computed on the annual basis which the number of months in the short period is of 12 months.

However, taxpayers may elect to compute the tax for the short period according to the method described below if an application to do so is filed not later than the date when (giving effect to any extensions granted) the return for the first full taxable year after the beginning of the short period must be filed. (Section 443 (b) (2).) For details concerning the form and content of such an application, consult your District Director.

If a proper application is filed, the taxpayer may elect to pay whichever tax under the following two methods is greater, in place of the short period tax under section 443 (b) (1): (1) Establish the actual taxable income for the 12 months beginning with the first day of the short period; then compute the tax on that income. Then determine as a short period tax that part of the tax so computed which bears the same proportion to the total tax so computed as the taxable income of the short period bears to the taxable income of the 12 months. However, a taxpayer which distributes substantially all its assets before the end of the 12-month period described above, shall employ in the above computation the 12-month period ending with the last day of the short period. (2) Compute a tax on the taxable income of the short period as if the short period were a full taxable year.

In annualizing income of a short period consisting of 7 days or more, but less than 359 days, by reason of a change to a 52–53-week fiscal year, the annualization is made on a daily basis as provided in section 441 (f) (2) (B) (iii).

5. Consolidated returns.—Section 1503 provides that the tax imposed under section 11 (c) or section 831 shall be increased for any taxable year for which an affiliated group of includible corporations makes or is required to make a consolidated return by 2 percent of the consolidated taxable income (computed without regard to the deduction, if any, provided in section 242 for partially tax-exempt interest). If the affiliated group includes one or more Western Hemisphere trade corporations or one or more regulated public utilities, the increase of 2 percent shall be applied only on the amount by which the consolidated taxable income of the affiliated group exceeds the portion (if any) of the consolidated taxable income attributable to the Western Hemisphere trade corporations and regulated public utilities included in such group.

6. Insurance companies other than life or mutual.—All insurance companies (other than life or mutual insurance companies), including mutual marine insurance companies and mutual fire insurance companies exclusively issuing either perpetual policies or policies for which the sole premium charged is a single deposit, are subject to the taxes imposed by section 11. The taxable income of such insurance companies is defined in section 832 and differs from the taxable income of other corporations. This paragraph does not apply to foreign insurance companies not carrying on an insurance business within the United States. (Section 831.)

7. Life insurance departments of mutual savings banks.—A mutual savings bank not having capital stock represented by shares, authorized under State law to conduct a life insurance business and which conducts such business in a separate department the accounts of which are maintained separately from the accounts of other departments of the bank is taxable under section 594 provided the life insurance department would, if it were treated as a separate corporation, qualify as a life insurance company under section 801.

The tax consists of the sum of—(1) a partial tax computed under section 11 upon the taxable income of the bank determined without regard to any items of gross income or deductions properly allocable to the business of the life insurance department; and (2) a partial tax upon the taxable income (computed as provided in section 802) of the life insurance department determined without regard to any items of gross income or deductions not properly allocable to such department, at the rates and in the manner provided in subchapter L with respect to life insurance companies.

Tax computation.—For the purpose of computing the first partial tax, a mutual savings bank should use Form 1120, filling in all applicable items (except lines 5 and 7) and schedules. The first partial tax should be computed by using lines 1 to 5. For the purpose of computing the second partial tax Form 1120L should be used. The first partial tax should be added to the second partial tax and the sum thereof entered on line 5 as the total income tax. Subtract from line 5 the sum of any credits on line 6 and enter on line 7 the balance of income tax. Form 1120L properly filled in should be attached to and made a part of Form 1120 and properly identified as an accompanying schedule. However, any Form 1120L so used need not be separately executed under the penalty of perjury.

8. Credit for taxes.—If, in accordance with section 901, a credit is claimed by a domestic corporation on line 6 (Tax Computation), page 3, on account of income, war profits and excess profits taxes paid or accrued to a foreign country or a possession of the United States, Form 1118 should be submitted with the return. In case credit is sought for taxes accrued but not paid, the District Director may require a bond on Form 1117 as a condition precedent to the allowance of the credit. For carryback and carryover of a foreign tax credit, see sections 904 (d) and 904 (e).

9. Regulated investment companies.—For provisions relating to the method of taxation of regulated investment companies, see sections 851 through 855.

10. Real estate investment trusts.—For provisions relating to the method of taxation of real estate investment trusts, see sections 856 through 858.

11. Personal holding companies.—Section 541 imposes a tax upon the undistributed personal holding company income (as defined in section 545) of corporations classified as personal holding companies. Every personal holding company must file a schedule 1120PH with its return on Form 1120.

Under the provisions of section 542, a corporation is a "personal holding company" if at least 80 percent of its gross income for the taxable year is personal holding company income as defined in section 543, and if at any time during the last half of the taxable year more than 50 percent in value of its outstanding stock is owned, directly or indirectly, by or for not more than five individuals. (Sections 541–547.)

o59—16—77179-1

PRINCIPAL BUSINESS ACTIVITY AND PRINCIPAL PRODUCT OR SERVICE PAGE 7

In reporting the business code number on page 1, under E, use the list below. Enter the code for the specific industry group from which the largest percentage of "total receipts" is derived. "Total receipts" means gross receipts (line 1, page 1) plus all other income (lines 4 through 10, page 1). Where receipts are derived from two or more of the detailed industry groups listed, code only the one which is the major source of receipts. Use the appropriate code under the heading "FINANCE" if over 50 percent of "total receipts" normally consists of investment income.

On page 3, under P, state the principal business activity and principal product or service which account for the largest percentage of total receipts. For example, if the principal business activity is "construction, special trade contractors," the principal product or service may be "structural steel erectors."

AGRICULTURE, FORESTRY, and FISHERIES

Code

011 Agriculture, forestry, and fisheries.

MINING

Metal mining:
101 Iron ores.
102 Copper, lead, zinc, gold, silver ores.
109 Other metal mining.

121 Bituminous coal and lignite mining.

Crude petroleum and natural gas:
131 Crude petroleum, natural gas, and natural gas liquids.
138 Oil and gas field services.

Nonmetallic mineral and anthracite mining:
141 Stone, sand, gravel.
149 Other nonmetallic minerals, including anthracite mining.

CONSTRUCTION

151 General building contractors.
152 Highway and street construction and heavy construction.
155 Special trade contractors.

MANUFACTURING

Beverage industries:
191 Soft drinks, carbonated waters, and flavoring extracts and sirups.
192 Malt liquors and malt.
194 Wines, brandy, and brandy spirits.
195 Distilled, rectified, blended liquors.

Food and kindred products:
200 Meat products.
201 Dairy products.
202 Canning and preserving fruits, vegetables, and seafoods.
203 Grain mill products.
204 Bakery products.
205 Sugar.
206 Confectionery and related products.
207 Vegetable oil mills and animal, marine, and edible fats and oils.
208 Other food preparations and kindred products.

211 Tobacco manufactures.

Textile mill products:
220 Yarn and thread mills.
221 Broad woven fabric mills, cotton.
222 Broad woven fabric mills, man-made fiber and silk.
223 Broad woven fabric mills, wool: including dyeing and finishing.
224 Narrow fabrics and other small wares mills: cotton, wool, silk, and man-made fiber.
225 Knitting mills.
226 Dyeing and finishing textiles, except wool fabrics and knit goods.
227 Floor covering mills.
228 Other textile goods.

Apparel and other finished products made from fabrics and similar materials:
231 Men's, youths', and boys' suits, coats, overcoats, furnishings, work clothing, and allied garments.
233 Women's, misses', children's, and infants' outerwear and undergarments.
237 Hats, caps, and millinery, fur goods, and other apparel and accessories.
238 Other fabricated textile products.

Lumber and wood products except furniture:
241 Logging camps, logging contractors, and sawmills and planing mills.
243 Millwork, veneer, plywood, and prefabricated structural wood products.
249 Wooden containers and other wood products.

Furniture and fixtures:
251 Household furniture.
259 Office, public building, and other furniture and fixtures.

Paper and allied products:
261 Pulp mills.
262 Paper, paperboard, building paper, and building board mills.
265 Paperboard containers and boxes.
269 Converted paper and paperboard products, except containers and boxes.

Printing, publishing, and allied industries:
271 Newspapers: publishing, publishing and printing.
272 Periodicals: publishing, publishing and printing.
273 Books.
275 Commercial printing, manifold business forms, and greeting cards.
278 Other publishing, bookbinding and related industries, and service industries for the printing trade.

Chemicals and allied products:
280 Industrial inorganic and organic chemicals.
281 Plastics materials and synthetic resins, synthetic rubber, synthetic and other man-made fibers, except glass.
282 Drugs.
283 Soap, detergents, and cleaning preparations.
284 Paints, varnishes, lacquers, enamels, and allied products.
285 Perfumes, cosmetics, and other toilet preparations.
286 Agricultural chemicals.
288 Gum and wood chemicals and other chemical products.

Petroleum refining and related industries:
291 Petroleum refining.
299 Paving and roofing materials and other products of petroleum and coal.

Rubber and miscellaneous plastics products:
301 Tires and inner tubes.
306 Rubber footwear, reclaimed rubber, and other fabricated rubber products.
307 Miscellaneous plastics products.

Leather and leather products:
314 Footwear, except rubber.
319 Leather and other leather products.

Stone clay and glass products:
321 Flat glass, glass and glassware, pressed or blown, and glass products made of purchased glass.
324 Cement, hydraulic.
325 Structural clay products.
326 Pottery and related products.
327 Concrete, gypsum, and plaster prod.
329 Cut stone and stone products and abrasive, asbestos, and other nonmetallic mineral products.

Primary metal industries:
331 Blast furnaces, steelworks, and rolling and finishing mills.
332 Iron and steel foundries.
333 Primary and secondary emelting, refining, rolling, drawing, and extruding of nonferrous metals and alloys.
336 Nonferrous foundries.
338 Other primary metal industries.

Fabricated metal products (incl. ordnance), except machinery and transportation equip.:
340 Metal cans.
341 Cutlery, hand tools, general hardware.
342 Heating apparatus (except electric) and plumbing fixtures.
343 Fabricated structural metal prod.
344 Screw machine products, bolts, nuts, screws, rivets and washers.
345 Metal stampings.
346 Coating, engraving, and allied services.
347 Ordnance and accessories.
348 Miscellaneous fabricated wire products and other fabricated metal prod.

Machinery, except electrical and transportation equipment:
350 Engines and turbines.
351 Farm machinery and equipment.
352 Construction, mining, and materials handling machinery and equip.
353 Metalworking machinery and equip.
354 Special industry machinery, except metalworking machinery.
355 General industrial machinery and equipment.
356 Office, computing, and accounting machines.
357 Service industry machines.
358 Other machinery, except electrical and transportation equipment.

Electrical machinery, equipment, and supplies:
361 Electric transmission and distribution equipment.
362 Electrical industrial apparatus.
363 Household appliances.
364 Electric lighting and wiring equipment.
365 Radio and television receiving sets, except communication types.
366 Communication equipment.
367 Electronic components and accessories.
368 Other electrical machinery, equipment, and supplies.

Transportation equip., except motor vehicles:
371 Aircraft.
372 Aircraft parts.
373 Ship and boat building and repairing.
374 Railroad equipment.
379 Motorcycles, bicycles, and parts and other transportation equipment.

Motor vehicles and motor vehicle equipment:
381 Motor vehicles, passenger car bodies, truck and bus bodies, truck trailers.
384 Motor vehicle parts, accessories.

Professional, scientific, and controlling instruments; photographic and optical goods; watches and clocks:
391 Engineering, laboratory, scientific and research, and measuring and controlling instruments and equip.
393 Optical instruments and lenses, surgical, medical, and dental instruments and supplies, ophthalmic goods.
396 Photographic equip. and supplies.
397 Watches, clocks, clockwork operated devices, and parts.

Other manufacturing industries:
401 Jewelry, silverware, and plated ware.
402 Costume jewelry and costume novelties, except precious metal.
404 Toys, amusement, sporting and athletic goods.
408 Manufacturing not elsewhere classified.

TRANSPORTATION, COMMUNICATION, ELECTRIC, GAS, and SANITARY SERVICES

Transportation:
411 Railroad transportation.
412 Local and suburban transit.
413 Motor freight transportation and warehousing.
414 Taxicabs, intercity passenger transportation, school busses, and other local and interurban passenger transportation.
415 Pipe line transportation.
416 Water transportation.
417 Transportation by air.
418 Transportation services.

Communication:
421 Telephone communication (wire or radio).
422 Telegraph communication (wire and radio).
423 Radio broadcasting and television.
429 Communication services, not elsewhere classified.

Electric and gas companies and systems:
431 Electric companies and systems and combination companies and systems.
432 Gas companies and systems.
441 **Water supply and other sanitary services.**

WHOLESALE TRADE

Groceries and related products:
477 Meats and meat products.
479 Poultry and poultry products, fish and seafoods, and other groceries and related products.

Electrical goods, hardware, plumbing, heating equipment and supplies:
486 Electrical goods.
487 Hardware, and plumbing and heating equipment and supplies.

Other wholesalers:
491 Beer, wine, and distilled alcoholic beverages.
492 Dry goods and apparel.
493 Drugs, chemicals, allied products.
494 Lumber and construction materials.
495 Machinery, equip., and supplies.
496 Motor vehicles and equipment.
497 Farm products—raw materials.
498 Wholesalers, not elsewhere classified.

RETAIL TRADE

521 Food.

General merchandise:
531 Department stores.
532 Mail order houses.
533 Limited price variety stores.
539 Merchandise vending machine operators, direct selling organizations, and other general merchandise stores.

541 Apparel and accessories.

551 Furniture, home furnishings, equipment.

Automotive dealers and gasoline service sta.:
561 Motor vehicle dealers.
565 Tires, batteries, accessories; aircraft, marine, and other automotive dealers.
564 Gasoline service stations.

581 Eating and drinking places.

Building materials, hardware, farm equip.:
591 Building materials.
595 Hardware and farm equipment.

Other retail stores:
601 Drug stores and proprietary stores.
602 Liquor stores.
607 Jewelry stores.
608 Secondhand, book, sporting goods, farm supply, fuel and ice dealers, and other retail stores.

FINANCE, INSURANCE, and REAL ESTATE

Banking:
621 Commercial and stock savings banks, trust companies, and establishments related to banking.
622 Mutual savings banks.

Credit agencies other than banks:
632 Savings and loan associations.
634 Personal credit institutions.
635 Business credit institutions.
638 Other credit agencies.

Holding and other investment companies:
641 Operating holding companies (companies which derived less than 90 percent but more than 50 percent of "total receipts" from investments).
642 Regulated investment companies.
643 Small business investment companies, 1958 Act.
644 Real estate investment trusts.
649 Other investment and holding companies (other companies which derived 90 percent or more of "total receipts" from investments).
651 Security and commodity brokers, dealers exchanges, and services.

Insurance carriers:
661 Life insurance.
662 Mutual insurance, except life or marine, and except mutual fire insurance companies issuing perpetual policies.
669 Other insurance carriers.
671 Insurance agents, brokers, and service.

Real estate:
681 Real estate operators (except developers), and lessors of buildings.
683 Subdividers and developers and operative builders.
684 Agents, brokers, and managers.
685 Title abstract companies.
689 Combinations of real estate, insurance, loans, law offices.

Lessors of real property, except buildings:
692 Mining, oil, and similar properties.
693 Railroad property.
699 Other real property, except bldgs.

SERVICES

701 Hotels, camps, other lodging places.

Personal services:
721 Laundries, cleaning and dyeing.
723 Photographic studios, including commercial photography.
729 Beauty, barber, shoe repair, and pressing shops, funeral and other personal services.

Business services:
731 Advertising.
739 Credit reporting and employment agencies, news syndicates, duplicating, mailing, stenographic, building, and other business services.

Automobile and other repair services:
751 Auto repair services and garages.
759 Other repair services.

Motion pictures:
781 Motion picture production, distribution, and service industries.
783 Motion picture theaters.
791 Amusement and recreation services, except motion pictures.
800 Physicians and surgeons.
801 Other services.

SCHEDULE B.—Taxes paid or accrued to a foreign country or a possession of the United States by (1) a related foreign corporation or (2) a related domestic corporation entitled to the benefits of section 931 or 941 (See instructions).

(1) NAME OF RELATED FOREIGN CORPORATION	(2) YEAR (See inst.)	(3) INCORPORATED UNDER THE LAWS OF (Name of country)	(4) GAINS, PROFITS, AND INCOME OF FOREIGN CORP. FOR YEAR FROM WHICH DIVIDENDS WERE PAID	(5) FOREIGN TAX PAID OR ACCRUED ON GAINS, PROFITS, AND INCOME IN COLUMN (4) (Attach receipt or return)	(6) ACCUMULATED PROFITS (Column (4) minus column (5))	(7) DIVIDENDS PAID BY RELATED FOREIGN CORPORATION	(8) FOREIGN TAX PAID ON ACCUMULATED PROFITS (Column (6) ÷ column (4) × column (5))	(9) TAX DEEMED PAID BY RELATED FOREIGN CORPORATION (Schedule C, column (11))	(10) TOTAL OF COLUMN (8) PLUS COLUMN (9)	(11) TAX DEEMED TO HAVE BEEN PAID (Column (7) ÷ column (6) × column (10))
					TOTAL					

SCHEDULE C.—The following lines are for the computation of taxes deemed to have been paid by a related foreign corporation in respect of dividends from its foreign subsidiary—Column headings same as Schedule B.

* U.S. GOVERNMENT PRINTING OFFICE 1961 O—590046

Instructions for Form 1118

Revised December 1961

(References are to the Internal Revenue Code)

GENERAL INSTRUCTIONS

A. Corporations required to file Form 1118.—Any domestic corporation claiming a credit on Form 1120 for (1) the amount of any income, war profits, and excess profits tax paid or accrued during the taxable year to any foreign country or to any possession of the United States and (2) the taxes deemed to have been paid under section 902 must submit a Form 1118 with its corporation tax return. (Reg. sec. 1.905–2.)

The term "income, war profits, and excess profits taxes" includes a tax imposed by statute or decree by a foreign country or by a possession of the U.S. if (1) such country or possession has in force a general income tax law, (2) the corporation claiming the credit would, in the absence of a specific provision applicable to the corporation, be subject to such general income tax, and (3) such general income tax is not imposed upon the corporation thus subject to such substituted tax. (Reg. sec. 1.903–1(a).)

B. Corporations to whom credit not allowed.—The credit is not allowed to (1) a foreign corporation (882(c)(4)); (2) a China Trade Act corporation (942); (3) a domestic corporation entitled to the benefits of the exemption provided by section 931 for income from possessions of the United States (931(g)); and (4) a regulated investment company which has exercised the election under section 853. (Reg. sec. 1.901–1.)

C. Taxes against which credit not allowed.—The credit for taxes shall be allowed only against the normal tax and surtax for income tax imposed by chapter 1 but shall not be allowed against the following taxes: (1) the tax on accumulated earnings imposed by section 531; (2) the personal holding company tax imposed by section 541; and (3) the additional tax relating to war loss recoveries imposed by section 1333. (Reg. sec. 1.901–1(f).)

D. Deduction denied if credit claimed.—If a corporation elects with respect to any taxable year to claim a credit for taxes to any extent, such election shall apply to income, war profits, and excess profits taxes paid or accrued in such taxable year to all foreign countries and possessions of the United States, and no portion of any such taxes shall be allowed as a deduction from gross income in such taxable year or any succeeding taxable year. (164(b)(6) and Reg. sec. 1.901–1 (c).) Such election for any taxable year may by made or changed at any time prior to the expiration of the period prescribed for making a claim for credit or refund of the tax imposed by chapter 1 for such taxable year. (Section 901.)

E. Method of reporting.—All amounts furnished on the form shall be expressed in U.S. dollars except as provided in Schedule A, column 6(a). In all instances where it is necessary to convert from foreign currency attach a statement describing in reasonable detail why and how the particular rate was determined.

F. Taxes of foreign corporation.—(a) ***Domestic corporation owning stock of a foreign corporation.***—In the case of a domestic corporation owning at least 10 percent of the voting stock of a foreign corporation from which it receives dividends in any taxable year, a proportionate amount of the taxes paid or accrued by such foreign corporation are deemed to have been paid by the domestic corporation for purposes of the foreign tax credit. (Section 902(a).) For computation of taxes deemed paid by the domestic corporation, see Schedule B.

(b) ***Foreign corporation owning stock of another foreign corporation.***—If any foreign corporation in (a) above owns 50 percent or more of the voting stock of another foreign corporation from which it receives dividends in any taxable year, it shall be deemed to have paid a proportionate amount of the foreign taxes of such foreign subsidiary. (Section 902(b).) For computation of taxes deemed paid by a related foreign corporation, see Schedule C.

(c) ***Source of income of foreign subsidiaries and country to which tax is deemed to have been paid.***—For the purpose of section 904(a), dividends of a foreign corporation (at least 10 percent of whose voting stock is owned by a domestic corporation) shall be deemed to have been derived from sources within the foreign country or possession of the United States in which such foreign corporation is incorporated, to the extent thot under section 862(a)(2) such dividends are treated as income from sources without the United States. In addition, all income, war profits, and excess profits taxes paid or deemed to have been paid by such foreign corporation to any foreign country or possession of the United States shall be deemed to have been paid to the country or possession under whose laws such foreign corporation is incorporated. (Reg. sec. 1.902–1(c).)

(d) ***Corporation treated as foreign.***—The term "foreign corporation" as used above includes a domestic corporation entitled to the benefits of section 931 or 941. (Section 901(c).)

G. Limitation on credit.

(1) Alternative limitations.

(a) ***Per-country limitation.***—In case of any taxpayer who does not elect the overall limitation, the amount of the credit in respect of the tax paid or accrued to any foreign country or possession of the United States shall not exceed the same proportion of the tax against which such credit is taken which the taxpayer's taxable income from sources within such country or possession (but not in excess of the taxpayer's entire taxable income) bears to his entire taxable income for the same taxable year. (Section 904(a) (1).)

(b) ***Overall limitation.***—In the case of any taxpayer who elects the overall limitation, the total amount of the credit in respect of taxes paid or accrued to all foreign countries and possessions of the United States shall not exceed the same proportion of the tax against which such credit is taken which the taxpayer's taxable income from sources without the United States (but not in excess of the taxpayer's entire taxable income) bears to his entire taxable income for the same taxable year. (Section 904(a) (2).)

(2) Election of overall limitation.

(a) ***In general.***—A taxpayer may elect the overall limitation for any year beginning after December 31, 1960. The election shall remain in effect for all subsequent taxable years, except that it may be revoked with the consent of the Commissioner with respect to any taxable year.

(b) ***Election after revocation.***—If a taxpayer has elected the overall limitation and such election has been revoked, such taxpayer shall not be eligible to make a new election of the overall limitation for any taxable year, unless the Commissioner consents to such new election.

(c) ***Time of election and revocation.***—An election with respect to any taxable year may be made or, if made, may be revoked at any time before the expiration of the period prescribed for making a claim for credit or refund of U.S. income tax imposed for such taxable year.

H. When credit for taxes may be taken.—The credit may ordinarily be taken either in the return for the year in which the taxes accrued or in which the taxes were paid, depending upon whether the accounts of the corporation are kept and its returns filed upon the accrual method or upon the cash receipts and disbursements method. Section 905(a) allows the corporation, at its option and irrespective of the method of accounting employed in keeping its books, to take such credit for taxes as may be allowable in the return for the year in which the taxes accrued. An election thus made under section 905(a) must be followed in returns for all subsequent years, and no portion of any such taxes accrued in a year in which a credit is claimed will be allowed as a deduction from gross income in any year. (Reg. sec. 1.905–1(a).)

If, however, under the provisions of the regulations under section 461, an amount otherwise constituting gross income for the taxable year from sources without the United States is, owing to monetary, exchange, or other restrictions imposed by a foreign country, not includible in gross income of the taxpayer for such year, the credit for income taxes imposed by such foreign country with respect to such amount shall be taken proportionately in any subsequent taxable year in which such amount or portion thereof is includible in gross income. (Reg. sec. 1.905–1(b).)

I. Credit for taxes accrued but not paid.—In the case of a credit sought for a tax accrued but not paid, the district director may, as a condition precedent to the allowance of a credit, require a bond, Form 1117, from the taxpayer. If such a bond is required, it shall be in such sum as the Commissioner may prescribe and shall be conditioned for the poyment by the taxpayer of any amount of tax found due upon any redetermination of the tax made necessary by such credit proving incorrect, with such further conditions as the district director may require. (Reg. sec. 1.905–4.)

SPECIFIC INSTRUCTIONS FOR SCHEDULES

SCHEDULE A

Column 2.—Both date of accrual of the tax and date of payment (if paid) must be given.

Column 3.—Enter type of tax (income, war profits, or excess profits).

Column 4.—Statute imposing tax should be named fully and clearly so as to be easily identified.

Column 5.—Taxable income or loss from foreign sources or possessions of the United States shall be stated in U.S. dollars. Include all income taxable (or losses allowable) by the U.S. whether or not taxable (or allowable) by the foreign country or U.S. possession. Computation of taxable income from sources without the United States must be made in accordance with sections 861 through 864. If the overall limitation is elected, all income from sources without the United States is taken into account. Thus income which is from sources without the United States but not from sources within any foreign country or possession of the United States (for example, high seas income) is not taken into account under the per-country limitation but is taken into account under the overall limitation. Where such income is taken into account it should be properly identified and shown on the schedule. For special rule for gross income from sources without the United States in case of dividends from a foreign corporation 50 percent or more of whose gross income is received from sources within the United States, see section 1.861-3(a)(2) of the Regulations. For special rule for certain wholly owned foreign corporations, see section 902(d).

Column 6.—Include tax withheld at source on dividends and other tax paid or accrued exclusive of tax deemed to have been paid or accrued by a related foreign corporation as shown in Column 7.

Column 6(a).—State the amount in the currency of the foreign country (e.g., pounds, francs, marks).

Column 6(b).—Give the rate of exchange used and attach a statement describing in reasonable detail why and how this particular rate was determined.

Column 7.—If per-country limitation is elected, enter the tax deemed to have been paid to the individual foreign country or U.S. possession from Schedule B. If the overall limitation is elected, enter on the total line the total tax deemed to have been paid to all foreign countries and/or U.S. possessions from Schedule B.

Column 8.—Attach separate schedule showing computation of carryback or carryover. If the per-country limitation has been elected, a separate computation and entry will be necessary for each country. If the overall limitation is elected, enter the total carryback or carryover on the total line.

For taxable years beginning after December 31, 1957, taxes paid or accrued to any foreign country or United States possession which are in excess of the applicable limitation may be carried back 2 years and carried forward 5 years. The excess amount must first be applied to the earliest of the 7 taxable years to which it may be carried, then to the next earliest year, etc., except that no carryback can be made to any taxable year beginning before January 1, 1958. Such excess may not be carried from a per-country year to an overall year or from an overall year to a per-country year. However, where a taxpayer has elected to change the method of computing the limitation, the year in which the alternative method has been used is counted in determining the available years of carryback or carryover.

Where the corporation has used a deduction instead of a credit in any taxable year to which the carryback or carryover is carried, the carryback or carryover is to be considered used in such year in the same manner as though the corporation had claimed the tax credit, instead of a deduction, but no credit is allowed for the amount so used.

Column 9.—If the per-country limitation is elected, then Columns 6(c), 7, and 8 must be totaled across line by line. If the overall limitation is elected, use only total line.

Column 10.—If the per-country limitation is elected, enter on each line for each country for which the credit is claimed the total U.S. income tax reported on Form 1120. If the overall limitation is elected, enter such amount on the total line only.

Column 11.—If the per-country limitation is elected, enter on each line for each country for which the credit is claimed the taxable income from all sources as reported on Form 1120. If the overall limitation is elected, enter such amount on the total line only.

Column 12.—If the per-country limitation is elected, the ratio of foreign income (Column 5) to taxable income from all sources (Column 11) must be computed for each country. If the overall limitation is elected, the ratio is computed on the total line only. However, in computing such ratio the numerator shall not exceed the denominator. See General Instruction G.

Column 13.—If the per-country limitation is elected, the limitation must be computed for each country. If the overall limitation is elected, the limitation is computed on the total line only. For special rule for application of foreign tax credit when overall limitation applies with respect to a consolidated return if the affiliated group includes a Western Hemisphere trade corporation, see section 1503(d).

Column 14.—If the per-country limitation is elected, enter for each country the amount in Column 9 or Column 13 whichever is less. The foreign tax credit to be claimed on Form 1120 will be the total of the individual credits in Column 14. If the overall limitation is elected enter on the total line the amount in Column 9 or Column 13 whichever is less. This is your foreign tax credit to be claimed on Form 1120.

SCHEDULE B

Column 2.—If dividends are paid from the gains, profits and income of more than 1 year then the tax deemed to have been paid by the domestic corporation must be computed and shown on a separate line for each year.

Column 4.—The gains, profits and income to be entered is determined by the gains, profits and income from all sources whatsoever, whether subjected to foreign tax, for the year from which the dividends (Column 7) were paid. Include all dividends received from a foreign subsidiary of the related foreign corporation. In making such determination, all dividends which are paid in the first 60 days of any year shall be treated as having been paid from the gains, profits and income of the preceding year, and in other respects such dividends shall be treated as having been paid from the most recent gains, profits and income. The conversions to dollars must be made at the same exchange rate as that used for dividends in Column 7.

Column 5.—Enter the amount of foreign tax paid on the amount of gains, profits and income entered in Column 4.

Column 7.—Enter the amount of dividends paid by the related foreign corporations to the domestic corporation.

Column 9.—Enter the amount from Schedule C, Column 11.

Column 11.—If the per-country limitation is elected, the amount which has been entered in this column should be carried to Schedule A, Column 7 and entered on line with the country or United States possession in respect of which a credit is claimed. If the overall limitation is elected, the total taxes deemed to have been paid should be entered on the total line of Schedule A, Column 7.

SCHEDULE C

If a foreign corporation in Schedule B owns 50 percent or more of the voting stock of another foreign corporation from which it receives dividends, then Schedule C must be filled in to determine the amount of tax deemed to have been paid by the foreign corporation.

Columns 1 through 6.—Same instructions as Schedule B.

Column 7.—Enter the amount of dividends paid by the subsidiary of the related foreign corporation to the related foreign corporation.

Column 10.—Carryover amount from Column 8.

Column 11.—Carry amount of tax deemed to have been paid to Schedule B, Column 9 on line with controlling foreign corporation. If dividends are paid from the gains, profits and income of more than 1 year, then the tax deemed to have been paid by the related corporation must be computed separately for each year.

U.S. GOVERNMENT PRINTING OFFICE: 1962—O-590045

FORM 2952

(Rev. Feb. 1962)

U.S. Treasury Department
Internal Revenue Service

INFORMATION RETURN BY A DOMESTIC CORPORATION WITH RESPECT TO CONTROLLED FOREIGN CORPORATIONS

(Under Section 6038 of the Internal Revenue Code)

For Calendar Year 19.....

or other taxable year beginning ....., 19....., and ending ....., 19.....

To Be Filed in Duplicate

Name of domestic corporation | Employer Identification No.

Address

The following information must be submitted on a separate Form 2952 for each Controlled Foreign Corporation and for each Foreign Subsidiary of a Controlled Foreign Corporation (See instructions)

1. Name of foreign corporation or its foreign subsidiary

2. Address

3. Indicate whether this return is filed with respect to:
   - ☐ (a) Controlled Foreign Corporation or
   - ☐ (b) Its Foreign Subsidiary

4. If this return is filed with respect to a Foreign Subsidiary, give name and address of Controlling Foreign Corporation

5. Principal place of business

6. Principal business activity and Code No. (See page 8, Form 1120 instructions)

7. Date of incorporation

8. Country under whose laws incorporated

9. (a) Description of each class of stock

(b) Number of shares of each class outstanding—

at the beginning of the annual accounting period	at the end of the annual accounting period

10. The following information must be submitted for each citizen or resident of the United States and each domestic corporation who is a shareholder of record owning at any time during the annual accounting period 5 percent or more in value of any class of outstanding stock (If more space is needed attach a supplemental schedule):

(a) NAME OF SHAREHOLDER	(b) ADDRESS	(c) CLASS OF STOCK	(d) NUMBER OF SHARES HELD

11. (a) Gross receipts	(b) Net profits before taxes	(c) Foreign income taxes
$	$	$

12. *Enter a summary showing the total amount of each of the following types of transactions which took place during the annual accounting period, with the domestic corporation or any shareholder of the domestic corporation owning 10 percent or more of the value of any class of stock outstanding of the domestic corporation (attach additional sheets if necessary):

	Domestic Corporation	10 percent or more shareholder
(a) Sales of stock in trade	$	$
(b) Purchases of stock in trade	$	$
(c) Purchases of depreciable property	$	$
(d) Compensation paid for the rendition of technical, managerial, engineering, construction, scientific, or like services	$	$
(e) Compensation received for the rendition of technical, managerial, engineering, construction, scientific, or like services	$	$
(f) Commissions paid	$	$
(g) Commissions received	$	$
(h) Rents and royalties paid	$	$
(i) Rents and royalties received	$	$
(j) Amounts loaned (other than open accounts which arise and are collected in the ordinary course of business)	$	$
(k) Amounts borrowed (other than open accounts which arise and are collected in the ordinary course of business)	$	$
(l) Dividends paid	$	$
(m) Dividends received	$	$
(n) Interest paid	$	$
(o) Interest received	$	$
(p) Premiums received for insurance or reinsurance	$	$

*If the domestic corporation is a bank, as described in section 581, or is controlled within the meaning of section 368(c) by a bank, the term "transactions" shall not, as to a corporation with respect to which a return is filed, include banking transactions entered into on behalf of customers; in any event, however, deposits in accounts between a controlled foreign corporation or a foreign subsidiary and the domestic corporation or a 10 percent shareholder and withdrawals from such accounts shall be summarized by reporting end-of-month balances.

13. Financial Statements. The following information with respect to each controlled foreign corporation and each foreign subsidiary shall be attached to and filed as part of this return, and shall be prepared in conformity with generally accepted accounting principles, and in such form and detail as is customary for the corporation's accounting records:

(a) A statement of the corporation's profit and loss for the annual accounting period;

(b) A balance sheet as of the end of the annual accounting period of the corporation showing—
(1) The corporation's assets,
(2) The corporation's liabilities,
(3) The corporation's net worth;

(c) An analysis of changes in the corporation's surplus accounts during the annual accounting period including both opening and closing balances.

14. Exchange rate used ..... (If more than one rate is used, attach statement.)

INSTRUCTIONS

REQUIREMENT OF RETURN.—For taxable years beginning after December 31, 1960, every domestic corporation shall make a separate annual information return on Form 2952, **in duplicate**, with respect to each controlled foreign corporation and each foreign subsidiary for the annual accounting period of each such controlled foreign corporation or foreign subsidiary beginning after December 31, 1960.

CONTROL.—A domestic corporation shall be deemed to be in control of a foreign corporation if at any time during its taxable year it owns more than 50 percent of the voting stock of such foreign corporation.

FOREIGN SUBSIDIARY.—A foreign corporation more than 50 percent of the voting stock of which is owned by a controlled foreign corporation at any time during the annual accounting period of such controlled foreign corporation shall be considered a foreign subsidiary.

PERIOD COVERED BY RETURN.—
(1) **Controlled Foreign Corporation.** The information with respect to a controlled foreign corporation shall be furnished for its annual accounting period ending with or within the domestic corporation's taxable year.
(2) **Foreign Subsidiary.** The information with respect to a foreign subsidiary shall be furnished for such subsidiary's annual accounting period ending with or within the controlled foreign corporation's annual accounting period.

METHOD OF REPORTING.—All amounts furnished in this return shall be expressed in United States dollars.

TIME AND PLACE FOR FILING RETURN.—Returns on Form 2952 shall be filed with the domestic corporation's income tax return on or before the fifteenth day of the third month following the close of such corporation's taxable year. An application by a domestic corporation for an extension of time for filing a return of income shall also be considered as an application for an extension of time for filing returns on Form 2952.

PENALTIES.—The information required by section 6038 of the Code must be furnished even though there are no foreign taxes which would be reduced. For criminal penalties for failure to file a return and filing a false or fraudulent return, see sections 7203, 7206, and 7207 of the Code.

EFFECT ON TAX CREDIT.—Failure to furnish any information required by section 6038 will result in a 10 percent reduction in the foreign taxes of all controlled foreign corporations and their foreign subsidiaries which are taken into account when figuring the credit under section 902. If such failure continues for 90 days or more after written notice by the District Director, these taxes are further reduced an additional 5 percent for each 3-month period or fraction thereof, during which such failure continues after the expiration of the 90-day period.
